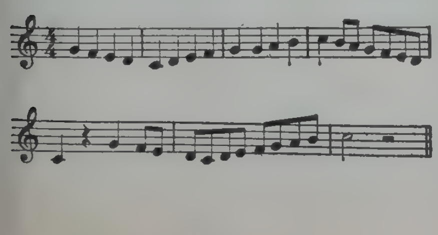
"The first step is the management of the breath. Every note must be supported from the region of the diaphragm with the degree of pressure that it demands, not for itself alone, but in its relation to its neighbors and the true gradation of the entire series. The higher the pitch of the note the greater the degree of pressure required, and vice versa; the ear and the sense of volume must combine to secure and preserve the even gradation of the scale up or down. The great point is to make sure of the identity of the tone.

"It is not necessary to begin either at the top or the bottom of a scale. The old Italians were wise enough not to enforce an arbitary rule on this point. Their plan (adopted also in Paris by the great singer and teacher, Faure) was to find the best note in the middle of the voice and use it as the pivot on which to balance the two halves of the scale lying above and below it. In this way they had less difficulty in obtaining an even scale and a smooth legato.

"This device is so effective that many years ago I invented for the study of it a form of rhythmical slow scale in three sections, each commencing on the dominant. The key must be varied so that the dominant in every case may afford the safest model for the succeeding notes:



"This slow scale must be sung with the dark or 'closed' tone (*voix sombre*), whereas quick scales and runs are best executed in the bright or 'open' tone (*voix claire*), which lends itself more readily to passages requiring flexibility.[2]

"Just as the dominant or initial note supplies the model for the others, so must the breathing of the descending scale be imitated in the ascending scale (not the reverse). The legato is always easier, neater, and to be employed with better gradation on the down scale—certainly at first.

"The point is that, whether the voice be mounting or descending the scale, the same note shall always be sung in the same manner; that the 'pivot' tone, when returned to or sung in passing, shall invariably sound quite the same.

"The ability, however, to manage this depends upon the correct blending of the registers, an important matter upon which I can only touch briefly here. Unless the differences of sensation and changes of mechanism which characterize what are known as the 'registers' of the human voice have so merged into each other as to create a harmonious whole, smoothness of scale or legato singing is out of the question.

"The provision of registers, with their three different mechanical actions, enables the same vocal cords to produce a succession of sounds of extensive range. They thus add to what might otherwise be a relatively limited compass and provide for an infinitely greater variety of timbres. Until Manuel Garcia discovered and invented the laryngoscope, the nature of these different mechanisms was not understood; the effect was known, but not the cause. From close observation, however, one fact appears—that we must not alter our manner of singing because we feel the mechanism to be in some subtle way altering its automatic procedure. Interference is bound to entail disaster.

"The solution of the problem lies in uniformity—uniformity of breathing, of 'singing position,' of resonance—the last is perhaps the most important. So long as the voice is securely reflected in its ultimate forward position and is sustained there by the breath, supported from the diaphragm, the vocal cords will enjoy the elasticity and freedom essential for modifying their action, without sudden change or 'break' which is commonly heard. Otherwise the modification cannot be made imperceptibly, and the abrupt transition from one register to another will become audible. The blending tone, if properly graduated, extends over three or at most four notes, to which the French give the name of *voix mixte*.[3]

"With the aid of this *voix mixte*, the union of the 'chest' and 'medium,' of 'medium' and 'head' tones, proceeding either up or down the scale, the voice can be brought into line throughout its whole compass. Once the uniformity is achieved the secret of the legato, elusive as it may appear, becomes comparatively clear. The eclectic ear of the singer must do the rest.

(*f*) The Portamento

"The portamento resembles the legato, only in its execution the carrying of the voice is made audible over the interval separating the two notes.

"The mastery of the portamento is not more elusive than that of the legato; but its application to a musical phrase, the

---

[2] Both formations are shown with diagrams and described in *Hints on Singing*, p. 11.

[3] The finest exercise I know for obtaining clearness and uniformity of tone in the medium register is that which Garcia gave to Jenny Lind when she went to him in Paris in 1841, to "mend her worn and uneven voice." It will be found on p. 16 of *Hints on Singing*. It is not to be used merely as a remedy, but as a study for maintaining a ringing quality of tone on the descending scales, and at the same time preparing the way for a natural pure legato.

IVERS & POND
PIANOS

Outstanding Quality

The sterling structural integrity, delightful tone and artistry of design and finish found in every *Ivers & Pond* mark our smallest (five foot Colonial) grand, shown above. Send for our catalogue picturing this and other latest styles.

Ivers & Pond
PIANOS

are used in over 500 Educational Institutions and 70,000 homes. Built today, as from the first, in *but one quality—the best*—with continuity of proprietorship and of artistic ideals, they represent the farthest advance in fine piano building. Every intending buyer should have our catalogue. *Write for it.*

How to Buy

Where no dealer sells IVERS & POND pianos we quote lowest prices and ship from the factory tho' your home be in the most remote village in the United States. Attractive, easy payment plans. Liberal allowance for old pianos in exchange. Every intending buyer should have our new catalogue. *Write for it.*

WILDER MASTER PIANO COURSES

These Courses were written because of the universal demand for ***concise, thorough and workable*** Courses in the most practical departments of piano playing

You are sure to feel the need of some of these Courses sooner or later. In fact, you will find it an excellent investment of time and money to own the Full Set. But first let us tell you more about them, and also about our Introductory Offer.

An addressed Post Card will bring full information
The Wilder Publishing Company Dept. E-6 West Newton, Mass.

choice of a right mode of executing it, and various other considerations which musical feeling and experience alone can satisfy, combine to make it the more subtle and difficult device of the two. In the singing of Mozart both play an exceedingly important part.

"The English word 'slur' is capable of too many interpretations, and has not the same precise significance as the Italian *portamento* or the French *port de voix*. These imply a mode of carrying the voice which, if employed gracefully and in the right place, always adds character, elegance, force, or intensity of expression, to the delivery of a phrase. Without one of these purposes in view it had better not be used. But, correctly to fulfill the traditions of the Italian school, it cannot be dispensed with.

"To enhance the elegance of a phrase, the portamento should as a rule be lightly sung. Merely pushing the voice up or dropping it down from note to note deprives the device of all charm. The tone must be delicately poised and supported by the breath; it must likewise be carried without jerk or interruption over the whole of the interval, attaining its goal with perfect intonation and quality. Correct breath-pressure and intelligent anticipation of resonance will alone make this possible.

"To import the declamatory force or vigor of sentiment, the portamento should be employed with an energy and directness that leaves no doubt as to its object, yet always with the greatest discretion. The intention of the composer must be carefully studied, and this in the case of Mozart will scarcely leave room for mistaken zeal or choice of the wrong place. The portamento is not invariably indicated, but where it is not, tradition and taste enable us to mark the spot.

. . . .

"As an ordinary device for adding sentiment to the music, the portamento has been exaggerated and overdone to an extent that has created a prejudice against its use at any point. That, of course, is absurd, like most objections that go to an extreme. Sixty years ago the excessive use of the portamento was. unknown. The great singers used it in just the right measure and no more; they made it rare enough for the ear to be grateful for its charm, never 'slurring' two or three intervals in succession nor spreading the tone up and down with sickly heaviness. I remember the period when the exaggeration gradually set in. The song-writers of the eighties were as much responsible for it as the singers, one of the most popular of them, Grieg, suffering from an inordinate love of portamento, as his songs show.

"Then began a reaction. The more cultivated English audiences became familiar with the Passion-music and cantatas of Bach, and learned to appreciate the proper reticence in this matter. They began to enjoy a final cadence without the customary upward or downward *glissade* to the concluding note. Musicians perceived that the artistic singers were imitating the grace, perception, and restraint of players of the violin or the violoncello like Joachim, Sarasate, Ysaye, Lady Halle, Hollman, Hausmann, and Piatti, who were the right models from whom to acquire them.

(*g*) The Messa di Voce

"The English meaning of this curious term is naively but accurately defined by Garcia in *Hints on Singing*. The *messa di voce*, he says, stands for the process of singing 'swelled sounds,' which should 'begin pianissimo and by degrees acquire increasing force till they arrive at their loudest, which should happen at half their length; then the process should be reversed.'

"The apparently simple act of swelling and diminishing tone, not alone on single notes but on sentences or phrases, is the central characteristic of the old Italian school. The mastery of the 'straight line' must come first, as it would precede that of the 'curve' in drawing. But one does not suffice without the other—above all in the singing of Mozart, who demanded the *messa di voce* at nearly every turn of every piece that he wrote for the voice.

"Here, once more, it is diaphragmatic breathing that enables the singer to accomplish the well-directed support of a steady tone while swelling or diminishing the strength and volume with perfect evenness and regularity of gradation.

"The action of the *messa di voce* becomes, with practice, mechanical and subconscious. The utmost care is therefore needed in the exercise of a dynamic force that is liable to over-assertion and to produce a certain monotony of style. It may be constantly used, but only if guided by ease and economy of breath-pressure, coupled with musical intelligence.

"A Mozart singer who does not possess this gift, would, in my judgment, be an anomaly.

(*h*) Agility, Coloratura, Ornaments, Etc.

"It is a common belief that only light voices are fitted by nature for the execution of florid or *coloratura* music. That is a misapprehension which has only grown up in recent times, and did not prevail among the old teachers, because their pupils, even those with the heaviest organs, were continually demonstrating the opposite. Bach and Handel, Mozart and Rossini, wrote many passages that are *tours de force*, it is true; but, generally speaking, the former did not write their runs and 'divisions'. or the last-named his brilliant passages and cadenzas, for what they would have called exceptional voices. They wrote them indiscriminately for singers of every calibre—and for basses and contraltos as much as for sopranos and tenors.

"The basis of all flexibility is the pure vocalization of the quick scale upon the bright tone, or *voix claire*. In order to be able to sing clearly, evenly, and rapidly an octave or two of notes, one must be able to do the same thing on two, three, or five notes. That means careful and constant practice with correct breathing and mechanism, adequate resonance, a true ear, freedom from muscular rigidity of the throat or larynx, and the natural impulse which imparts ease and abandonment to the steady, effortless flow of tone.

"The free oscillation of the tone from note to note necessary for the preparation of the quick scale is also the right beginning for the practice of the shake or trill. But when more than two notes are attempted the larynx does not oscillate; the voice glides smoothly over the group with a slight accent upon each note, so that, no matter how rapid the movement, the singing of the scale becomes clear, definite, flexible, and of even strength throughout.

"The main factor in the attainment of this lightness, elasticity, and accuracy is the supreme controlling action of the breath, working in complete accord with mind and ear. To sing scales crisply and clearly we must be able to *think* them in perfection.

"Similar rules apply to the practice of runs (or 'divisions') which form perhaps the most characteristic and persistent feature of Italian music of the seventeenth and eighteenth centuries. The mastery of these is the key to every branch of florid singing. They provide the groundwork for all vocal agility, for the ease and brilliancy of rendering which alone justifies the survival of this class of music.

"Apart from smoothness and beauty of tone, a clear accentuation of the various rhythms is extremely important. Usually the accent falls upon the first note of a group of four, six, or eight notes, but the singer must be able to place it anywhere without interfering with the rhythm and clarity of the run. Nothing can be worse than triplets sung with a slurred and indistinct middle note, except perhaps a jumbled 'turn' of which the final note is not audible.

"In the singing of Mozart, correctly-marked rhythms—he has such an extraordinary variety of them—constitute a vital feature, notably in the concerted music of the operas and in the play between solo voice and orchestra. The ability to observe peculiar or divergent rhythms, in addition, is frequently essential in passages where agility is also called for. The study of one should therefore go hand in hand with the other; though naturally the scales and runs have to be mastered first.

"With Mozart's special *ornamentations,* the point is that he treats the various types of ornaments, not as mere embellishments, but as integral parts of the composition. He thus enhances their dignity and makes their faultless execution of equal importance with that of the main melody.

"The master had his favorite 'ornaments.' Grace notes simply abound in his music: turns (*gruppetti*), *appoggiature,* repeated and staccato sounds, shakes, slurred notes (*notes coulees*) constantly arrest the attention of the student. One and all demand the utmost purity and flexibility of voice and delicacy and finish of execution.

"Mozart was especially fond of *notes, coulees* which are very difficult to sing really well. They belonged rather to the technic of the violin or the 'cello than of the voice. Two gliding notes to a single 'up or down bow' are comparatively easy to play (compare the semiquaver passages in the *Tannhauser* overture); but two notes to a syllable for a few bars in succession present a greater difficulty to the singer because of the certainty, smoothness, and grace that are demanded of the executant, who should here closely imitate the violin.

"At the root of the matter lies the command of agility, and every student of this art who works diligently enough can be trained to become a more or less accomplished singer of florid music."

Interesting Letters from Our Readers

A Stage Fright Episode

To the Etude:

I was much interested in the different opinions on "Stage Fright," as presented in the Etude symposium of some months ago. Its "cure," if there is such a thing, had a special appeal. There was brought to me an experience which might be at least amusing to others who may read.

Several years ago, having accepted a position in a prominent church attended by many celebrities and professional people, I suffered severely from stage fright, or its equivalent.

One beautiful summer morning the church was packed, and among the congregation came a handsome, distinguished-looking man accompanied by a charming woman.

As the service progressed, I noticed in the mirror that the man never took his eyes off the organ. As I had not been in the position long, I became very nervous, imagining that he was a critic. By the close of the service I was near a collapse.

While leaving the church, I spoke to a prominent member, asking who was the distinguished man who never took his eyes off the organ.

"Why, don't you know that is Mr. J.—of the very prominent family of that name? He has lost his mind, and the lady is always with him, as he is not allowed to go out alone."

My tumble was big, but effective. Needless to say, my cure was complete.

Nora Cassady, Connecticut.

A Musical Party Surprise

To the Etude:

For a novel entertainment at a Pupils' Party, I found this feature a great success.

One of the smaller girls came early and was enclosed in a very large pasteboard box. Any chain store will have one. She was seated comfortably and then the top enclosed with crepe paper glued tight to each side. Also, sides were decorated with the same.

When all the pupils had arrived and were in their seats, conversing at ease, I clapped my hands and the girl in the box broke through the top and recited this:

Hello, everyone! I'm glad all are here;
  I offer to each one a lot of good cheer;
You see here the spirit that hovers around
  If no one is near to observe how you sound
When you practice or study or even sight-read;
  And that all scales are given the care that they need.

Always have patience, and always go slow;
  The more that you do this, the more you will know.
Don't forget I am near to note all that you do,
  And that if it is wrong the hurt falls back on you.
So good-bye, now you've seen me; take care, if you please,
  To do pieces right and you'll get them with ease.

R. Durand, Philadelphia.

Wants More Recognition for 'Cello

To the Etude:

In the last Etude appeared an article by Mr. Alterman, lamenting the small part the 'cello plays in the phonograph world. Violin records are there in profusion and of the most brilliant kind.

Contrasting with this, just please take up your talking machine catalog and see what is offered you for the 'cello; not one concerto in the lot; and only about thirty in the whole book. Of these nine out of ten are of a very sombre character; and not one that makes any serious pretention to real brilliancy.

The 'cello is not dependent upon tone alone; just as wonderful things can be done with it as with the violin. When some 'cellist wakes up to the fact that people will not buy this dull, uninteresting stuff, and give us what we want to listen to, there will be no trouble about the buying public appreciating 'cello records, and this the moment they are worth while.

W. A. Wilson, Arlington, Nebr.

KIMBALL

"The Instrument of Yesterday, Today and Tomorrow"

PROFESSIONAL APPROVAL of Kimball pianos has been continuous throughout the years since they were first manufactured.

Today increasing numbers of educators enthusiastically praise the new Kimball scale, the latest development in scientific piano building.

These principles are embodied in the "little" Grand or the "tiny" Upright, both especially suited to the studio or home of limited space. They possess beauty of tone with a volume usually associated only with larger instruments.

See and know the Kimball from these small styles to the largest Concert Grand.

The Organist's Etude

It is the Ambition of THE ETUDE to make this Organ Department "An Organist's Magazine Complete in Itself"

Edited by Well-Known Specialists

Value of the Organist to His Community

By Herbert Stavely Sammond

[Paper presented by the well-known Brooklyn organist and choral conductor at Convention of National Association of Organists, Rochester, N. Y.]

EVERY organist should be a leader or a leading factor for the advancement of music in his community, independently and outside of his church. While his position in the church should have a certain value to any musical work in which he may be engaged on the outside, he should aid the cause of music through other channels besides those within the church.

What can be done and what is the way to go at it?

There are so many things he can do and so many ways of going at them that only a few can be mentioned here by way of suggesting others.

He should, in co-operation with other enthusiasts, organize a chorus or singing club. It matters not whether it be of men, women or children, or all three combined, so long as it is of value to the community, as it naturally would be.

To organists and pianists who have never done this type of work, and are not sure they could, I would say, as you play music in three or four parts on piano or organ and listen to each voice in its correct relation to the other for the proper blending of all the parts, you can do the same with voices. If you haven't done it and want to learn how, go to it and you will soon learn.

A Men's Singing Club

If the field in your own community is only partly covered by having a mixed and a women's chorus, then organize the men into a singing club. If there is no women's chorus and there is one of mixed and male voices, try that or a children's choir. If you find the field fully covered in your immediate community and you feel it would be unwise to organize one of the kind already established, go outside and find a place where there is no singing club and stir up one. If there is any community anywhere, in city or town, without a singing club of some sort, such a place needs stirring up. There should be a male, a female, a mixed and a children's choir in every community. Its value to all concerned is too obvious and needs only an enthusiastic musician to bring it about. Why not be that one? Some organists may feel that they cannot give the time or have not the time to give to it. To such I would say: You have the time if you are only willing to use it that way. Few, if any, are so crowded with pupils as to be obliged to teach morning, noon and night. If there are any such, my advice is to cut out some of the teaching before your health or your doctor tells you to vary your activities more by engaging in some work of this kind.

Now Let's All Sing

The work requires just the sort of training and knowledge an experienced organist is supposed to possess, with certain other qualifications that require only exercising for development, and not the type of leader whose only qualification is a good singing voice. There has been too much of this type of song leading in community work since the world war, and the need or excuse for it ceased with the war. This is one of the reasons community singing has not reached a higher standard and commanded the respect and support of more of the best musicians. Any singer with a robust voice, possessing little or no knowledge of music, with the right personality, can get away with a certain type of "Now let's all sing" community song leading. During the war one of the duties of the government song leaders was to make assistant song leaders out of certain picked men in a few weeks. While this was done, after a fashion, and met a certain contingency, no high standard could be built on such a foundation. Such work requires far more than a voice and the ability to "jolly" people along. Therefore, I say to all organists and pianists, and particularly to those who may have some knowledge of the voice, which all experienced organists should have: Do something that will elevate the standard of music in your community or adjacent town along the lines suggested. If it does not add directly to your income, it will pay in other ways.

How to Begin

A good way to start a singing society or club is to begin in your own church, taking as a nucleus those of your choir or others in the church who may sing. Do not, as was said at the outset, confine it to that church, but invite from all the churches those who love to sing. You will find many waiting to be asked. Perhaps a better plan is to get together a committee and send out a letter, signed by that committee, calling it a committee on organization, to all in the community who are known to sing more or less, asking them to come together for the purpose of forming a glee club, oratorio society, a Schumann, Orpheus, St. Cecilia, Apollo or whatever name or type of club you may wish to start. If the club or choral society is representative of the community, as it should be, it is likely a rehearsal room can be obtained without charge from some church that has the community spirit, or through the courtesy of a chamber of commerce or some fraternal order, or perhaps a public school auditorium might be secured.

You will wish to give at least two concerts a season, the expenses of which can be met in part by the dues of the active or singing members, but largely by an associate membership called subscribing members or patrons.

Aside from the wonderful and inspiring work of elevating the musical taste of the community indirectly, the club should have a direct influence in molding the taste of its singing members. While some of the singing members may be studying music seriously, the largest part at the outset may not be able to read music at all and their highest ambition may have been to sing nothing beyond the "Dear Old Pal of Mine" or "The Sunshine of Your Smile" type of song, or perhaps some ragtime hit. In a short time you will have them singing and enjoying works of the great masters, as well as songs of the best modern composers, arranged for part singing, interspersed with light and humorous numbers that are a part of a well-arranged program. One cannot realize, without having tried it, the joy that such work brings to conductor and singers alike.

A fine work for a community can be done by organizing a Sunday-school or community band or small orchestra. Incidentally, one might obtain a practical knowledge of orchestration while doing it.

Music and Business

Another branch of musical work still in its infancy is the organizing and developing of choral societies and glee clubs in industrial plants, commercial houses and department stores—a work that has wonderful possibilities of development. Such work is waiting only for the right person who will go at it in a manner that will appeal to the heads of such concerns, and who is able to show the value to all concerned. An eminently successful work of this kind is being done in the great department store of Marshall Field & Co., in Chicago, where they have presented most of the great oratorios with large chorus, full orchestra and noted soloists. Some of New York's stores have choruses, but their work is not generally known to the public.

The Organist's Duty

Just as we have a bankers' glee club, why not an insurance men's or stock brokers' glee club? Industrial plants have their ball teams for Saturday and Sunday games during the summer, so why not have glee clubs and bands? They could meet in friendly competition (with each other) on Saturday and Sunday nights in the winter and once a season give a festival concert with the combined forces. The possibilities are so tremendous that I marvel at our indifference to the situation and the smug way we sit back and think how terribly busy we are, just because we may occupy a position as organist of a church and perhaps a synagogue and have a class of pupils. Theatre organists do not come under this indictment as their afternoon and evening work and sometimes morning rehearsals do not permit the adjustment of their time.

Distribute Your Energies

I know from personal experience that it is possible to be organist of a church and synagogue at the same time, direct two or three choral organizations, have a class of private pupils, be an active member of a committee of an organization to which one may belong, spend a night at home once in a while, read the daily papers, a magazine article or two, a few musical publications a month, attend the "movies," opera or concert now and then and do various other things that might be mentioned and still be well and happy. In fact, such a life should keep one well and happy. If I am emphasizing too strongly a general distribution of one's energies and talents rather than a more intensive adherence to one or a few things, such as devoting one's time to concert organ playing or composition, as some of our distinguished organists do, and do well, it is because I would call the attention of others to a much neglected and unexplored field of endeavor, the development of which would make the community happier and richer.

—*The Diapason.*

The Place of the Voluntary

By E. A. H. Crawshaw

As the name implies, a voluntary did not form part of the regular service of the Church and it was optional for the organist to play it or not. Others believed that various preludes and interludes were thus called because they were improvised. It is to be feared that too often little thought is given to-day as to what shall be the voluntaries chosen for public performance. If a preacher were to come as unprepared to the pulpit as some organists to the organ loft, we should not wonder if our congregations gradually diminished.

As Mr. Harvey Grace so ably expresses it: "The organ prelude is the first sound heard by the congregation, and it ought to be a worthy breaking of the silence, however simple it may be." At one town where I lived, Sunday by Sunday, the organist appeared without a single piece of music in his hand—he did not keep his musical library on Church premises—and we were compelled to listen to futile improvisations, generally commenced *pp,* with a gradual *crescendo,* then *diminuendo,* until the preacher ascended the pulpit stairs to the accompaniment of the *tremulant.* As a cure for such improvisers Mr. Grace suggests that their efforts should be recorded on a gramophone, and they should be compelled to hear on Monday what they had perpetrated on Sunday!

I read that the palmy period of the voluntary (i. e. of English composers) was from 1720 to 1830, and that the best specimens were composed by Croft, Beckwith, Keeble, Boyce, Greene, Battishill, Kelway, S. Wesley, Russell and Adams. Mr. John E. West has rescued some of these from oblivion, and edited them in the series of "Old English Organ Music."

To give another personal experience: the concluding voluntary was always chosen in the same key, or one nearly related to the key of the last hymn-tune sung at the service. This is an excellent idea, and is especially gratifying to those who, having an exceedingly good sense of pitch, object to the frequent "ungentlemanly modulation" which perhaps follows the final Amen.

But it is of some of the extraordinary voluntaries which have been played that I would write.

The practice is not a new one. In 1712 Addison found it necessary to protest against "Merry Epilogues after Tradgedies, and Jigging Voluntaries," in *The Spectator* for the 28th of March.

There is a story to the effect that S. S. Wesley once showed his disapproval of something or somebody by putting down the lowest pedal note, and slowly building up and sustaining the chord of C!

Mendelssohn, when travelling in Italy in 1830, was amazed at the poorness of ecclesiastical music. He tells us he was in the Franciscan Church at Venice, gazing at Titian's "Martyrdom of St. Peter." Divine service was going on, and as he was earnestly contemplating the wondrous evening landscape" with its trees, and angels among the boughs, the organ commenced. The first sound was quite in harmony with my feelings; but the second, third, and, in fact, all the rest, quickly roused me from my reveries, and restored me to my senses by their theatrical qualities.

It must be a great temptation to an organist not to improve the occasion by some selection of music which he is sure the audience will recognize. Sir Arthur Sullivan was playing the organ at the consecration of a Church by the then Bishop of London. The hour was fixed for noon, but through some misunderstanding the Bishop did not arrive till one. Sullivan had to play all the time, and amongst other music he introduced "I Waited for the Lord," then one of his own songs, "Will He Come?" the appropriateness of these being apprehended by the waiting congregation.

When Charles Santley was in Italy his experience was not more happy than Mendelssohn's. In his *Reminiscences* he says: "Passing the Carmelites one day, in Milan, I heard the sound of the organ, and entered. About twenty-five girls were receiving confirmation; the organist enlivened the proceedings with selections from *La Traviata.* In the country places all attempt at propriety was discarded; the organist simply played whatever he could get through, sacred or profane. I have heard the favorite galop from the last new ballet and the last movement of the overture to *William Tell* played as voluntaries. At Baveno a few years ago, on the occasion of a wedding, Mass was being performed. At the Elevation (the most solemn part) we were regaled with 'Largo al factotum' from *Il Barbiere di Siviglia!*" Dr. Schweitzer mentions in his *J. S. Bach* that in 1548 an organist in Strassburg was dismissed from his post for having played French and Italian songs during the offertory.

Dr. Henry Coward in his *Reminiscences* tells of a former organist of Leeds Parish Church, Mr. R. S. Burton, a man of strong will and firm convictions, with a large share of combativeness. He displayed all these qualities by playing, at the conclusion of what he considered an unorthodox sermon the chorus from *St. Paul*: "Now this man ceaseth not to utter blasphemous things," which was, doubtless, the opinion also of a good many in the congregation.

Mr. Harvey Grace, in his excellent book, *The Compleat Organist*, has two chapters on the subject of voluntaries which one wishes all "who handle the organ" could read. He pleads for making a feature of the organ music before the service. He argues that then people have time to listen, being most of them "in their places some ten minutes before the service begins." Happy Mr. Grace, if this is his usual experience! His advice as to the choice of suitable voluntaries, both before and after a service, is most valuable.

But in some churches the officiating minister is not musical. To him the only important part of the service is that when he can have his own say—the sermon. If he should be in the pulpit (I refer now to Nonconformist usage) and the organist dare to finish his voluntary, woe be to the unhappy man!

I was recently told by an organist, a Mus. B., and a most capable musician, that he was playing the "*Angel's Farewell*" from *The Dream of Gerontius* before service, and kept the minister waiting a short time until he had concluded Elgar's lovely music. The result was great anger on the part of the minister that he should have had to wait, and an apology insisted on from the poor unfortunate organist. I would certainly prefer to hear that organist's voluntaries than the minister's sermons!

If the ministers take this attitude and give no encouragement to their organists, music will never occupy its rightful place in our services. There are many of us to whom the voluntaries, well chosen and well played, mean a great deal. They may be as distinctly helpful as the spoken sermon, and we echo the words of the Psalmist: "Praise Him with the harp and organ."

Organ Extemporization

By S. M. F.

Extemporization may be considered to a certain degree as a combination of the arts of composition and interpretation. It differs from composition in the same way that ordinary conversation differs from literature; but is not the conversation of a brilliant man far more interesting and instructive than a book which may be the studied product of a dull and uninteresting mind?

Many famous composers have been noted for their skill in the branch of their art; Beethoven and Mendelssohn being two gifted examples. In our own time stands the eminent Marcel Dupre, weaving into massive symphonic form the themes presented to him.

Two phases of extempore playing deserve consideration; that of form and that of color. In regard to the first mentioned, it would be advisable to begin with a Period, forming an imperfect cadence on the Dominant at the close of the fourth measure and a perfect cadence at the close of the eighth measure. Later this could be extended to a Double-Period, reserving the imperfect cadence until the close of the eighth measure and the perfect cadence until the end of the sixteenth measure. Before long the player's musical instinct will show how this can be further developed, and where extra measures may be interpolated or introductory chords added.

A fugal composition should not be beyond the powers of a player, provided a short and simple subject be chosen to begin with, and a knowledge of its construction be possessed.

It is important that a sense of melodic outline be cultivated. Intimate acquaintance with melodies of Mozart, Beethoven, Schubert and Brahms will most assuredly form and refine the melodic taste, just as association with cultured and well-bred people refine the manners.

In regard to color extemporization much depends on the mechanical and tonal resources of the instrument. Variety in tonal texture is important. For instance, it is more interesting tonally to use gamba 8-ft. with flute 4-ft. or flute 8-ft. with gamba 4-ft. than the same quality of tone 8 and 4-ft.

Sixteen-foot stops played an octave higher or 4-ft. stops an octave lower often yield interesting contrasts of tone to the 8-ft. registers. Flutes modify reed-tone, although modern reeds do not require flutes to modify their asperity. Diapasons and gambas or reeds and gambas rarely agree. Four-foot open flutes often have a pleasing quality of tone in their lowest octave which may be effectively used in arpeggios against chords on soft reeds or violas.

When playing a solo, do not always couple the manual used for the accompaniment. If, for instance, an 8-ft. flute is being used on the Choir, accompanied by a delicate string tone on the Swell with octave couplers, the top note of the accompaniment, if uncoupled, will lie above the solo. The effect is pleasing, the ear being intrigued by the apparent conflicting claims of the more powerful toned solo stop and the delicate but more highly pitched accompaniment tone.

Use the vox humana as a timbre creating stop. Its tone, combined with the celeste and 4-ft. flute is arresting. Care should be taken not to fatigue the listener by too constant a use of the tremolo.

The 8-ft. stops on the Pedal organ should frequently be used without any 16-ft. The constant booming of the 16-ft. frequently becomes wearisome to the listener.

Great are the resources and possibilities of the modern organ. It is in their use that one proves himself to be an artist or an artisan.

"I think your boss is a peach. He seemed to have a good time, didn't he?"
"Yes. But why didn't you play the piano when he asked you to?"
"I couldn't. It would have spoiled his whole evening if I'd played on our jangling piano."

"Why didn't you play when he asked you to?'

Had they only owned a Weaver Piano, she could have been proud to play. For the beautiful tone that marks the Weaver when new, stays beautiful through years of use, a source of pride and enjoyment to the owner. And its mechanical perfection never fails to arouse enthusiasm and praise, no matter who the player.

Write to us for the name of the Weaver dealer nearest to you and ask for our catalog. Convenient terms are easily arranged, and a liberal allowance made on your former piano. Weaver Piano Company, Inc., Factory and General Offices: York, Pa. Weaver, York and Livingston Pianos and Player Pianos.

WILDER MASTER PIANO COURSES

Surely every piano player would like to *MEMORIZE EASILY, READ WELL, ACCOMPANY CREDITABLY, INTERPRET MUSICALLY,* and *PLAY WITH GOOD RHYTHM,* and with the least possible effort.

Of course "Nothing comes without effort," but you will find these Courses so *direct* and *clear* that "effort" will be reduced to the minimum. You will be *interested, surprised* and *delighted*—for there is *real joy* for the person who has wanted to "Memorize" for years, and finally discovers that he can. A postal will at once bring you information concerning our Introductory Offer.

The Wilder Publishing Company Dept. E-6 West Newton, Mass.

The Choir Master

Each Month Under This Heading We Shall Give a List of Anthems, Solos and Voluntaries Appropriate for Morning and Evening Services Throughout the Year.

Opposite "a" are anthems of moderate difficulty, opposite "b" those of a simple type.

Any of the works named may be had for examination. Our retail prices are always reasonable and the discounts the best obtainable.

SUNDAY MORNING, NOV. 2nd

ORGAN
Sextet ....*Donizetti-Browne*
ANTHEM
a. O, How Amiable are Thy Dwellings ....*West*
b. Father of Mercies..........*Stults*

SUMMY'S CORNER

The Piano works listed below have proven themselves a pronounced success. Their worth has given them widespread popularity and the demand for them is constantly increasing. They furnish vital material for the basis of a thorough knowledge of music.

THE VERY FIRST LESSONS AT THE PIANO............................ $ .90
PRELIMINARY STUDIES FOR THE PIANO........................... .30
HOME STUDY BOOK FOR BEGINNERS—Parts 1 and 2.........each .40
GRADED STUDIES—Books 1 to 7—Grades 1 to 5.................each 1.00
The above group of Mrs. Crosby Adams' books serve as a complete course of study for the piano. They can be used to form a course for school credits.

PIANO TECHNIC FOR CHILDREN—by Julia Lois Caruthers......... 2.50
Important for presenting the system of early training for the child's hand.

THE CHILD AT THE PIANO—Meta Zarbell Steele..................... .75
A logical manner of conducting the first study of the Staff, Keyboard, Rhythm, Technic and Interpretation

THE FIRST MELODIES FOR THE PIANO—by Lillian Sara Jackson .75
The melodies are enriched by an harmonic background played by the teacher.

FROM THE VERY BEGINNING—by Phyllis Lucy Keyes............. .60
Characteristic first pieces with words, giving the pupil a full knowledge of the entire staff.

SYNTHETIC SERIES—Book 1—By Florence A. Goodrich............... .75
A revelation in the teaching of the first steps in memorizing.

THE LITTLE HANON—by Robert J. Ring.......................... 1.00
Important finger technic for beginners, patterned after and preparatory to the Hanan Virtuoso Pianist.

Two Practical Accessories for Teacher and Pupil

THE TEACHER'S LOOSE-LEAF JOURNAL-LEDGER
Loose Leaves—pkg. of 50, .35 Binders—Full Morocco, 2.25 Imitation Leather, 1.25
A handy account book which does away with the weekly period of book-keeping.

THE MUSIC STUDENT'S LESSON RECORD—by Leola Arnold ...... .35
Its simple percentage system keeps a record of the quality of work of the pupil and the time spent on practice, covering a full year's work of one or two lessons a week.

The Birth of the Organ

How old is the organ? No one really knows. There is a very interesting carving of an organ upon an obelisk erected by Theodosius, who died in 393 A. D.; but it is certain that organs existed long before his time.

The organ was in general use in the churches of Spain as early as 450 A. D.

In 666, Pope Vitalian at Rome realized the advantages of the organ in church singing and advocated its use. This pope, however, had the habit of changing his mind and soon thereafter abolished congregational singing in the church and advocated the use of canonical singers.

Organ making was introduced in England in the eighth century. It was introduced in France just a little later.

Pepin, the father of Charlemagne, imported an organ from Constantinople (Byzantium) about 757. It was a pneumatic organ and its pipes were made of lead. It was played by an Italian priest.

The first organ introduced in Germany was one erected by Charlemagne in Aix-la-Chapelle. It was a copy of the organ his father had imported from Constantinople.

In 825, the Caliph Haroun al Raschid presented Charlemagne with an organ by an Arabian maker. This organ was also erected at Aix-la-Chapelle.

Waiting at the Church

"When I was organist of St. Michael's" Sir Arthur Sullivan says, in Arthur Lawrence's biography of this genial composer of "H. M. S. Pinafore" and other such works, "my friend Cranmer Byng was appointed vicar of a new church, and I designed the new organ for him and undertook to find an organist. When the day arrived for the consecration, I hadn't obtained the organist for him, so I volunteered to play for two or three Sundays, until I could find someone else, with the result, however, that I played there for two or three years. I remember that at the consecration of the church by the then Bishop of London, the hour fixed was twelve o'clock, and by some misunderstanding the Bishop didn't arrive until one. Consequently, I had to play the organ the whole time, in order to occupy the attention of the congregation. As the minutes went by and the Bishop didn't arrive, I began to play appropriate music. First I played 'I Waited for the Lord' (in England, it should be explained, a Bishop is a member of the House of Peers, as one of the 'Lords Spiritual'), and then went on with a song of mine which is entitled, 'Will He Come.' The appropriateness of the piece was perfectly appreciated by the congregation."

Handel—Adapted

In the preface to an edition of Handel's "Messiah" written by Dr. John Clarke, the following amusing anecdote is given: "Being on a visit to a friend in a country place, the inhabitants of which were more primitive than scientific, Dr. Busby, on his way to church on a Sunday morning, overtook one of the choristers with a bundle of music books under his arm.

" 'What have you got there, my man?' said the doctor.

" 'Zum of Handel's music, zur, that we're going to zing at church today,' was the rejoinder.

" 'Handel!' said the querist, somewhat astonished; 'don't you find this music difficult?'

" 'Why,' said the countryman, 'we did at furst, zur, but we altered un a bit, and he goes very well now.' "

Considering how freely Handel himself took the music of other composers and "altered un a bit," the treatment given to the "Messiah" by the West countryman seems only fair.

A Thought for Choir Directors

By A. Lane Allan

An organist-teacher-choir-director has worked out a satisfactory plan to help pupils to pay for their lessons. She is organist and director of the choir in one of the large churches in an eastern city Upon discovering a pupil whose voice seems promising she suggests a test to see if arrangements can be made for him to sing in the choir. If the voice is satisfactory she allows the pupil to apply the fee which he receives from this source in payment of his lessons on the organ or piano as the case may be.

A little assistance of this kind makes it possible for a pupil to continue his lessons sometimes, or pay for the music he uses Those who have been fortunate enough to qualify for the work in the choir are of course receiving valuable training, free of charge, in the control of their breathing.

Adjusting Hymn Titles

To the Etude:

Your issues of The Etude have, in the last few months, contained articles from correspondents who have fallen into errors in naming of tunes, calling them by the words of the first lines of hymns. I recall two or three such. The proper name for the tune to which we sing the words is "Bethany," and never "Nearer My God to Thee." Suppose we sang these words to the tune by Sullivan, the words "Now I Have Found a Friend," would you call the tune Bethany by the words "Now I have found a friend?" It is simply absurd to allow such inaccuracies. Another thing in this connection is that Lowell Mason did not compose the music: it is taken bodily from Tom Moore's ballad, "Oft in the Stilly Night," as anyone can see by comparing them for himself. Another tune misnamed is "Lux Benigna" to which we sing "Lead Kindly Light." But the tune should never be named simply from the words of the first line of the hymn.

And there is another matter in connection with hymn tunes to speak of. A year or two ago a famous preacher of New York addressed the association of organists and tried to impress on them the importance of playing the *hymns* in better style. I, thereupon wrote the preacher and suggested that we organists *never play hymns*, but we do play the tunes: the hymns are words, the tunes are notes. The gentleman answered that he was exactly wrong and that I was exactly right. It does seem strange that so many fall into bad habits of inaccuracies in the relation of hymns to tunes.

John Q. Everson, Pittsburgh, Pa.

Musical Ambassadors

The recent Mascagni-Mocchi trouble in Buenos Ayres was the occasion for some pertinent remarks by the eminent baritone, Dinh Gilly, in the *Musical News and Herald*, of London

After discussing the necessity of the impresario offering his public the style of opera it likes, Mr. Gilly continues:

"It is only a partial truth to say that music is international. There *is* competition for supremacy, and the nation, which, having 'the goods,' knows how to advertise them best and can organize a propaganda which puts nationalism first, is bound to come out best. Artists should not be *driven* out of their own country to seek in foreign lands the recognition which their own country has denied them, but should be *sent* out as propagandists and find abroad their main support in their co-nationals. Does not an artist do abroad as much for his nation as any commercial firm? Did not 'Caruso' mean Italy; 'Sarah Bernhardt,' France, and 'Hans von Bülow,' Germany?"

I Have Found Out How to Get Rid of Superfluous Hair At Once

Here's the Secret

I had become utterly discouraged with a heavy growth of hair on my face and lip. I tried every way o get rid of it—all the depilatories I had heard of, electrolysis, even a razor. I tried every advertised remedy, but all were disappointments.

I thought it was hope-ess until there came to ne the simple but truly vonderful discovery vhich has brought such reat relief and joy to me nd to other women that t really cannot be expressed in words.

My face is now not only erfectly free from superluous hair but smooth nd soft as a baby's, all by se of the simple method hich I will gladly exlain to any woman who ill write to me.

This amazing method is ifferent from anything ou have ever used—not powder, paste, wax or quid, not a razor, not lectricity. It will remove uperfluous hair at once nd will make the skin oft, smooth and beautiully attractive. Its use neans an adorable apearance. And you face he brightest light—the nost brilliant electric amps—even the glare of unlight joyously.

With this method, used ccording to the simple irections I will give you, our trouble with superuous hair is over peranently. You will never gain appear with that gly growth to disfigure our face.

So overjoyed was I with he results this discovery rought to me that I gave it my own name—Lanzette.

Send for Free Book

A book that tells just how this wonderful method ets rid of superfluous hair is free upon request. on't send a penny—just a letter or post card. ddress Annette Lanzette, Dept. 1073, care Hygienic aboratories, 204 S. Peoria Street, Chicago, Ill.

WHO WILL PAY THE DOCTOR, THE NURSE AND THE BOARD BILL WHEN YOU ARE SICK OR INJURED?

The Teachers Casualty Underwriters is a national protective association of teachers for teachers. For a trifling cost, it will assure you an income when you are sick, accidentally injured or quarantined. It also pays operation and hospital benefits.

It pays to have a friend like the T. C. U. in time of need. Send a postal for full information.

Make your questions short and to the point.

Questions regarding particular pieces, metronomic markings, etc., not likely to be of interest to the greater number of ETUDE readers will not be considered.

How to try a new Piano.

Q. *Please mention a few points to notice when trying a new piano—any chords or runs or tests that would make an opinion of some value, not merely a case of "it pleases me," or the contrary.*—X. Y. Z., Montreal, Canada.

A. Start from middle C, play every note of the chromatic scale, ascending firmly, slowly, in order to learn if the tone is round, has depth, that its quality is equal throughout; then examine the descending scale similarly; next, play a little faster the scales of C, E-flat and B ascending and descending, to test the weight and evenness of the touch, the singing quality or *sostenuto;* now play some rapid scales, roulades, arpeggios, not forgetting prestissimo repeated notes to discover if the mechanism responds immediately to the touch, even the lightest. Examine the pedal action. If the instrument be second-hand, be sure to see if the sound-board is perfect, no crack, no repairs, but as perfect as new. Read "The Story of the Pianoforte," by A. J. Hipkins (Novello's Music Primers), and "A Noble Art," by Fanny Morris Smith (published at Steinway Hall, New York City).

Whence comes the name "Hornpipe?"

Q. *I have always thought that a "Hornpipe" was a sailor's dance; but recently I saw it mentioned in a book as an instrument. Is it not a mistake? Please tell me something about it.*—A. C. D., Philadelphia, Pa.

A. The Sailor's Hornpipe is the most "modern" (!) of the dances known as Hornpipes. It dates back to the late seventeenth century period and is probably related to the Dutch "Matelotte." Before that period, however, the Hornpipe was a most fashionable dance all through the sixteenth century, in the reigns of Henry VIII and Elizabeth, and each county in England had its special form of Hornpipe. Thus the dance called for appropriate tunes, and we find them among the compositions of the best musicians of the times: Hugh Aston, Henry Purcell and others. This dance took its name from the instrument which originally accompanied it. The antiquity of the Hornpipe as an instrument is difficult to determine. A vocabulary of the fifteenth century translates the Latin *Cornubium* with "Hornpipe" and another early dictionary includes the word about 1440. It was a wooden pipe with finger-holes and a bell or horn, played with a single-beating reed which was also covered with horn. Ben Jonson speaks of "the nimble hornpipe," and Dryden, in his translation of the Æneid, says "The shrill hornpipe sounds to bacchanala." Thus we have: first, the instrument; then the dance accompanied by it; finally, the variation known as the Sailor's Hornpipe.

Difference between Bombard and Bombardon.

Q. *What is a Bombard; what is a bombardon?*—Theresa, Milton, Mass.

A. A Bombard (Bombarde, Bumbarde), a wood-wind instrument of conical bore, having a double reed, belonging to the bass of the Shawn (or Shalm) or early Hautbois family. It is ancient, found frequently in the records of Henry VIII's time, and must not be confused with the modern brass instrument with valves called the Bombardon.

About "Covered Tones."

Q. *In singing, what is meant by a "covered tone?" What kind of voices need work on it? How would you teach its use?*
—C. E. M., Kentucky.

A. The change which occurs in voices when the "open" tone is no longer employed; by "open" is understood the vibration of the vocal chords in their full length and thickness. It is also applied to the resonance cavity or cavities employed, as, for example, when in singing the low notes the sensation seems to be entirely in the chest cavity and the tones are full and round, the voice is said to be "open." All voices should acquire the "covered" voice, most particularly contraltos, tenors and all male voices. It is absolutely impossible to give any kind of vocal lesson in print or by correspondence. The teacher must hear the voice to recognize the kind of fault in order to apply the proper remedy. You would do well to take some lessons from a really competent male teacher whose chief aim is to make competent singers.

Diction—Enunciation—Vocal Bibliography for a Pianist.

Q. *Please recommend a bibliography for a piano teacher and theorist who wishes to appreciate songs. What is "good diction"? I know what good enunciation is in speech. Please recommend exhaustive text.*—F. S., Akron, O.

A. *Interpretation in Song*, by Greene; *The Art of the Singer*, Henderson; *How to Sing a Song*, Yvette Guilbert; *Pour Chanter*, Léon Melchissedec, Paris; *Songs and Song Writers*, H. T. Finck. "Good diction" in song is analogous to good enunciation in speech, or, rather, to perfect articulation of consonants. Consult *The Art of Singing Words*, Arthur de Guichard (The University Society, New York).

Prima Donna—Lillian Evans Blauvelt.

Q. *Is there a prima donna named Lillian Evans Blauvelt, and what is her nationality?*
—Tenor, Troy, N. Y.

A. Lillian Evans Blauvelt was born at Brooklyn, N. Y., of Welsh and Dutch parents. She was exceptionally gifted in music, making her debut at Steinway Hall, New York, as a violinist at the age of eight. She made her operatic debut at Brussels, in Gounod's "Mireille," in 1891, after which she has had a most successful operatic and concert career in Rome, Munich, London and America. Grove says she has a pure soprano voice of exquisite quality.

Cadence and Cadenza.

Q. *Will you please explain about cadence and cadenza? I always get so confused about them. Is there only one form of each, and how should they be used?*—Herbert W., Broadway, New York.

A. A cadenza is a running passage at the conclusion of a vocal piece. In instrumental compositions, also, space was formerly left for the solo performer to add a suitable cadenza, displaying his technic and brilliancy. Clementi wrote cadenzas for the whole of Mozart's concertos. A cadence is the end of phrase, formerly called a fall (*cadere*, Latin to fall), either in melody or harmony. There are four principal forms of cadence in harmony: the whole, or authentic; the half, the interrupted and the plagal. When the last chord (the major or minor chord of the key) is preceded by the major chord of the dominant, such cadence is called whole or perfect. If the last chord is the dominant and is preceded by the chord of the tonic, the cadence is called half or imperfect. When the last chord of the phrase is other than the tonic chord and is preceded by that of the dominant, the cadence is said to be interrupted, false, or deceptive. The cadence called plagal is that in which the chord of the tonic is preceded by the major or minor chord of the subdominant.

The chief Factors in Memorizing.

Q. *I find it very difficult to memorize my piano studies and pieces. As long as there is a melody, not too intricate, I can memorize fairly well; but when it comes to technical studies Czerny, Cramer, Bach's Inventions and music of a similar kind—classical, that is—I am quickly at fault. What do you suggest to overcome the difficulty?*—A. W. M., Denver, Colo.

A. Chief consideration: the power of memory is proportional to the amount of attention; therefore the *chief thing to be cultivated* is the *power of concentration*—application and will power must be concentrated upon the study to be memorized. It is easy to prescribe and just as easy to do, *provided the student possesses WILL*—without it there will be no memorizing. This will power and concentration must be put into operation (1) to educate the eye to make a mental picture of the printed page; (2) to educate the ear to retain the melodic and harmonic sequences; (3) to analyze the structure of the composition, in order to fix in the mind the mental picture; (4) to remember by the touch the various peculiarities and combinations of fingering. If the student concentrates on these points he will soon find that his memory awakens and responds.

To play or Not to play with the Metronome.

Q. *Ought I to study my pieces and exercises with the Metronome beating the time indicated in the music? My teacher says that I should do so, but I find it makes my playing incoherent and a scramble. What do you advise?*—Pianist, New York City.

A. Your playing is "incoherent and a scramble" for the very reason that you try to play according to the metronome indication; whereas that *indication is for the pace* that you will *finally play when you know the composition thoroughly.* Would you run or row a race by starting your very quickest, leaving nothing for the "last lap"? When you start your motor do you not usually begin on low, then on two, finally on high? *Practice slowly.* Let all your scales, arpeggios, technical studies and "pieces" be practiced slowly until you have mastered them sufficiently to increase the pace; then by degrees succeed in playing according to the MM. mark. Remember: *Every day begin your technical studies and pieces slowly, increasing the pace very gradually,* proportionally to the good tone and the degree of facility that you have acquired in that special work.

Mickey Daniels is one of the juvenile stars appearing in "Our Gang Comedies" produced by Hal E. Roach and distributed by Pathe.

Freckles

AMUSE YOU IN THE MOVIES

But it's not so funny to have them in real life. Mickey Daniels can afford to let others laugh at his freckles—he's paid for it. You can't.

Your freckles always attract attention, no matter how well you dress. Get rid of them!

Quickly and surely they will disappear if you use Stillman's Freckle Cream. Double action—not only are your freckles dissolved away, but your skin is whitened, refined and beautified. Guaranteed to remove freckles or money refunded. Most widely used preparation in the world for this purpose. Snowy white, delicately perfumed, a pleasure to use. Two sizes, 50c and $1, at all druggists.

Write for "Beauty Parlor Secrets" and read what your particular type needs to look best. Full of beauty treatments, make-up hints, etc. If you buy $3 worth of Stillman toilet articles in 1924, we will present you with beautiful large size bottle perfume free. Send for booklet now.

"I Can Teach You to Dance Like This"

—Sergei Marinoff

You can study classic dancing in all its forms. Greek, aesthetic, intrepretive, Russian, ballet — under the direction of the famous Sergei Marinoff. This remarkable home study system, endorsed by well known dancing teachers and dancers, enables anyone to master the technique of the dance. Marinoff makes the training easy and fascinating. You have a complete studio in your home. The equipment consisting of practice costume, slippers, phonograph records, and dancing bar, are furnished free with the course.

Write Today!

Everyone interested in dancing should write to Sergei Marinoff at once and get complete information about his splendid system of home instruction in Classic Dancing. This information is free. Write today

1924 Sunnyside Ave., Studio 55-86 Chicago

The Violinist's Etude

Edited by ROBERT BRAINE

It is the Ambition of THE ETUDE to make this Department "A Violinist's Magazine Complete in Itself"

A Growing Profession

VIOLIN teaching is a growing profession. There has not been, in the entire history of music, such a rapid development in the popularity of an instrument, nor in the number of students studying it, as that which has taken place in the last ten or fifteen years, in the United States, in the study of the violin.

We have no way of knowing what the percentage of increase in the number of violin students has been; but there are towns and cities scattered all over the country where it has been 1,000 per cent at least.

The cause of this wonderful increase in the popularity of violin playing and the number of people studying this instrument has been the wide-spread introduction of the class system of teaching, making the cost of instruction very cheap, and putting it within the reach of the masses. This class instruction has manifested itself in two forms, one the introduction of violin instruction into the public schools, and the other the establishing of numerous private violin schools, where a season's term of class lessons, including a violin outfit, is offered at a very cheap rate.

Violin Instruction in Schools

Hundreds of towns and cities have introduced violin instruction in their public schools. The classes range in size from two to twenty-five pupils; and where a fee is charged, the price of lessons ranges from ten cents to a dollar, the fees going towards paying the violin teachers. In some schools the teachers are paid by the school board, and the violin instruction is entirely free.

The violin pupils of the schools, as soon as they are sufficiently advanced, are formed into school orchestras which play for the marching of the pupils, for school entertainments, and other events. Besides being complete in themselves, these school orchestras are often combined into one large orchestra for special occasions, such as concerts and musical festivals. In cities of from 50,000 to 100,000 we often hear of these combined orchestras numbering from one hundred to three hundred violins, or even more.

Nominal Cost

Owing to the nominal cost of the instruction and the pleasure of playing in the orchestras at the schools and in their public performances, violin playing has become extremely popular in the public schools, and the number of violin pupils in the country is increased many thousand each year from this source alone. I know, personally, of moderate-sized cities in the middle-west, where the number of violin students in each town has increased from approximately fifty to five hundred within the last ten years.

The establishing of hundreds of private violin schools with the class instruction system, is also swelling the number of pupils by thousands. In these schools violin teaching is commercialized and reduced to an exact business proposition. I recently had a talk with a traveling representative of a violin house which makes a specialty of selling cheap violin outfits to these schools. His story was really illuminating, as showing the tremendous growth of violin instruction now going on. He said, "It will be a surprise, even to many musicians and professional violinists, to hear on what a large scale many of these schools are operated. The plan has been in general use on a large scale in the United States for only about ten or fifteen years. A course of from thirty-six to forty lessons (or in some cases fifty) taken weekly, is offered at seventy-five cents to one dollar per lesson. As an inducement to the pupil to enroll, he is given a violin outfit entirely free, to become his property as soon as he has completed and fully paid for the full number of lessons in the term. The pupil, or his parents, signs a contract setting forth the terms of the bargain, and the lessons are started at once.

"Our firm sells these violins to schools of this character at three dollars each, bags and bows at seventy-five cents each, the entire outfit thus costing four and one-half dollars. Some schools pay a little more for the violins than this, but not much. The pupil who gets the outfit is, of course, under the impression that it is worth from twenty to twenty-five dollars.

"The classes in such schools range in size from ten up to twenty-five pupils in some cases. Where the charge for lessons is one dollar each it thus appears that the school gets from ten to twenty-five dollars for a single class lesson. It is very apparent that the school can easily afford to give away to each pupil a violin outfit costing only four-and-a-half dollars, since it receives from thirty to forty dollars for the term, according to the length of the term, and the price of the lessons. The schools also have other sources of income, as they arrange in many cases for private lessons, to be given when the teachers are not busy with the class lessons. They also have excellent opportunities to sell more expensive violins, ranging in price up to two hundred dollars as well as bows, cases, strings, and general musical merchandise. Many of these schools also have classes in mandolin, guitar, banjo, ukulele, and other instruments, which are operated on the same plan of a term of lessons, with a free instrument included.

Two Hundred Violins a Month

"Pupils are secured for these schools by putting out agents who make a house to house canvass, ringing each door bell like book agents or vacuum cleaner canvassers. An effort is made to round up all the children of a neighborhood, and, to try to induce the parents to send them to the school. Almost everyone is interested in music, and where the door would be quickly closed in the face of an ordinary canvasser, the representative of the violin school is usually invited in, and an animated conversation ensues; for people never tire of talking about their children. A violin outfit free, and a season's lessons, all for thirty or forty dollars, looks like a bargain to many; and the canvassers bring in hosts of pupils.

"To give you an idea of the scale on which some of the violin schools are conducted, I might mention that in one of the larger western cities there is a school which we furnish with two hundred violins every three months. There is hardly a city in the country, of over 25,000 population, but what has one or more of these schools, and the number is increasing all the time, as it is found to be a money making proposition."

Only Crude Results

Of course all this increased interest in violin playing and wonderful increase in the number of pupils, must eventually result in a wonderful impetus to the art. For the present, unfortunately, the development has been more in quantity than quality; that is, there has been an enormous increase in the number of violin pupils who have acquired a smattering of the art, but a much smaller increase in the number of really artistic players. Under the class system, at least where there are many in the class, only very crude results can be looked for. To learn the violin in a really artistic manner a pupil must have individual instruction, at least once or twice a week. It is the most that a really competent violin teacher can do to teach one pupil, let alone a half dozen, to say nothing of twenty or twenty-five. It is very difficult for most pupils to acquire the proper motions of the arm and wrist in bowing, and here is where the guidance of a good teacher becomes absolutely necessary. Where there are so many to teach at once, it is quite impossible for the teacher to give every member of the class a good bowing.

However it is quite certain that if interest is increased in an art or science, a great evolution is bound to take place in that art or science; so, if interest is increased in violin playing, by multiplying by many times the number of players, even though their attempts are crude, the number of artistic players also will be increased. There will be more pupils for the artistic teachers. As the art of violin playing becomes more diffused among the people, there will be more pupils with talent for violin playing, a greater number of geniuses of the virtuoso order, and more composers of violin music. This has been the experience in countries like Hungary, where violin playing is so common, and the result will be the same here in our own country.

Hints in 'Cello Bowing

By Caroline V. Wood

IT may sound ridiculous to tell a 'cello student to keep his bow moving, but sometimes this injunction seems necessary. A new student, lacking self-confidence and ability as well, is apt to be over-cautious and bow in a very cramped way. He is so busy locating the notes on the fingerboard that he forgets to keep his bow moving freely, and the result is very scratchy sounds.

The 'cello student should be taught to bow freely, that is, with a free arm movement. Only in this way can he produce even, smoothly-flowing tones. The 'cellist should learn to feel at ease when playing —he must have confidence in himself. Of course this does not mean that carelessness should be tolerated, nor that the bow should race across the strings. But *keep the bow moving freely,* without any unnecessary hitches or stops. Remember, it is only by moving the bow across the strings that any sound at all is produced, and this sound should be *music.*

This need not interfere in any way with long, slow bowing, which must also be given attention.

Ensemble for "String" Students

By Alfred Sprissler

NEARLY every musician when making the first step into ensemble playing, finds himself considerably at sea. The routine is new, so new that apparently all he can do is to sit fast in his chair trying to look intelligent. Everything seems vague and hazy; nothing is understood; and the other musicians are seemingly doing things entirely differently from what is ordered in the notes.

His crowning bit of wormwood is swallowed when one of the seasoned warhorses approaches, smiles balefully and observes, "Your trouble is that you play alone too much."

The worst part about this observation is that it is correct. The student has been so immersed in acquiring the fundamental technic of his instrument that he has arrived at a strange condition. When playing a selection he will, unless an exemplary student, accelerate the tempo when he comes to a portion of small difficulty; and conversely, should a part of extraordinary difficulty appear, he will retard his time to suit his lack of ability.

Consequently, after years of playing alone, the student has lost his perspective. He has acquired such a mental state that his acceleration and retardation are involuntary, so much so that he would resent your telling him of it. But the first time playing with others proves his delinquency.

The master-and-pupil exercises for 'cello of the Dotzauer-Schüle are not sufficient to insure the bases for good ensemble playing. The teacher's part is so meagre, and the pupil's so elaborate, that the result is quite unsatisfactory. Besides, the playing of such exercises is uninteresting.

The problem was happily solved when a volume compiled by my grandfather was discovered. It contained violoncello duets of such as Sebastian Lee, Felix Battanchon, Breval and Kummer. The duets by this last composer initiate the student into the peculiarities of the tenor clef, by easy stages, and are written upon themes from Mozart and Haydn. They are very melodious and give an opportunity for as much ensemble work as the young pupil can conveniently handle at this time.

A teacher of the violin mentioned the fact that he had seen what results were forthcoming from this departure. He suggested that one of his advanced students meet my scholar for the purpose of duets for violoncello and violin. My library contained the necessary selections and the twain were started on the six selections of Charles Dancla, composed on themes from operas "Il Barbiere di Siviglia," "Lucia," "Norma," "Der Freischütz" and "Don Juan." The parts were loaned the young musicians with the understanding that the practicing of them was in no way to interfere with the regular routine. One lesson per month was spent in working at them under supervision, my friend and I alternating.

The literature for this combination, practically unknown by many teachers, is rich. Beethoven composed three very fine duos for clarinet and bassoon, which may be had for 'cello and violin. The indefatigable Sebastian Lee has to his credit many selections for the combination. Wichtel, of "Young Violinist" fame, has a large repertoire of them; although they are little more than violin concerti with 'cello accompaniment. The part is excellent schooling, however, if the 'cellist's wrist holds out. Kreutzer has also contributed. Breval has written a multitude of easy duets, well fingered, which instil a sense of time into the players. Last, but not least, Haydn has a very excellent posthumous duo which is worth careful study.

The results of this training are manifold. In the first place, it gave the young persons under my notice an insight into the pleasures and profits accruing from concerted practice, aiding them in time and the production of tone. Then it made them look with interest upon the string trios and quartettes which were to follow when their proficiency made such possible. Above all it gave poise and ability to listen and understand what "the other fellow was doing" without becoming nervous and trying to "catch up."

Instrumental Music in Public Schools

By Glenn H. Woods

(*Continued from page 598*)

forge? Not on equipment furnished by their parents.

In Cass Technical High School, Detroit, the Board of Education has placed $7,000 worth of musical instruments in one building, with an annual budget of $3,000 for maintenance. A concert band, two orchestras, seven full-time instructors with seven half-time student teachers, give ample opportunity to many students for special musical training. This is the way Detroit does things.

The Plan

Children enter the public schools at six years of age. By the time they are in the third grade—or at nine years—it is possible to begin their instruction in instrumental music. The choice of instruments is usually left to the decision: (1) of the parents; (2) of the child, who wants to play 'cause his nearest friend has begun lessons; (3) of the parents and the teacher, who, upon request, can usually advise the best instrument for the child to study, taking into consideration the hand, the lips, the teeth, and the musical attitude of the child, not overlooking in the final equation his mental caliber and the home supervision of study.

The instrumental teacher usually visits one building every day, depending upon the number of pupils enrolled. Pupils are excused from regular class by consent of the Principal and his classroom teacher, who determine the period he can be excused with the least retardation in his studies.

In some schools the "sliding schedule" is in operation and the child is not taken out of the same class but once in every eight weeks. This system is hard to establish, but it has much merit after the pupils have learned to follow the jumping plan.

In the elementary schools the orchestra rehearsals usually occur before school (from 8 to 9 o'clock); then the individual or group lessons are continued throughout the regular school day, being given in school time. If the school day has eight periods the instructor teaches an average of four per period, or thirty or more pupils per day. Sometimes it is possible to group four or six violin pupils in one period, or three clarinets, or four cornets, but rarely more than six studying the same instrument in a period. A child is not taken into the orchestra until he has had about one year or more of individual instruction, depending somewhat on his aptitude and progress. The instruments most in favor are the violin, cornet, clarinet, flute, trombone and cello, as they represent the solo or home instruments. So the orchestra in the elementary schools is incomplete in instrumentation. The viola, French horn, string bass, oboe and the bassoon are left for the junior and senior high schools.

Here the pupils are mature enough to make rapid progress. Either by making such a transfer as from cornet to horn, or making a fresh start on a new instrument, however, the instructor is able to keep up and continue the complete instrumentation of the orchestra. This is where the school department must furnish the unusual instruments.

In the junior high schools the enrollment is usually sufficient to employ a regular full-time teacher for the building. The plan holds good in the senior high, except that it is often necessary to have two teachers to instruct the large number of pupils enrolled in the classes. Here the bands and orchestra rehearse daily on school time usually the afternoon periods and receive the same credit for the subject as they do in other studies.

If more cornet pupils enroll than can be accommodated in the orchestra, the instructor induces two or more to transfer to French horn; saxophone players find the bassoon easy; flute players like to learn the oboe; and piano pupils find the string bass helps to strengthen the fingers of the left hand. By this process pupils are encouraged to learn to play more than one instrument and the orchestral instrumentation is kept full and complete.

At the present writing there is no educator of any renown who distinctly champions the cause of music. Much has been written and spoken on every other

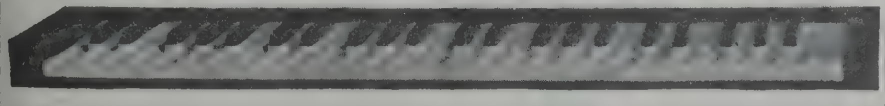
"Opportunity Knocks at Everyone's Door Once"

There will be ***thousands*** studying the piano five years from to-day where there are but ***hundreds*** to-day. From "individual" to "class" instruction, history will repeat itself in piano playing, as in practically every other branch of learning.



The Teachers who realize the possibilities of Class Instruction ***today,*** are the ones who are sure to benefit ***tomorrow.*** A postal will bring you interesting information.

The Wilder Keyboard Company, Dept. E-6 West Newton, Mass.

The Pleasantville High School Military Band, of Pleasantville, New York, John E. Morgan, Principal and Director. There are 41 instruments, 32 of them are Conn. Director Morgan says: "As long as the Conn equipment gives us the complete satisfaction that it has for the last ten years, and as long as I am both manager and director, the percentage will always equal or exceed the above."

For School Bands and Orchestras

THIS is the year to make your band a prize winner! If there is no band in your school *now* is the time to start one.

There is nothing like a band or orchestra to arouse enthusiasm. Contests arranged under auspices of the Band Instrument Manufacturer's Association afford the competitive opportunity which arouses and sustains interest. We'll gladly give complete information about these contests.

The value of the band as an educational, cultural and character-building factor is recognized by all leading educators.

Conn. Ltd., as the world's largest maker of band instruments—the *only* maker of every instrument for the band—has been a pioneer in helping to organize and equipping successful school bands.

Our Band Service Department is at the service of everyone interested in school bands and orchestras—whether the problem be a new organization or development of an existing band. No obligation; write us freely.

Every experienced band director realizes that good instruments are "half the battle." That is why Conns are used in so many successful school bands. Their *easy playing* qualities encourage young players, enable rapid progress; their perfect scale and beautiful tone quality produce a striking ensemble effect.

Sousa and the other foremost concert band directors use and endorse Conn instruments for the same reasons which make them preferable for amateurs.

We can supply instruments to suit every purse. Complete outfits can be obtained at surprisingly small outlay. Send coupon now for special booklet and complete details.

TO TEACHERS

Now, you can have the advice of the most conspicuously successful organizer of school bands in the United States.

Realizing the tremendous and growing importance of music in the schools, the House of York determined to make available to every teacher and band leader, an exact and proved method for the organization and training of the school band. G. C. Mirick, of Chelsea, Iowa, was chosen to write this book, which is now ready for distribution.

A limited edition has been printed. If you are now organizing a band, Mr. Mirick counsel will simplify the undertaking to an astonishing degree. If your school has not already made plans for a band or orchestra, you will find in this booklet many helpful suggestions as to the easiest ways to stimulate the interest of pupils, parents and school officials.

Simply fill out and mail the coupon below for this interesting booklet. Send immediately, for the small edition will soon be exhausted.

The most important
VIOLIN DISCOVERY
since Stradivarius

INSPIRED with the traditions, zeal and devotion of the masters of old Cremona, two master craftsmen of Naples, have developed a structural principle in violin building which artists and scientists alike agree represents *the greatest advance since Stradivarius discovered the true geometry of the instrument!*

The Virzi Tone Amplifier, embodied as a structural unit in every Virzi violin, viola, cello and bass, adds a richness, singing resonance and volume of tone which astonishes and delights the most critical listener.

World-famous artists use the Virzi violin, frequently in preference to rare old masters. Astonishing, perhaps, but true, we'll gladly prove it to you.

Virzi violins, violas, cellos and basses are made in Italy by master craftsmen; carefully graded and definitely priced. *Look for the purple ribbon which every genuine Virzi instrument wears; it's your assurance of violin value.*

Write now for catalog and complete information.

What Artists Say.

1. Fritz Kreisler: "The Virzi Tone Amplifier has a great value to improve the violin."

2. Albert Spalding: "I am de lighted with the Tone Amplifier in my violin. The tone has been greatly improved both as to clarity and in quality."

3. Erica Morini: "I have purchased a Virzi Tone Violin. It has wonderful tone and great carrying power—good for concert work."

subject. Much time and study have been given to program making to accommodate the new subject; much thought has brought forth these subjects into popular approval and prominence; yet Music—upon which American adults spend annually over $700,000,000—since music appreciation comes with mature years—has never had a champion before the educational court.

Do you know of any city that has:

(1) Made a distinct effort to learn the real educational value of music?

(2) Experimented on methods in the grades to ascertain the real mental activity that the child must use?

(3) Given consideration to the Junior High School music, where the changing voice of the boy should be so carefully dealt with that the men of the future cannot lay upon the American Public School the blame for their inability to sing a man's part?

(4) Made music in the Senior High of such distinction that pupils can carry their academic studies and also secure a good musical education at public expense?

(5) Considered the "leisure-hour" problem with its craving for amusement, excitement "something to do" or "somewhere to go?"

(6) Learned that musically trained hands are rarely "idle hands" and for them the Devil has little use?

One might go on and ask why the educators have not yet discovered what the musician knows can be done with music in a school system and accomplished by it.

Did you ever drop in to a rehearsal room and watch a band or an orchestra at work? Do you know of any other subject that can hold the interest and attention of a class of fifty to seventy high school students, get thirty-five minutes of work out of a forty minute recitation and secure real effort from every individual for the entire recitation period? Some educator will discover it some day and make a Conservatory out of the High School. May that *day* come soon!

A good citizen is a value to any community. A boy is the man in the making: teach him to do and you have less to *undo* later. California spends $33,000,000 annually to maintain her penal institutions and reports state that sixty-five per cent of the inmates are under 25 years of age. One tenth of that amount of money invested in music instruction, teaching boys *how to blow a horn,* might keep them so busy that they would not have time to learn *how to blow a safe.* Just look about you in any city and see the number of little orchestras that can be found in lodges, clubs, churches, and other organizations, and you will realize that people who can play would rather play than be idle. If for no other reason, then, instrumental music is of value if it accomplishes no more than the occupation of time, or the consumption of leisure.

The Boy is worth while. Music can reach him. He can be taught to play any instrument and enjoy the sport.

Educational systems can well afford to buy all the instruments that are needed to

Established 1874 New York City

When you Buy an Upright, Grand, Player or Reproducing Piano—Insist on the Wessell, Nickel & Gross Piano Action.

Teachers always find it an inspiration to have *New Ideas* with which to begin a season's work, because they realize their pupils look forward to ***new and progressive ways of obtaining results,*** as well as to new music.

WILDER
MASTER
PIANO
COURSES

While these Courses are *new*, and in many ways *radical*, they are long past the experimental stage, for they have proved successful with hundreds of students in the author's private teaching and in his classes at the *New England Conservatory of Music.*

Our Introductory Offer will be sent upon receipt of a postcard.

The Wilder Publishing Company Dept. E-6 West Newton, Mass.

complete the instrumentation, with the solo instruments which the pupils furnish. Instrumental music has a definite and dignified place in the program of any high school; and those that have not already incorporated it among the subjects offered to students are already far behind the "Band Wagon." Education is for boys and girls. Music is one factor in education and one means of approach to reach these young people while their tastes are being formed to live their lives as men and women of culture and refinement. Fed musical culture, they assimilate it as they do all other information. When leisure hours, which for mere lack of accomplishment have caused many to seek amusement which they were not equipped to improvise, the boys and girls who have had instrumental training can amuse themselves besides being able to entertain others.

Toot the horn; it spells:—

Schools should furnish the unusual instruments.
Any pupil can learn what a good teacher can teach.
Famous composers, performers and conductors are men.
Every pupil can learn music.
Teach Boys to play an instrument.
Youth and culture prepares for effective citizenship.

Future culture is mature taste now being implanted.
Invest in music for it unifies the mass.
Rhythm is the grace of poetry and music.
Seldom is music an unwelcome guest in the home.
Teachers of music help parents to guide the young.

Violin Questions Answered Personally by Mr. Braine

Concert Pieces.

J. I. B.—Concert pieces for the violin vary greatly in length. If you are planning to compose such pieces it would be a good idea to examine carefully a number of the most successful violin compositions and make your compositions of similar length. 2—The compositions which you name are all masterpieces and have had an enormous vogue all over the world.

Acquiring Velocity.

W. J. S.—If you have a real talent for the violin, as regards velocity playing, you can work the studies you name up to the proper speed by playing them slowly at first and gradually increasing the speed. If you find you are playing wrong notes at the higher tempo reduce the speed until you can play the study correctly. A metronome is a great help in working up studies of this character. Set the speed a little faster each day or two or as you are able to play faster. Maybe you do not practice enough. Try putting an hour a day on just one of these studies, and see if you get results. Some people do not have the gift of velocity playing and are never able to play very fast passages on the violin, no matter how much they practice.

Slurred Notes.

V. P.—The upper slur in the passage you send means that the last note in the passage is to be included in the same bow with which you play the first four slurred notes. The bow makes a minute stop, of a fraction of a second, between the last two notes of the passage; otherwise, these two notes would sound as if tied. 2—Pupils should take up the studies you name when they have had sufficient preparation for them. This is where the teacher's skill comes in—to know just when a pupil is ready for a set of studies. No set rule can be given.

Late Beginner.

C. H.—You have too late a start to become a thorough violinist, but if you drop everything, go to a good teacher or conservatory and practice five hours a day, you might become a successful teacher. However, I should not like to make any predictions as to your success without a personal examination. 2—I could not tell how soon you would be ready for the compositions you name without hearing you play. 3—There are many opportunities for teachers of music in the public schools. There is no "average" salary, as it varies so much in different parts of the country and according to the work to be done. Possibly it might range from $800 upwards. Supervisors of music in cities of any size get from $2,500 upwards to possibly $5,000 or $6,000. 4—Opportunities for working one's way through conservatories in the large cities are scarce. Still, it is frequently done, though usually through work not of a musical character. 5—If your teacher cannot teach you "wrist" bowing you should try to find one who can. You could practice this bowing on the first study in Kayser, which you say you study. At first play each note four times, then as written. 6—You can get a good toned old violin for $250 and upward, but not one by one of the famous makers. An old Mittenwald violin would no doubt be what you want.

A Possible Virtuoso.

M. R.—It might be possible for you to become a virtuoso violinist, starting with your present foundation, if you have talent of the highest order. However, I am doubtful about it, since you say you were pronounced "tone deaf" by your teacher at the start, although you say you now play in tune. 2—By all means change your instructor, who is a 'cello teacher, to a violin teacher. The violin and 'cello have much in common, but a 'cello teacher is not fit to develop artist violin pupils. Go to a first-class violin teacher and after a few lessons he can advise you as to how far you can hope to advance in the profession. 3—Would advise you to keep on with your viola studies.

Three Meinels.

G. M. R.—I could not advise you as to what you could hope to accomplish without hearing you play. You had better go to the nearest large city, near your home, play for some good violinist and get his opinion. 2—There were three Meinels who had some reputation as violin makers, but I could not say whether your violin is genuine or an imitation without an examination. The only way is for you to send your violin for examination to one of the firms who deal in old violins and who advertise in the ETUDE.

"Strad" Marketing.

W. R. F.—There is not one chance in a million that your violin is a genuine Stradivarius. Before you try to sell it at a price which such a violin would bring, if genuine, you ought to have it examined by a good expert.

Cramped Bow-Arm.

E. K.—It would be better to see a physician about the pain in your arm and side. The tense state of the muscles of your right arm when playing comes from lack of relaxation. Try dropping your arm perfectly loose before you take hold of the bow, and then, when bowing, try to continue the loose, relaxed state of the muscles which you felt when your arm was hanging limp. Bow very lightly, without pressing on the bow at first, to learn this relaxed bowing. Your best course would be to take a few lessons from a good teacher. He could show you more in a few weeks than you could learn by yourself in months, and the chances would be that what you learned by yourself would be all wrong.

P. Leak.

E. L. C.—Sorry I cannot trace the violins of P. Leak, 1880. His name does not appear in any of the lists of eminent makers. Your violin may be a good one for all that, as obscure violin makers often turn out a masterpiece.

Moritz Glase.

F. N.—Sorry I cannot trace the violins of Moritz Glase. There are thousands of violin makers, unknown to fame, however, who often have done creditable work.

Violin Bowings.

J. E. McN.—The little work, Violin Teaching and Violin Study, Eugene Gruenberg, describes the different kinds of violin bowings and how to execute them. It would be much better, of course, to study violin bowing under a good teacher if one is available.

VEGAPHONE
The Artist's Choice

The Versatile Instrument

THE banjo is an essential in every dance orchestra and is the ideal instrument for entertainment. It is easily mastered and can radiate pleasure either by itself or when harmonizing with other instruments. It is welcomed in every social gathering and never fails to win admiration. The Vegaphone banjo represents the highest achievement in appearance, tonal beauty and brilliancy.

TRADE MARK WURLITZER REG.
THE WORLDS LARGEST MUSIC HOUSE

200 Years Ago in the little Saxon town of Shoeneck lived Hans Adam Wurlitzer, Master Violin Maker. His shop was a gathering place for musicians of the time, for he was a true craftsman.
When he died his shop passed into the hands of his eldest son, and for seven generations, down to the present day, the descendants of Hans Adam Wurlitzer have carried on his work.
In every Wurlitzer instrument you will find a quality, a character, that could not come from mere excellence of manufacture. It is the heritage of these seven generations of music craftsmanship.

Try any Wurlitzer Instrument *in your Own Home*

YOU may now have any Wurlitzer instrument for a week's free trial in your own home. Examine the instrument, show it to your friends, play it as much as you wish. No obligation to buy — no expense for the trial. We make this liberal offer because we want you to try for yourself these wonderful instruments, the result of 200 years' experience in musical instrument building.

Easy payments are arranged to suit your convenience.

This is your opportunity to try a famous Wurlitzer instrument in your own home.

Send for New Catalog

The greatest musical catalog ever published! Over 3,000 articles—every known instrument described and illustrated; many of them shown in full colors. Gives you lowest prices and all details of Free Trial, Easy Payment plan. All sent FREE—no obligation.

KAY LABORATORIES Dept. K-666
186 N. La Salle St. Chicago, Illinois

As a means of contributing to the development of interest in opera, for many years Mr. James Francis Cooke, editor of "The Etude," has prepared, gratuitously, program notes for the production given in Philadelphia by The Metropolitan Opera Company of New York. These have been reprinted extensively in programs and periodicals at home and abroad. Believing that our readers may have a desire to be refreshed or informed upon certain aspects of the popular grand operas, these historical and interpretative notes on several of them will be reproduced in "The Etude." The opera stories have been written by Edward Ellsworth Hipsher, assistant editor.

Thaïs

Although "Thaïs" is not regarded by all critics as the very greatest of Massenet's twenty-five operas, it has, nevertheless, become the work by which the composer is best known in America. The opportunity it affords for a prima donna of dramatic ability and physical beauty has made it a favorite rôle with all singers who aspire to something more than the operas of the trill and cadanza type.

Massenet was born at Montaud, near St. Etienne (Loire), France. He was French in all his instincts, and his highly polished rôles, fired with deep emotion, but without evident pedantry, are characteristic of his nation. He was a pupil of Laurent, Reber, Savard and Ambroise Thomas. In 1863 he won the *Grand Prix de Rome* at the Paris Conservatory. From 1878 to 1896 he was the professor of composition at the conservatory in Paris. His later years were devoted to composition and the production of his works. Like Wagner, Meyerbeer, Verdi, Donizetti and some others, he is essentially a composer for the footlights, although some of his other works have received recognition.

"Thaïs" was written, originally, to provide a rôle for the very beautiful American singer, Sybil Sanderson. Since then the opera has always demanded a singing actress of great physical beauty, to insure success. The libretto of "Thaïs" is virtually in a kind of rhymed prose, *"Poesie melique,"* the librettist called it.

When the opera was brought out at the Opera in 1894, it was called a lyric comedy—comedy despite the fact that the heroine dies at the end. It was Hammerstein who first brought the work to America, with a premiere at the Manhattan Opera House in New York, November 25, 1907, with Mary Garden in the title rôle. It was presented at the Metropolitan in New York in 1917.

The richness of "Thaïs," as with other Massenet works, lies very greatly in the notable orchestral treatment with which this extremely gifted composer virtually costumes his characters. His style is characterized by the most exquisite finish, flowing melodies and charming and distinctive orchestration. In the final duet between *Thaïs* and *Athanael*, and in other parts of the opera, the real musical values, from the standpoint of composition, rise to heights of creative originality.

Apart from the *Meditation*, the baritone solo *Voilà donc la terrible cité* (*That Awful City I Behold*), and the soprano solo, *"With Holy Water Anoint Me,"* are among the best-known numbers from this vivid and passionate score.

The Story of Thaïs

The libretto is by Louis Gallet and founded on the novel of Anatole France. Time, early Christian Era. Place, Alexandria and Egyptian Desert.

Act I, Scene I. *Camp of the Cenobites near the Nile. Athanael*, a Cenobite monk, returns from Alexandria fired by the story of the beautiful courtesan *Thaïs*. Against the advice of his superior, *Palemon, Athanael* announces to his brother monks his intention of returning to Alexandria to win *Thaïs* from her ways of life.

Scene II. *House of Nicias in Alexandria. Athanael* is warmly greeted by his old friend *Nicias* who scoffs at his plans. *Nicias* has *Athanael* garbed in rich robes to await the coming of *Thaïs*. To *Athanael's* declaration that he has come to teach her the ways of salvation, *Thaïs* replies that she believes only in joy and love and pleasure. Horrified by the plans of the evening, *Athanael* leaves, declaring he will see her at her home.

Act II. Scene I. *Apartments of Thaïs.* Resisting the seductive charms of *Thaïs, Athanael* pleads with her for the higher life and love to come. Though *Thaïs* is at first affrighted and then defiant, *Athanael* declares she will repent.

Scene II. *A Street in Alexandria. Thaïs* approaches *Athanael,* renounces her life of pleasure and declares she will follow where he leads. To his urging that she destroy her earthly possessions, *Thaïs* allows *Athanael* to set fire to her palace. *Nicias* and his convivial companions arrive. They see *Thaïs* in her somber robes, become incensed at her conduct, and threaten to hang *Athanael. Nicias* scatters gold coins to divert his followers and in the ensuing scramble *Thaïs* and *Athanael* escape.

Act III, Scene I. *An Oasis.* On their way to a convent, *Thaïs* is almost exhausted and *Athanael* supports her. *Saint Albine* and the *White Sisters* meet them. *Athanael* gives *Thaïs* into their keeping—she, happy with a spiritual peace; he, troubled at the parting because of the earthly love awakened in his heart for her.

Scene II. *The Cenobites Camp.* His former peace dissipated, *Athanael* thinks only of *Thaïs*. In a vision he sees her first as the courtesan, then as a dying nun. Awaking, he rushes into the night to seek her retreat.

Act III. *Convent of the White Sisters. Thaïs*, exhausted by penance, is reverenced as a dying saint by the *White Sisters. Athanael* arrives and in frenzied love implores her to return to the earthly life. A vision of heavenly bliss deafens her to his entreaties. With a vision of heaven before her and the rustle of angels' wings about, *Thaïs* expires with happiness aglow in her face. *Athanael,* with love and faith gone, falls despairing.

What Every Piano Teacher Should Know About School Credits for Outside Music Study

THE importance of the cultural value of music is so widely recognized by America's leading educators that there is a widespread movement to accept the work done by piano pupils, with outside teachers, as an equivalent to one of the school academic subjects. To gain full advantage of this opportunity it is important that the teacher be able to demonstrate to the school authorities a comprehensive, logical course of study employed in the training of her pupils. The information necessary to the preparation of such material is contained in our new

Extension Department Bulletin E16, entitled:

A Comprehensive Syllabus, Outlining Requirements for a Course in Piano Playing as a Basis for School Credit for Music Study.

One copy of this syllabus will be sent free to applicants who enclose 5c in postage stamps.

National Academy of Music

JUNIOR ETUDE

CONDUCTED BY ELIZABETH A. GEST

Musical Terms (No. 9)

THIS is the ninth list of musical terms. Have you copied them all in your notebook?

Obbligato—An indispensable solo part in a concerted composition.

Octet—a composition written for eight instruments or voices.

Opus—abbreviated Op. A composition. Used with the number of the composition in series; as, Sonata, Op. 9, means the ninth composition of that particular composer.

Oratorio—A large composition for chorus, orchestra and solo voices, to be given without scenery or costume, the words being on a sacred subject.

Overtones—a series of faint, high tones, produced by an instrument or voice when vibrating to make any tone.

Overture—an orchestral introduction to an opera or other large work.

Passionato—in an impassioned manner.

Patetico—pathetically.

Pastorale—a composition describing or suggesting rural scenes.

Pause—prolonging a beat beyond its rhythmic duration.

Thoughts

I used to think
When I grew up
I'd practice nothing more,
But sit and play
The pretty things
That I had learned of yore.

And then I thought
That would not do
Because I soon found out
That practicing
Is something that
One cannot do without.

And now you see
My mind's made up
To practice every day.
Whether I
Am young or old
I'll always love to play.

Question Box

DEAR JUNIOR ETUDE:

How do you pronounce "Humoresque?"

Answer. Pronounce *Humor* as it is pronounced in English and add *esk*.

DEAR JUNIOR ETUDE:

Will you give me names of some easy Sonatas which I can play?

Answer. As a rule, sonatas do not have any "names" but are compositions written in "sonata form." Do you know what this means? If not, look it up or ask your teacher. Some of the best-known simple sonatas for you to play are by Beethoven, Haydn, Mozart and Clementi.

The Waterfall

The waterfall flows ever on
Over the rocks and stones,
And ever so, and even so
It musically moans.

It changes not from year to year
But gives forth all it holds;
Sometimes in winter, stops awhile
Till melt its frozen folds.

And then in spring it dashes forth
And sings its happy song;
It has its little work to do
And does it all year long.

I hope that I may do my work
In just this happy way;
And when I've done it several years
I'm sure that I can play.

True Knights of Labor

By Rena Idella Carver

IT was a beautiful September morning. Rosalia had begun practicing but she soon grew tired and walked to the open window with a sigh, "I almost wish I were a dumb animal and did not have to work."

Outside a bee buzzed angrily, "There you stand watching us gather our winter store and you say we do not work. A bee will work herself to death for the sake of the sisters she has never seen, but the bee idlers—the drones—are put to death. Just suppose that human drones were put to death!" Then, after drinking deeply from the beautiful flowers, she vanished.

A robin alighted on the window ledge and Rosalia remembered the painstaking work of the robins in building their nest, the patient brooding of the mother and the tirelessness of the father and mother birds in feeding those crying baby mouths.

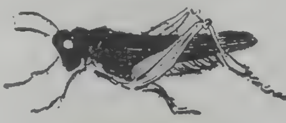
The rattle of the milkman's bottles made her think of the cows in the country and their work. A heavy dray horse drawing a wagon load of trunks came up the avenue and Rosalia could not but admire the animal toiling so faithfully.

Looking down she noticed the ants at work. The story of the ants and the grasshoppers came to her mind. A family of ants was hard at work filling the cellars of its underground house with food for winter. Some grasshoppers stopped to watch them, they laughed at the ants and called them foolish creatures to spend the beautiful summer working, instead of dancing and enjoying themselves. When the summer was over, the ants went into their snug little house and they were nice and warm all winter with plenty to eat. But the grasshoppers had no house and no food and they soon died.

A voice called, "Come, Rosalia, We are going to see the parade now."

Rosalia skipped out of the room answering, "Yes, Mother, I am coming."

As Rosalia watched the big procession, the beautiful floats, the huge wagons, and listened to the stirring band music, she began to feel that it would be interesting to be a Knight of Labor. Then the lecturer told about a good worker who was honest and earnest and ready and willing to work. He said we find pleasure in doing work if we do it well. We must care for the work for work's sake, if we are going to be true Knights of Labor. As she went home she remembered how happy she had been when she had finally conquered a hard phrase, or played a scale ten times correctly, or played her piece perfectly.



When she sat down to her piano again, she breathed the hope that she might become a true worker.

The Sound Fairies

By Edith M. Lee

MANY years ago people believed in fairies. When anything happened which they could not understand, especially if they heard strange sounds, the people said that the fairies were abroad—for good or ill.

For instance, if the young folks went out to dance, and in a quiet moment heard a tap-tap-tapping sound they thought that they had heard the cobbler fairies at work making shoes.

Another common belief was that by putting on a little red cap the wearer became invisible to world people.

Suppose we make some fairies of our own and call them Sound Fairies; and let us try to make only good sound fairies. Sound fairies can be made with a mechanical musical instrument like the harp or piano, or with the voice. There are many beautiful sound fairies in nature if our ears are tuned to hear them. Suppose you begin by making good sound fairies the next time you practice. Every perfect note will be a good fairy. But if you let mistakes creep into the practice hour, then the bad sound fairies, in ugly colors, will go tumbling and shrieking among the beautiful sound fairies and spoil all the music which the good sound fairies have made.

You cannot remember the first sound that you loved, but I know what it was. It was your mother's voice. Once a little boy was very much hurt. When the little fellow could speak he said, "Please talk to me, mother." And when the mother saw the big tears running down his face, the loving sound fairies came quickly in a "once upon a time" story, that started like this:

"Once upon a time a little boy was lost in a big wood, and the tears began to come and to roll in great drops down his face. And the little wood people all dressed in brown and green ran out from behind the bushes and played ball with the big round tears, and by and by the little boy forgot that he was lost and began to laugh." But it wasn't the story that made the little lad forget his troubles as much as the sound fairies of his mother's voice. There are so many harsh, ugly and unkind sounds in the world, so many of the shrieking, jazz music fairies that it is going to keep you little music lovers very busy with voice and instrument to make enough beautiful sounds to drown the others.

DEAR JUNIOR ETUDE:

I sent you a letter some time ago from Australia and have received many answers from America. There are very few aboriginals in Australia, and I have never seen one. English is the language spoken here and there are any number of schools and colleges here. These are answers to so many questions my American friends ask.

I still keep up my three hours' daily 'cello practice. Some time ago I passed my examination in the higher division and was the only 'cellist in Victoria to pass with honor. The examination was held in Melbourne, and was given by the Royal College of Music of London. I have earned about forty pounds since last Christmas. (I don't know how much that would be in American money.) I hope to have a better 'cello than the one I now own. I would like to have an old Italian one, but don't suppose I will ever be lucky enough to possess one.

From your friend,
JEAN SMITH (Age 13),
Frankston, Melbourne,
Victoria; Australia.

Summer Time No. 3

SUMMER time is nearly over, and before the end of the month most of you will be back at school and starting music lessons again. Have you had a nice summer? Did you keep up your schedule that you read about in the JUNIOR ETUDE for July? And did you fix up your music according to the plan in the JUNIOR ETUDE for August? If you have, your summer has not been a wasted time.

Now before starting your lessons again, get a blank music note book, and in it write all the major and minor scales. Do not say that you do not know them all; for if you know how to do one, you know how to do them all, for they all follow the same model. Then write the chords at the end of each scale. Then in the back of the book make a list of all the pieces you have memorized, with the names of the composers. After their names put the dates of the birth and death and what country they lived in.

You will be pleased with yourself for having spent your summer this way; and your teacher will be a great deal more than pleased with you, and your work in the winter will be far superior than it would be if it followed a summer of idleness and wasted time.

START THE NEW SEASON WITH
THESE FOUR EXCELLENT NEW STUDY-BOOKS
SPECIAL INTRODUCTORY PRICES

CHARACTERISTIC STUDIES FOR THE YOUNG PIANIST—
FOR THE ATTAINMENT OF ARTISTIC PLAYING—
by Frances Terry

These "studies" are really remarkable on account of the fact that each one is based on a separate technical "problem"—has a definite educational feature—and is very melodious. They will prove most delightful "pieces" for the enjoyment of the pupil or for the Recital program. Seldom indeed are such real musical values combined with such attractive melody. Special Introductory Price—cash with order—.57c Postpaid.

These two books by Frances Terry have been most highly endorsed by many of our leading musical educators and printed testimonials will be distributed in a few weeks.

RECITAL ETUDES FOR THE PIANO—
by Frances Terry

These most excellent Etudes—like the Characteristic Studies—are unusually melodious and of a real musical value much desired. Of intermediate grade only—the separate defining titles are: Vigoroso, Giocoso, Agitato, Grazioso and Appassionata.
Special Introductory Price—cash with order—.57c postpaid.

ELEMENTARY THEORY AND PRACTICE BOOK
by Robert Bartholomew

Designed for use in normal schools, high schools, colleges and for private teaching. A combined text and work book.

THIS METHOD IS THE WORK OF A PRACTICAL TEACHER

It is simplicity itself. No complexity. No "research." Just "boiled down" facts. Bartholomew knows what he wants to say and says it in plain English; concisely, briefly. He writes from an experience covering many busy years.

HERE IS A "THEORY AND PRACTICE" SIFTED DOWN TO ACTUAL ESSENTIALS

The several pages of perforated music paper incorporated will be found a great convenience for written exercise work.
Special Introductory Price—cash with order—.57c postpaid.

FIRST STEPS IN HARMONY
by Chas. W. Landon

Here is practical and sensible foundation material presented in simple language easily understood by young pupils.

EAR TRAINING EXERCISES OF GREAT IMPORTANCE WHICH MAY BE SUNG OR PLAYED—AS DESIRED

Private and class teachers—both will welcome this book.

ALL THE UNDERLYING PRINCIPLES ARE FULLY DESCRIBED AND PROFUSELY ILLUSTRATED—

Special introductory price—cash with order—.57c postpaid.

HOW TO ORDER

Your local dealer will supply these books at the special introductory cash with order price—if you will mention this advertisement. You may order direct from us if you prefer. This special cash with order offer expires October 1st, 1924.

THE JOHN CHURCH COMPANY
CINCINNATI

NEW YORK
318-320 W. 46th Street

JUNIOR ETUDE—Continued

Junior Etude Contest

The Junior Etude will award three pretty prizes each month for the best and neatest original essay or story and answers to puzzles.

Subject for essay or story this month "The Value of Musical Puzzles." Must contain not over one hundred and fifty words. Any boy or girl under 15 years of age may compete whether a subscriber or not.

All contributions must be received at the Junior Etude Office, 1712 Chestnut St., Philadelphia, before Sept. 20. Names of prize winners and their contributions will be published in the December issue.

Put your name and age on upper left corner of paper, and address on upper right corner of paper. If your contribution takes more than one sheet of paper do this on each sheet. Do not put puzzles and essays on the same sheet. Do not use typewriters.

Competitors who do not comply with ALL of the above conditions will not be considered.

Contests are resumed this month, after Summer vacation.

Puzzle Corner

WHO AM I?

Lucretia Laurence Sheffield

(Each "I" or "me" is a term found in music.)

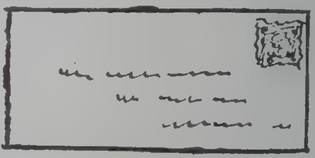
I'm used by the fisherman;
And I'm the fish he catches.
I'm an army officer,
And I unlock the latches.

I flow adown the valley,
My mistress sews with me;
I grow in the garden,
I'm the nicest way to be.

I'm a broad and level plain.
I dig the coal you burn.
I'm a common piece of soap.
I'm what the tired folks earn.

I'm wound around your packages.
I'm the knot that's made.
I am a real unkind remark.
I'm found where people trade.

I make a sum three times it's size.
On a kitten me you'll find.
I am a little letter
While I'm the name that's signed.



Dear Junior Etude:

I want to write and tell how much I enjoy you. About a year ago we organized a school orchestra and have engaged an instructor to train us. I am the pianist in the orchestra and we have good times together playing in public. There are about twenty in it. I have learned a good deal out of The Etude and my teacher gives me some pieces out of it.

From your friend.
Glea Beistel, (Age 13),
Pennsylvania.

Dear Junior Etude:

We certainly enjoy The Etude and look forward each month to the new issue.

I would like an explanation of the Composers Square Puzzle in the March number. The instructions were "Start any place in the square and move in any direction, skip no letter and do not move diagonally." Now the names of some of the composers cannot be spelled without moving diagonally.

From your friend.
Evelyn Laver,
Penna.

N. B.—Evelyn seems to be the only one out of the many who sent in answers to the March puzzle who noticed this discrepancy in the directions. As the directions say "move in any direction and do not move diagonally" they certainly contain a contradiction. This was an oversight and a mistake, as "move in any direction" was correct, and everybody evidently moved in any direction in working out the puzzle.

Dear Junior Etude:

I have not been taking The Etude very long, but enjoy it very much, particularly the Violinists' Etude, as I play the violin. My brother plays the 'cello and my sister the piano. I think this month's puzzle was particularly good.

From your friend,
Rachel Slayton,
New Hampshire.

Dear Junior Etude:

Your page is very good and it helps me to do better. I study music with my mother, who is a teacher; and I study dancing, too. My brother and I danced at my mother's last pupils' recital. My brother plays the saxophone in an orchestra.

From your friend,
Helen Statler (Age 10),
Ohio.

Dear Junior Etude:

Recently we had a music memory contest in which all the schools of the county took part. Two pupils from each school were selected to go to the finals. My brother and I were selected from our school and we tied for the banner with another school whose representatives were brothers. Twenty-four schools took part.

From your friend,
Ruth Wade,
California.

Dear Junior Etude:

I have been taking music lessons only
few months; but I love music and want
learn, and hope some day to play like m
music teacher. We have a music studio whe
we have pictures of famous composers on th
walls, and we have a musical library wit
stories about music and great musician
There are about twenty pupils, from seve
to thirteen, in our music club, which we ca
the Bach Club. We meet every Saturda
and our club colors are yellow and white, an
our flower the marigold. I hope other chi
dren may have the privilege of studyin
music in such a nice studio.

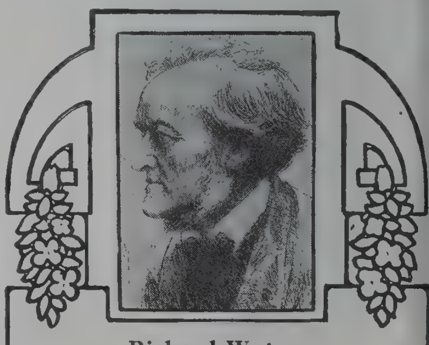
From your friend,
Bernadine Tabor (Age 10),
Indiana.

Dear Junior Etude:

I am a little girl eleven years old, an
though I do not take The Etude as yet, I us
our teacher's, and after a while my mamm
is going to take it for me.

I want to tell you of our music club. Ther
are just a few active members, but it is
live club. Then, too, on the wall of ou
studio there hangs a picture of six of th
great musicians—Mozart, Schubert, Bee
thoven, Wagner, Mendelssohn and Haydn—
and we "pretend" that these are members o
our club, and that makes us do our very bes
Once a month we invite others to attend.

From your friend,
Marietta Anderson,
Miss.



Richard Wagner

Born, Leipsig, 1813 *Died, Venice, 1883*

Greatest composer of the Music-Drama the world has known. He wrote the words as well as the music for his operas. Some of his best known works are "Tannhäuser," "Lohengrin," "Parsifal" and "Die Meistersinger."

Etude Portrait Series.

EARN A DIPLOMA
OR
# Teacher's Certificate
FROM
A Recognized School

Do you realize that there are hundreds of openings for trained musicians and with the present vigorous movement for developing Public School Music the demand for organizers, teachers and leaders is beyond the supply of qualified musicians? Everywhere there is a demand for trained teachers. You can fit yourself for a good paying position without the expense of leaving home. If you have a music class you can continue teaching at the same time you study.

WE BRING THE CONSERVATORY TO YOU
You Study with the best Teachers in the Country

Special Certificates Awarded Our Graduates to Teach in the Public Schools without Examination

Mr. George Clarke, of Wilson, Okla., writes: "Thank you for prompt delivery of Diplomas. They have been recognized by the State University and a life certificate issued me. Through them I have secured a position with an increase in salary of $50.00 a month."

Another graduate writes: "I have just been selected as director of the voice department in a Music College as a result of my lessons with you."

From another one we learn: "I was elected assistant supervisor of the grades and junior high."

One studying in New York City states: "I received full two-years' credit for my work with you."

A teacher who has had four courses with us writes: "The instruction in your Extension Courses is the best possible for one to obtain. The person who knows and can use his knowledge to enable him to do as well and just a little better, usually gets ahead—regardless of the method by which he received his information—whether in college or with a book by an open fire-place, or during his spare moments under the written direction of a teacher a thousand miles away. This is my third year in charge of the Music Department in the Normal School. I have nothing but praise for your courses, which have been of inestimable value to me in my work."

Study in Your Own Home with the Best Teachers in the Country

No longer is it necessary for the ambitious musical student to incur the expense of leaving home to study at an expensive resident conservatory. By the University Extension System the masters' methods are taught in the home by easily understood lessons sent by mail.

The Piano student has the marvelous teacher Sherwood to demonstrate just how he secured his incomparable effects. The Cornetist studies with the master Weldon; Crampton trains the voice of the singer; Heft shows how to interpret the soul of music on the Violin; Rosenbecker and Protheroe take the pupil through every phase of the study of Harmony; Protheroe gives his authoritative instruction in Choral Conducting; Frances E. Clark gives the most practical methods in Public School Music; Frederick J. Bacon, the great banjoist; Samuel Siegel, world-renowned mandolinist, and William Foden, famous guitarist, give their methods for mastering these instruments. The History Course, including Analysis and Appreciation of Music by Glenn Dillard Gunn, and Advanced Composition by Herbert J. Wrightston, are the most advanced courses we offer. The course in Ear Training and Sight Singing by F. B. Stiven, Director of Music at the University of Illinois, is our latest course.

More than 200,000 ambitious men and women have gained proficiency in these various branches of music by the University Extension Method. And to you we offer the same advantages which were given to them.

This Is *Your* Opportunity—Mail the Coupon TODAY!

Fill in the coupon below—send it now for four lessons and our late catalog. We will give you full details of our offer to teachers and students, and the offer calls for samples from one of the courses. Get the catalog and lessons—then decide.

A DEPARTMENT OF INFORMATION REGARDING

New Music Works

AND OTHER MATTERS OF INTEREST TO MUSIC BUYERS

The Fall Bargain Offers of the Theo. Presser Co.

On other pages of this issue considerable space has been given to the presentation of final introductory offers on recent publications. These are genuine bargains, the profession having an opportunty to purchase works at quite a saving from regular prices.

A careful perusal of each and every item in the offer will repay anyone using music publications at any time. The main purpose in sacrificing the fair profit regularly necessary in the sale of these works is to gain a wide acquaintance for them, virtually advertising them upon their own merits solely.

All works offered as FINAL INTRODUCTORY OFFERS are ready for immediate delivery, those offered as ADVANCE OF PUBLICATION OFFERS are in preparation and as soon as ready will be delivered to those who have sent in orders in advance of publication.

Don't neglect looking over these offers before the special low prices are withdrawn.

Mail Order Buying a Boon to Music Teachers

A tremendous portion of all the business of this country is conducted through the mails, and a great majority of the music teachers of the country secure their teaching material by mail orders.

The mails have made it possible for teachers in all parts of the world to have access to the most complete collection of music publications; to have the advice and suggestions of experts upon teaching material; to secure desired publications with a minimum expenditure of time; to enjoy the privilege of examining new publications right in the studio; to have a stock of music in the studio all season (paying only for that used), and to have a convenient charge account upon music supplies.

The Theo. Presser Co. has originated and perfected the conveniences and economies of mail order service to music buyers, and for forty years has been serving through the mail thousands of patrons in practically every village and town in the United States where there is a music teacher.

Every member of our organization is instilled with the idea of rendering prompt, accurate and courteous attention to each and every transaction, and the policy of the company is to give the teacher every advantage in prices and every possible liberality in service.

Teachers everywhere are invited to test our methods. Open a pleasant and profitable business relationship by sending now for teacher's catalogs, details of "On Sale" plan, etc. These will prove helpful to any teacher.

The Value of New Music on Sale to the Profession

While this is being written we are sending to many far-sighted teachers packages of New Music on Sale. Some of this material will be utilized for summer classes, but there are many teachers making a choice out of these new music shipments of material for use in teaching during the 1924-25 season.

Teachers who as yet have not given attention to teaching material for the teaching season about to open will find it a great help to secure a package of material for examination. This the Theo. Presser Co. will be glad to send upon receipt of advice as to the kind of material desired, the number of pupils to be cared for, and whether easy, intermediate or advanced pieces or studies are wanted.

Such service may be requested by teachers at any time. Another help to teachers is the regular delivery of packages of new music during the teaching season. Packages of new piano music, for instance, are made up each month and sent according to our "On Sale" plan. Such music may be kept on hand by the teacher all season, returns being made at the close of the regular teaching season in June.

If you want further details upon the New Music on Sale packages these will be sent to you cheerfully. The first package will go out in October and we already are scheduling progressive teachers' orders for these packages during the 1924-25 season.

We would like to have the opportunity of proving to you that this is a valuable service to teachers, and we would be glad to place your name for packages of new music in any of the following classifications: Piano, Vocal (Sacred and Secular), Pipe Organ, Violin and Piano, and Octavo Music (Sacred or Secular for Mixed, Men's and Women's Voices).

Advance Offer of a Master Sacred Song

On October first a sacred song that surpasses any sacred offering we have seen in recent years will be placed on the market by the Theo. Presser Co. The title of this sacred song is "Eternal Light" (*Lux Eterna*), by A. Buzzi-Peccia, composer of "Gloria," a song offering similar to Stephen Adams' "Holy City."

During the month of September singers and voice teachers have an excellent opportunity to make sure of a first copy of this splendid song. Orders will be taken in advance of publication, delivery to be made October first. There is always a pleasure in being among the first to use a number that is destined to become a great favorite and a "standby" of leading vocalists for many years.

"Eternal Light" opens with a full, rich instrumental introduction of but a few measures leading to a short recitative that is effective and singable; then the voice awaits the instrument, going into A flat major and leading into C minor. The whole atmosphere of the accompaniment and vocal part is true to the import of the text, and when the song returns to C major, the key in which the opening chords are struck, there is a strain of beautiful melody that gives the singer opportunity for full, rich and expressive singing that makes this an unusually satisfying supplication in song. There is plenty of opportunity for the singer to gain the appreciation of listeners in the interpretation and contrasting presentation of different phrases, and this is a point that will recommend it highly to voice teachers. Throughout the accompaniment is most suitable for the organ. The vocal work lends itself to practically all voices. The range of the high key is from C to F (optional G). The low key range is B flat to E flat.

In registering your order in advance of publication for this song, remit 25 cents net, postpaid, for each copy desired. It is safe to predict that when you receive the copy ordered that you will feel satisfied the foregoing description is a meagre presentation of the exceptional merits of the song.

Moving Picture Organists and The Etude

The music in The Etude and the publications of the Theodore Presser Company may be played until further notice in moving picture houses and elsewhere without special permit. This also applies to radio broadcasting.

Hundreds of moving picture organists find The Etude invaluable in their work. Here is a specimen letter just received from an organist:

"Have taken The Etude since 1900 and have saved all my numbers. I find The Etude very helpful for my programs. In fact, I was playing at the Le Claire Theatre this spring and my entire program for the picture 'The Rendezvous' was taken from The Etude."

When one considers the fact that the many interesting articles in The Etude keep the profession informed upon vital musical subjects and that the twenty-four-page music supplement in each issue furnishes so much music that theater pianists and organists can utilize it, it can be realized readily that there is no better $2.00 investment for anyone in this field than a year's subscription to The Etude.

September Low Price Magazine Offer

Note our advertisement on the inside back cover showing splendid combinations of high-class magazines with The Etude. These prices are exceptionally low and will advance about the end of October. Here is your opportunity to stock up on your reading matter at a substantial saving in money. We do not guarantee these prices longer than sixty days before the advance takes place.

Flower Lovers, Attention!

For fall planting we have been fortunate in securing the following two groups of plants.

Three grand Peonies; red, pink, white. The Peony is truly a noble flower, rivaling the rose in brilliancy of color and perfection of bloom, while greatly surpassing it in size and stately grandeur. They are the easiest plants to cultivate, of most vigorous habit, and free from disease and insects. The foilage is rich, glossy and ornamental even when plants are not in bloom, but they make a grand show when in flower and are gaining in popularity every year. Plant the roots any time before the ground freezes, and if put in this fall should bloom next spring. Peonies are hearty and may be left undisturbed for a number of years.

One root your selection for only one new subscription; all three for three subscriptions, postpaid.

Six Iris; blue, purple, white, yellow, pink. This is the improved Iris, gorgeous in effect and wonderful in color. It is well entitled to the name of the "orchid of the hearty garden." Iris is adapted to almost any condition in climate and it is a magnificent, hearty coronal. We have made arrangement with a reliable and well-known specialist to supply our subscribers with blooming size roots for fall planting. Two roots for only two new subscriptions. The entire collection of six for three new subscriptions. Postpaid.

Swindlers

Daily receipt of complaints from different sections of the country make it necessary for us to again warn everyone against placing subscriptions for Etude with strangers. Try and give your order to our local representative. It is safest. If you prefer sending your subscription direct, do not send currency unless it is registered. The best way to remit is by personal check or United States Post Office Money Order.

Change of Address

Subscribers returning from their summer vacations will help us materially in requesting change of address by giving us both old and new address. Our files are arranged geographically, and unless we have both addresses the name cannot be located on our list.

Attractive Rewards for Premium Workers

Webster's Dictionary

A splendid Webster's new, modern English Dictionary, bound in seal grain leatherette, flexible back. This dictionary is profusely illustrated and is one of the most desirable volumes which we have ever been fortunate enough to offer to our friends. Two new subscriptions will bring the dictionary.

Gold-Plated Pencil

Indispensable for the music teacher or will make an attractive gift; one new subscription.

Shears

An eight-inch spring tension Shears of fine steel; only one new subscription.

Fountain Pen

For ladies or gentlemen. Indicate your choice. A splendid self-filler of standard make which will last with reasonable care for years. Four new subscriptions.

TEACH THE INSTRUMENT EVERYONE WANTS TO PLAY

THE modern Saxophone is the most popular instrument in America today. Thousands of beginners—boys and girls—young men and women—are buying instruments and learning to play. They are teaching themselves, because there are few teachers.

But this great class of beginners can go only so far with home study and printed lessons. The faster they advance, the more they see the need of personal instruction. Hundreds of others, musically inclined, would eagerly take up this easy instrument but for want of a teacher. In every town—in your town—the Saxophone teacher is in demand.

If you teach music—or if you are a successful musician—this is your opportunity. With your fundamental knowledge you can master the Saxophone in a few weeks. You'll find it the easiest instrument you ever tried to learn. Even kids, who have never played any instrument, learn scales in an hour and play tunes in a week. Think what *you* can do with an easy instrument like this. It won't take you any time.

It's So Easy to Teach

And it is just as easy to teach, because it *is* so easy to learn. You get such quick results. You can soon make a reputation for yourself as a Saxophone teacher and you'll enjoy it. It needn't interfere at all with your regular work.

In Los Angeles, Kathryne E. Thompson, now Director of the Southern California Saxophone Band, has become nationally known through her skill in teaching the Buescher Saxophone, particularly to boys and girls. She is one of many who started from your position. You, too, can succeed as a Saxophone teacher, if you will only make the start.

* * *

Say "I'll do it Today"—There's no obligation in asking for more information. If you don't want to clip the coupon, just write a postal. We want to tell you all about this opportunity to greatly increase your income by teaching the Saxophone. We'll tell you just how to start and send you free a copy of our book, "The Story of the Saxophone," illustrating the first easy lesson.

Do this today. Remember there's no obligation. And you want to know all the facts.

The ETUDE MUSIC MAGAZINE

Price 25 cents

OCTOBER, 1924

$2.00 a Year

The Greatest Collection of Piano Music in the World!

MASTERPIECES OF PIANO MUSIC

This book is established beyond question as the most important collection of piano music in the world for teacher, student or amateur music lover. It comprises 536 pages of the best classical, modern, light, sacred and operatic piano music, containing 218 compositions by the greatest masters. Recently purchased for $10,000 by the Mumil Publishing Co., and republished on splendid paper with durable and attractive paper and cloth bindings, it not only appeals to the musical desires of everyone, but it is officially used in musical memory contests all through the U. S. as the most authoritative collection of piano music in the world.

Be Sure to Read This Complete Contents of 218 Musical Masterpieces

The World of Music

Felix Weingartner recently conducted a performance of "Die Meistersinger" at the Charlottenburg Opernhaus (Berlin), his first appearance in that city as an operatic conductor since he left the Royal Opera twenty-six years ago.

"Nerone," for its nine presentations at La Scala brought in receipts to the amount of $125,000. The house was sold entire for each performance, the advanced prices charged for the first two being abandoned for the following nights.

Rimsky-Korsakoff's farm-home near Leningrad, where the composer lived in his later years, has been allowed to remain in the possession of his children and grandchildren, contrary to the general practice of the Soviet government. of confiscating all lands of the bourgeoise. Because of the composer's services to Russian music, this was a special concession in answer to a petition of his descendants.

A Music Conservatory in Palestine is to be established as a memorial to the Jewish soldiers who died in the World War. Dr. Joseph Silverman, rabbi emeritus of Temple Emanu-El, New York, has been chosen as chairman of the directors.

Mrs. Jack Gardner, the "lady bountiful" of many a young aspiring musician, died at her home, "Fenway Court" (Boston), on July 17.

The Olympic Games Music Medal offered by the committee in charge of the event which took place in Paris this summer, drew but a small response from composers. "That quantity alone was not invited is clear from the fact that one of the manuscripts received was *Un Projet de Divertissement pour Jeux Olympiques* (*A Scheme of Amusement for the Olympic Games*), for which were required a chorus of 4000, 600 trumpets, 300 clarinets, 100 doublebasses, 200 tubas, and 50 bassoons. Unhappily for the composer, who is nameless, the jury 'estimated that there is very little of music in this composition'—which is quite nice."

The Oldest Chickering Piano in private ownership, has been found in the possession of Lewis Herreshoff of Bristol, R. I., a member of the celebrated family of yacht builders. The grandfather of the present owner purchased the instrument personally from Jonas Chickering, on December 18, 1823.

Raoul Laparra has received the coveted prize offered by the Institut de Nicolo.

The Harrisburg (Pa.) Civic Opera Association is the last to join the ranks of these promising organizations which are springing up throughout the nation. Italy, at the present rate we shall soon have as many as you!

Carl Busch, veteran musician of Kansas, City, Missouri, has been decorated as a Knight of the Order of St Olaf, by King Haakon VII of Norway.

Leopold Auer, the distinguished violinist and teacher, married in the New York City Hall on June 24th, Mme. Wanda Bogutska-Stein (for twenty-two years his accompanist). The groom is seventy-nine years of age, while the bride is thirty years his junior.

Frank H. Shaw has been called from his position as director of music of Cornell College, Mount Vernon, Iowa, to a similar one at Oberlin College, Oberlin, Ohio, of which he formerly was a student.

Galli-Curci established a new record for the Hollywood Bowl, if not for America, when she sang on June 5th to an audience gathered from one hundred and sixteen cities and paying admissions to the amount of twenty-five thousand, nine hundred and twenty-five dollars.

A College of Music costing $600,000, with an endowment of two millions, is a part of a new university to be established at Burbank, near Los Angeles, California, by a gift of $11,400,000 from an unnamed altruist.

Eugène Ysaye, the favored son of Liége, has been honored by having a portrait of himself, by the eminent Flemish artist, Richard Heintz, presented to him by the city.

A Harp 3,700 Years Old has been discovered near the Euphrates. It is one of the oldest known to be in existence and has been shipped to the Louvre.

The Organ in "Old Peach Church," near Mechanicsburg, Pa., said to be the second pipe-organ built in America, and installed in 1807—with six stops and three hundred pipes—is still in use.

Igor Stravinsky is announced to conduct in the next season a series of concerts by the Philharmonic Society of New York, the oldest orchestral association of America.

The North American Saengerbund celebrated its "Diamond Jubilee" at its meeting in the Chicago Coliseum, June 11-14. Instituted at Cincinnati, in 1849, by three singing societies of Cincinnati and one each from Madison, Indiana, Louisville, Kentucky, and Columbus, Ohio; it has grown to have one hundred and fifty-one affiliated organizations with a total membership of three thousand, seven hundred and eighty. Along with this it has been, directly and indirectly, a mighty influence towards making America musical.

The 204th Three Choirs Festival will be held this year at Hereford (England) Cathedral. The festival is held for the benefit of the widows and orphans of the clergy of this and two neighboring dioceses, deriving its name from the union of the choirs of their three cathedrals. Mendelssohn's "Elijah," Handel's "Messiah," Elgar's "Dream of Gerontius," Rossini's "Stabat Mater," Brahms' "Requiem," Bach's "B Minor Mass," along with several minor works, will constitute the musical fair. A regular Lucullian feast! But does it not whet the appetite in these Jazzified times!

The "Grand Old Organ" of Albert Hall of London is to be restored and modernized at an expense of about one hundred thousand dollars (£20,000).

Princeton University is to increase its musical equipment by the installation of a large modern organ in its new Chapel which is to cost one and a half millions of dollars. This is to be one of the finest church buildings in the United States as well as one of the most imposing college edifices in the world.

The Vienna State Opera Company is reported to be engaged for a series of fifty Mozart performances in the United States next season.

Purcell's "Dido and Aeneas" has lately had its first production in Germany, at Hamburg. Thus do the works of genius gently percolate!

"The Passion of Christ," a pageant with its musical score made up from the works of Don Lorenzo Perosi, was recently given on a grand scale at Milan, on a specially constructed stage in the Palace of Sport.

"Juliet and Romeo," based on a French play and having but a slight resemblance to Shakespeare's work, is the latest opera from the pen of Zandonai whose "Francesca da Rimini" is familiar to America.

The Chicago Civic Opera Company will begin its season on November fifth, by a production of Ponchielli's "Gioconda" with Raisa, Meisle and Rimini in the leading rôles and Polacco conducting.

"The Echo," an American opera by Frank Patterson, will be presented at the fourteenth biennial convention of the National Federation of Music Clubs, at Portland, Oregon, in June, 1925.

Richard Strauss, on his recent sixtieth birthday anniversary, received the order "Pour le Mérite (For Merit)" from the Prussian government.

Giovanni Sgambati has been memorialized by a tablet placed on the house where he lived for thirty-seven years in the Piazza di Spagna (Square of Spain) of Rome.

Robert Burns is to serve as the central figure in an opera to be produced in England in the autumn. The music, in which Scottish traditional airs figure prominently, is to be by Frederic Austin.

Eighty Percent American Citizens, in four of our leading orchestras—the New York Philharmonic Orchestra, New York Symphony Orchestra, Philadelphia Orchestra and Cincinnati Orchestra—is the answer of their managers to an accusation before Congress that "more than ninety per cent are foreigners and only about seven per cent in the New York Symphony can speak English."

"Aïda," with Pietro Mascagni as Conductor, was given in a Vienna arena from July 25th to August 10th. The leading artists were from the La Scala Company, and were supported by a chorus of one thousand singers and an orchestra numbering one hundred and twenty. The production was on a lavish scale, creating an illusion of ancient Egypt, with horses and camels introduced to lend realism.

A Barrel Organ is still in use in the services of the parish church of Trottiscliffe (Kent), England. This is probably the last church of Great Britain to make a similar use of this instrument. It has a repertoire of sixty hymn tunes and the sexton officiates at the handle.

Deems Taylor is reported to be engaged on the writing of a musical score for a screen production of "Janice Meredith," for the Cosmopolitan Theater.

Camille Zeckwer, widely known as composer and teacher, died in Philadelphia on August 7th. A pupil of Dvořák and Philip Scharwenka, his compositions have appeared on programs of the Philadelphia Orchestra and Boston Symphony Orchestra. Perhaps his most notable achievement in this line was the winning in 1922 of the One-Thousand-Dollars Prize of the North Shore Festival Association, by his Symphonic Poem, "Jade Butterflies." Among others of his works are "A Swedish Fantasy," "Serenade Melancholique," and the "Symphonic Poem—Sohrab and Rustum."

An Assyrian Musical Tablet, dating from about 800 to 2,000 B. C., has been deciphered by Dr. Kurt Sachs of the Berlin High School of Music. It had long been lying in the Prussian State Museum and shows that the Assyrian scale consisted of five notes nearly approaching the sounds of the five black keys of the piano, and that the music was played on a harp of twenty-one strings.

Municipal Opera in St. Louis is among that city's most popular enterprises. One hundred thousand dollars in advance sales of tickets were in the office before the curtain rose on the first performance of the present season; and subscriptions to the 1925 series already amount to $35,000.

A Beethoven Festival was held in Bonn this summer, for the first time in several years. It was organized by the Beethoven-house Society; and the proceeds are to be used for the building of a Beethoven Museum where all of the master's works are to be exhibited either in manuscript or in photographs of manuscripts.

The National Association of Organists met at Atlantic City July 28th to August 1st. An unusually large attendance marked the meeting and especially of the more notable performers of the country. T. Tertius Noble, of New York, was elected President for the ensuing year and Cleveland, Ohio, was selected as the next place of meeting.

Mme. Emma Hayden Eames, mother of Emma Eames, the celebrated operatic soprano, is still, at the age of eighty-eight, a prominent teacher of singing, in Cleveland, Ohio.

Nineteen Native Composers will conduct their own works during the coming season of the Queen's Hall Promenade Concerts, by invitation of Sir Henry J. Wood. When will the conductor of one of our leading orchestras give similar encouragement to American composers?

Darius Milhaud has composed the music for "L'Inhumaine," the first film play to be produced in France with a specially written score.

The Premier Prix de Rome was won this year by Robert Dussant, a pupil of Widor.

Seventeen Thousand Persons heard Beethoven's "Ninth Symphony" when it was given at the Lewisohn Stadium of New York, July eighteenth, by the Philharmonic Orchestra assisted by the Oratorio Society of New York, under the baton of Willian Van Hoogstraten.

THE ETUDE

OCTOBER, 1924 Single Copies 25 Cents VOL. XLII, No. 10

"Piano Compulsory"

Many years ago, your editor made a tour of several thousand miles in Europe for the express purpose of visiting the great conservatories of music. In this way he had enviable opportunities for observing their methods and the resulting degrees of success.

The thing which impressed him most was the fact that in nearly all of the great conservatories the study of the piano was *compulsory*. No matter if the student was studying voice, violin, French horn or what not, his musical education was considered deficient if he did not also acquire a good working knowledge of the piano. The little line in the catalog "Piano Compulsory," meant a great deal to every teacher who saw it.

The wisdom of this is apparent to any instrumentalist who after having made a beginning with one instrument takes up the piano. In addition to opening up the world of harmony and counterpoint, it compels the player to juggle with from two to ten different voices or parts where he has hitherto only concerned himself with one thin line of melody. The intellectual training resulting from this is incomparable. Many of the greatest singers and performers are also excellent pianists. Kreisler, Galli-Curci, Sembrich, Melba, are only a few outstanding examples. No matter what other instrument you may study, if you miss the piano you miss the most consequential step in musical education.

This is particularly true of the thousands of fine boys and girls in our schools studying other instruments. They will never get the best from the violin, the trombone or the saxophone until they back their work up with a good solid training in piano playing.

It was Mauritz Hauptmann, the famous theorist, who said:

"The Pianoforte is the Modern Foundation in all Musical Training."

A Scrap of Paper

"Is there any law to prevent my giving a musical diploma or certificate?" Scores have asked this question.

It all depends upon the kind of a diploma or certificate. You give away all sorts of things, but never forget that a diploma is merely a piece of paper, no more valuable than any other piece of similar paper. The value is not in the printing or in your signature. The value is in what stands behind the diploma. There are thousands of colleges and conservatories issuing diplomas which do not begin to have the value of a simple little note from a real master, such as the following:

> To whom it may concern:
>
> "Miss ———— ———— has been my pupil for four years and has displayed remarkable ability, fine interpretative sense and great intelligence. I recommend her highly as a teacher.
>
> "Theodore Leschetizky."

The paper such a testimonial was written upon might be worth thousands of dollars to the teacher who had earned it.

A Dollar bill is printed on paper. So is a Mark. The difference in value of the two pieces of paper depends upon the world's estimate of the ability and the intention of the nation issuing the currency to stand back of its money.

By all means use diplomas. (There are excellent engraved blank music diplomas which may be purchased at slight cost.) But do not lead the pupil to believe that a diploma is anything more than your way of recognizing and stimulating the pupil's progress. The importance and value of the diploma depend entirely upon your reputation in the profession.

The Fashion of Being Business Like

The power of fashions, race, habits or *mores*, as Prof. Sumner, of Yale, called them, is committed irresistibly. All the sins of the decalogue have been by peoples at the behest of fashion. Lies, murders, thefts, arson, all known crimes have been done by poorly balanced people who have been willing to sacrifice everything to keep in some silly fashion. Fashion will lead both the male and the female human animal to resort to all kinds of bodily distortions, ridiculous clothing, war-paint from the skeleton stripes of the aborigine to the lip stick of the flapper. Only the very superior mind is able to hold aloof from extreme fashions and adopt rational, beautiful attire that does not excite attention.

The fashion of music, particularly with those musicians who like to call themselves artists, has changed entirely. The old-time fashion of dressing and acting in eccentric manner relegates the "artist" to the antique class. Mr. Edward Johnson (the Metropolitan Opera Company tenor), whose name in other days would probably have been Edoardo Figlio di Giovanni), recently remarked:—

"I think the successful artist of to-day has a great deal of business sense. The dreamer type is gone. He is out of style for one thing; a mis-fit in the keen, active age. One will often hear the comment, 'He doesn't look like a singer (or an actor, painter, whatever it is), does he?' Whatever may be accepted as the old-fashioned standard of how he should look, I am quite sure 'he,' whoever he is, is glad he doesn't look that way. Art is for all of us; and so are the more practical things of life. I believe in specialization, that is, on concentration upon a definite goal. But in attaining that goal each should not overlook the fact that he is, except perhaps for a special gift in one direction, pretty much like everybody else."

Are the Great German Conservatories Doomed?

The war has been over for six years. Germany is still in a tragic condition in so far as her arts and professions are concerned. A handful of active men and women have been working bravely to save what they can from the wreckage; but Germany is paying for the game of war in a way that can not be forgotten in generations. That they have been able to do so much under the terrible conditions during the last ten years is notable.

One of the leading pedagogs of Germany recently wrote to America describing conditions among the average music teachers in Germany thus:

"Conservatories which used to have from 600 to 800 pupils now have from 60 to 80. This is surely a sign of the breaking up of music. At the time of the discharge of the State employees by the Government, the competition became keen. Every one who was able to play the piano or the violin a little, gave lessons for very little money, so that the professionally trained musician could not exist. The impoverished Germany will have to bury its culture. The large orchestras are disappearing gradually. Private orchestras cannot exist any more. The musicians are returning from the health resorts because they can not exist on the money they receive. This is the real condition of the music teacher of Germany. It is a sad one, but it is true."

One might think that this was the voice of a solitary calamity howler. Listen, however, to a few quotations from a leading editorial in the *Berliner Tageblatt*, the leading publication of the German metropolis. The editorial is called "The Death of the Conservatories."

"In Berlin and in other large cities of the country numerous private music schools and conservatories have vanished during recent years. This is a fact that many circles have tried to conceal but the real truth remains and must be seen. Not merely the small and inconsequential schools have succumbed in the fight for existence, but many famous institutions long established and with large student attendance have been unable to keep up. During the past six months a celebrated German conservatory, with three hundred students before the war, was suddenly obliged to shut its doors."

The editorial continues with a correspondingly pessimistic outlook. Meanwhile America, which was the fruitful field, which for years sent large cargoes of students to Germany, has been building incomparable schools with faculties of international eminence which actually draw students from Europe.

Notwithstanding the fact that we rejoice in the triumphs of musical education in our own land, we can not view the musical situation in Germany with anything but dismay and sadness. Art is international. An artistic collapse in one country hurts all others. What good would it do the world if all of our leading American schools, which we have taken years to build, were to be suddenly demolished. The loss to Germany is a catastrophe in some ways greater than the devastation of cities. Music is Germany's pride and soul and it lies dying in the land of Beethoven, Brahms, Mozart, Schubert and Schumann. Some day, of course, it will rise again. Let us hope that day may be soon. There are many active and earnest workers in the music field in Germany, with eyes set upon the spiritual vision of the real greatness of the country, not the military Frankenstein which dragged it down. These men are now undergoing virtual starvation to keep together the remnants of musical life in Germany and trying to rebuild those vanished castles of musical greatness which were among the proudest possessions of the German people.

Concentrate on Something Worth While

"Ladies, we have with us for our Heliotrope Luncheon, our distinguished fellowtownsman, the Hon. Hascom Binns, whom we all have learned to call 'our own Has' Binns.' Mr. Binns has come to us out of his busy life to say just a few words on music. It gives me great pleasure to introduce Mr. Binns."

The eminent Binns arises, wipes his firm jaw with a napkin, exercises his larynx with a few coughs, smiles genially at the jewel incrusted wife of his most lucrative client and begins:

"Ladies of the Calliope Club: It gives me great pleasure to be with you at this delightful luncheon of the most delightful group of ladies in our State, if not in the United States (Applause). I have, as your accomplished President, or should I say Presidentess (giggles from the President), has just said, come from a busy life with many important problems (more calisthenics with his larynx). I must confess that I know very little about music. Your honored President has just asked me what instrument I play. I told her that I once played on the linoleum when I was a child (Great laughter). I haven't very much to say; and I can say it quickly. I think music is a wonderful thing (etc., etc., until his ignorance of the subject is more completely exposed). And now, ladies, I must close by thanking you one and all for giving me one of the most delightful hours in my experience, an hour that I shall find a constant source of inspiration during my coming campaign for Congress where I shall hope to serve those principles which are very obviously so dear to all of you." (Great applause).

The President rises, overcome with the distinction of having had so eminent a guest. She says, modestly:

"Ladies of the Calliope Club: It is indeed an honor to have learned so much about music, from so very great a man whom we shall hope to have as our next Congressman. (Applause, during which one trans-Balkan waiter exorcises a trans-Aegean waiter for permitting a chicken patty to fall down the back of the little music teacher obscurely seated in a far corner. Such a waste of good chicken!) Ladies, we all now realize what our club means to us. We have decided to raise our dues five dollars for the coming year."

Does this sound familiar to some of you? A great many so-called music clubs are nothing more than "gobble clubs," and "adulation" clubs. The musician plays a minor role to the Chef and the Modiste. The music club movement fostered by the American Federation of Music Clubs, has been of immense value to our country; but it is a dismal spectacle to see many clubs drifting away from the real purposes of a music club to become a kind of glorified *Kaffeklatsch.*

The study of music, the promotion of music, the higher enjoyment of music should be the work upon which the music club members should concentrate. All over the country thousands of Etude clubs and Music History Clubs of young people have been formed and have been of incalculable value in the musical development of the land. They concentrate on something worth while. We believe enthusiastically in the delightful social side of the music club; but the main aim must be Music, Music, Music. When a club minimizes music and devotes itself to other things, it ceases to deserve recognition as a music club.

Character in Music

Does the composer's real character show in his music? We have always felt that it did in very patent fashion. Dr. Percy C. Buck, late Professor of Music at the University of Dublin, has confirmed our attitude in the following nicely phrased paragraph which should be read more than once by teachers and by students.

"Character is a moral question, and art is fundamentally dependent upon character. The work of an artist is a projection of personality, in spite of the fact that the phrase has been discredited, owing to the insistence on it by those who pretend that art is nothing else. His work must change if his character changes; so that character must be a function of his work. And from the non-creator's standpoint character is involved no less, for what we appreciate depends upon our own character. You will remember the saying of Ruskin, 'Tell me what you like and I will tell you what you are.'"

The Secretary of Music

For years there has been a turbulent clamor for a Secretary of Education in the Presidential Cabinet. Education has become such an immense undertaking that the call for governmental regulation of some phases of the problem seems reasonable. On the other hand the question arises as to whether it is wise to cast the brain building of our children into the hugger-mugger of politics. What would the Secretary of Education do? Where would his powers end? How would he help? All significant inquiries. Having a Secretary of Education, might we not also have a Secretary of Music. Richard Strauss has just been appointed General Music Director of Austria. If we could be sure of having a man correspondingly great in our Cabinet, might it not be salutary to the interests of the art?

Community Opera

Who said that opera is un-American? All over the country small operatic companies are springing up, largely as a species of safety valves for the hundreds of students who have studied opera enthusiastically only to find that there have hitherto been only a very few large conduit pipes for their talents. If they were squeezed out of the metropolitan channels, they were squeezed out of a career.

Much of our taste for opera is artificial, alien in the extreme. We have swallowed opera with its preposterous fiddle-faddle plots, partly because it was fashion, partly because of the lure of the imperishable tunes of Bellini, Verdi and Donizetti. Wagner gave us drama, but drama in Teutonic doses. The new Italian realismo comes nearer to our conception of opera and thus we may account for the great success of "Madam Butterfly" and "Pagliacci." But many silly operatic conventionalities will have to be abraded before we come to opera such as Americans will genuinely adore.

Recollections of Master Musicians and Master Pianists Whom I Have Known

By the Distinguished Piano Virtuoso

MARK HAMBOURG

"The Etude" takes pride in presenting herewith the first of a series of noteworthy articles by Mr. Hambourg, whose similar series several years ago proved of very great practical help to our readers. Mr. Hambourg was born at Bogutchar, South Russia, May 30, 1879. He studied the pianoforte with his father, and with Leschetizky. He appeared at first with great success as a prodigy. His tours of all countries have been sensational in their success. His repertoire is enormous. He is reputed to have continually at his finger tips no less than 40 concertos and over 800 other compositions. He has given over 1500 recitals and concerts. He is frequently compared with Rubinstein because of his feats of memory and technic. Mr. Hambourg is a naturalized British subject and resides in London. In 1907 he married the daughter of Sir Kenneth Muir Mackenzie. Mr. Hambourg is one of the most practical and understandable writers upon pianoforte playing, treating his problems in big, human fashion and never going over the heads of the majority of our readers. Students and teachers may look forward with pleasure to coming issues containing these articles. Mr. Hambourg's next article will be "Why is so Much Piano Playing Dull and Uninteresting to Listen to?"

EVER since the age of five, when I began my career as a pianist, I have met and admired Master Musicians and Pianists of every nationality and every school.

The first one I can remember at all vividly was Safonoff, who was one of the principal musicians in Moscow, when I was brought there as a boy of seven, by my father. I recollect that I played a piece of Hummel's to Safonoff, which had a great many jumps and thrown notes in it, and he said to my father, when I had finished: "Here is a child with a remarkable 'treff talent;'" meaning that I had a good eye for catching the right notes from a distance.

At that same period there was an artist there, forgotten now but well known in those days, called Schosstakosky, who was director of the Moscow Conservatory of Music. All that I can tell of him is what he was by way of giving me pianoforte lessons; but that he was never ready for me, and I was never ready for him, so that between us it was a sort of farce, and what I learned from him was purely nominal! My real teacher during all that time was my father, Professor Michael Hambourg, with whom I learned the whole of the Forty-eight Preludes and Fugues of Bach, and ruined my eyesight, but improved my technic and knowledge of music. For there is no grounding, in my opinion, to be compared to the works of Bach, for the young pianist.

A Master Mentor

Later on, when I was nearly nine years old, my father took me to England, where the first pianist I heard and saw was Paderewski, then at the height of his successes in London. His great flexibility of technic, and his dramatic power appealed to my imagination; and he was my example and hero, as a small boy. He also became a great friend of my father who admired him very much, and Paderewski helped me with advice, and with both moral and financial support. For when Felix Moscheles, the painter, and my best friend, started getting a sum of money subscribed to enable me to go to Vienna to study with Paderewski's master, Theodore Leschetizky, Paderewski himself contributed a large amount to the fund collected in my behalf. I can, therefore, never forget what I owed to his generous interest and early friendship. Leschetizky told me afterwards that the first time he saw Paderewski, he realized that he was destined to become a remarkable man, outstanding in the dramatic force of his playing, and in the romance of his personality. Even in those days, in Vienna there already existed legends about the enormous numbers of hours per day (some people declared as much as fifteen), that Paderewski spent in practicing. Whether it was true or not I never had an opportunity of verifying.

Joachim's Poison

To return to the years that I lived in London, from the age of nine till twelve, I there met Siloti, Pachmann and Sapellnikoff, who were already mature artists. I was very keen on bicycling, and one day I nearly ran over the veteran, Alfredo Piatti, well-known as the greatest 'cellist of the day, but already very advanced in years. He lived quite close to where I did in London, and when he saw who it was who had so nearly terminated his existence, he said, gravely: "Boy, boy, learn to ride your bicycle more slowly, and to play your scales more rapidly." At that time I was engaged by the firm of Chappell to play at one of the Monday "Pops," with old Piatti and Joachim. It must have been a funny sight to see us playing together! I was ten, and they were both well over seventy. Joachim was then very gouty and, as it affected his fingers, he often had great difficulty in his performances. He was very fond of port and champagne, both of which were very bad for him in his state. But when his friends said to him, "Master, how can you go on drinking these, for you, poisonous drinks?" he would answer, "What will you? I am used to it, and I cannot start something new, now."

© F. A. Swain, London

MARK HAMBOURG

It was through Felix Moscheles that I was introduced to Hans Richter, who was a wonderful friend to me all through my student years in Vienna. He used to take me with him to his rehearsals and performances, and would insist on my sitting hidden in the orchestra all through the Wagner and other operas at the Vienna Opera House, where he conducted. For he said that to be a thorough musician, the student must know the orchestra through and through and be aware of each instrument and its peculiar powers and sonorities. What I learned under Richter's auspices in this way has proved invaluable to me in after life. I once nearly lost my Paradise, however, as, being very young (only twelve) and very tired, I was discovered fast asleep in the second act of "Tristan and Isolde," for which Richter was furious and declared that if he ever caught me asleep again, he would never allow me to set foot in his orchestra. Later, when I was fourteen-and-a-half, I made my first appearance as a full-grown pianist (no longer an odious prodigy!) under Hans Richter's baton, with the Philharmonic Orchestra, in Vienna. Before the concert, Richter asked me to play over all the passages of the concerto (it was Chopin in E minor) to him; for he said that when pianists played concerti with his orchestra he always felt it was like washing linen in a quick flowing brook, everything got rushed away before he could get the hang of it. He desired to hear exactly what I had to play so as to realize how to keep us all together.

Edouard Schütt, the composer, was a great friend of mine during these early years and wrote several pieces for me. He had a great reputation in Vienna as a highly refined piano player and composer; and his style was an object lesson in distinction and elegance. I met also Johann Strauss, the elder (I mean the man who wrote the famous waltzes), a jolly old fellow, full of the zest and peculiar Viennese gaiety which he so well imparted to his music. I remember playing to him Schütt's paraphrase of his well-known "Kuss Waltz," out of his operetta, "The Gipsy Baron," and Johann Strauss was delighted with it; which shows that there are composers who enjoy transcriptions of their own works, in spite of all paraphrases being so despised by present day musical critics!

Brahms' Apology

Johannes Brahms, of course, was one of the most interesting figures of Viennese musical life at that time, and one of my greatest treasures is a small cigar cutter which he gave me as a present when I first started smoking—that alluring soother of nerves—which I am afraid I did very early in my career. Brahms was present at a festival of his works conducted by Felix Weingartner, where I played when still no more than fifteen. After the concert there was a banquet given for Brahms, where the organizers proposed his health, and then he got up and proposed the health of the "Youth"—that was I! I thought it was most kind of him, and was immensely gratified. I remember also, before one of the Sunday concerts in Vienna, that at the rehearsal with Richter, a lady pianist was playing the Brahms *Concerto in B flat major*, and the composer was present. He got dissatisfied with the lady's performance and at last lost his temper, and cried out: "Why, in God's name, do horrible women play my music!" He then rushed out of the hall. The next day he was extremely sorry and wrote the most charming letter of apology to the lady, accompanied by a large bouquet of flowers, a touching gesture for so great and rugged a man. Bruckner, the composer, was often with Brahms, at Richter's rehearsal, where Brahms used to sit with his hands crossed under his chin, leaning over the sill of a box, and resting upon his elbows, his eyes staring into space—a characteristic attitude which we, who reverenced and admired him almost as a god, used to watch for and love.

Of course it was from that great teacher, Leschetizky, that I learned most everything, not only appertaining to piano playing, but in regard to every aspect of how to live. He was a mentor of every possible kind, and a real father to all his pupils in whom he was really interested. As for a pianoforte lesson with him, it was a life experience, if one was capable of understanding what he wanted; and he had a wonderful way of explaining every detail with the utmost precision and care. He was not only marvellous at developing facility and brilliance of execution in his pupils, but also focused his teaching enormously upon the quality of sound produced. Everything had to be beautiful and polished, with him, and alive with the right kind of expression and feeling. He never allowed anything to pass his judgment that was dull, monotonous, or harsh in tone production. He used to urge us to go and listen to the great singers, to see how they phrased and brought out melody and cantilena passages, and to take them as our models in this branch of our studies.

I remember Leschetizky being present at a concert where I was playing, and where the "Symphonie Pathétique," of Tchaikowsky, was being performed for the first time in Vienna. Leschetizky sat together with the well-known musical critic, Hanslick, who was as old a man as himself, and whose ear was not yet attuned to the chromatic counterpoint of modern orchestral music. Both the old men hated the symphony and said of the end, where the composition dies away: "So begräbt sich dass Werk." (Now the work has buried itself!) Their prognostication turned out to be false, as the symphony lived to be extremely popular and is still very much alive, though whether it or other of Tchaikowsky's works will achieve absolute posterity is still on the knees of the gods. However, Leschetizky's dislike of it just shows how even the most experienced musicians can be mistaken in their estimate of music, in the way of what will become acceptable and what will not. When I reflect upon the immense enjoyment thousands have obtained from the orchestral and other works of Tchaikowsky, especially the "Pathétique Symphony," without which at one time can remember it was almost impossible to complete an orchestral program, I often think of that dictum of Leschetizky about its early burial!

Whilst I was studying with Leschetizky, where I was very much trotted around as being still an "infant prodigy," who should arrive but Anton Rubinstein, King of Pianists, and Master mind of Music! I was brought to play to him, and after my performance he introduced me to Moritz Rosenthal who had just entered.

Rosenthal was at that time the most brilliant of the young pianists who had been fostered by Liszt and our friendship, begun then, has remained unimpaired ever since. Rubinstein was asked by Leschetizky to give a private recital at his house for the pupils.

Rubinstein's Power

The thing I remember best about that recital was that I was sitting so near to Rubinstein, close up to the keyboard, that I was in perfect agony every time he lifted his hands, which he used to do so tremendously. For I said to myself: "If he misses his note, and hits me, I am a dead man!" But when he did miss, he did not hit me; but he did turn round to us and say: "That, young men, is how not to do it!" And his wonderful purity of sound—how it impressed me! I have never heard anything to equal it, so little effect of pedal, everything transparently clear. Yet he did take a great deal of pedal; but, like all the best masters of pedal playing, he made it sound as if he scarcely took any. It was just natural and perfect tone production. Luckily for me, he took a fancy to me and considered me as a kind of mascot when he was playing his favorite card games. So I used to sit beside him on a stool, while he and Leschetizky went on playing cards far into the night. By nature Rubinstein seemed to be an awkward and silent man, compared with Leschetizky, who was so much the charming, elegant Pole. But Rubinstein had a force of personality which held one fascinated as to a magnet, and even I, a little boy, felt compelled by it. When he left Vienna all the Leschetizky piano students came and gave him a big send-off at the station, with a dinner beforehand.

Since my recollections of Rubinstein, I have met no great master of music from whom I learnt more as a young man than from Eugene Ysaye, the great Belgian violinist. I had occasion to be thrown a good deal with him at one time during my early manhood, and was inspired by his beauty of phrasing and his broad and noble conception of interpretation, to a degree which had a very great effect upon me. Busoni, the great pianist, is also an artist whose renderings have profoundly interested me, especially in his ideas about the works of Liszt.

Many Influences

To sum up the impressions and what I have admired in all the artist pianists I have mentioned: I was inspired through Anton Rubinstein, by his majesty, purity of sound, and overwhelming personality; through Pachmann, by his polish and elegance; through Leschetizky, by his immense knowledge and understanding of the piano as an instrument; through Paderewski, by his dramatic force, and charm; through Sapellnikoff, by his brilliance; through Busoni, by his Byronesque mentality and his massive effects; through Moritz Rosenthal, by his demoniacal facility. Through all of them, by astonishment at the variety and manifold capabilities of my wonderful instrument, the modern pianoforte, which has brought into existence so much talent and so many fine artists to give pleasure and "uplift" to the world.

"We do not find the students interested in music are likely to have a lower academic rating. Indeed, the men's glee club, which tied Columbia for second place in the national contest in New York, is unusually good. Out of the fifty-two men, only two were ineligible at the end of the first semester."

—PRES. CHARLES W. FLINT, *of Syracuse University.*

"A good musical critic is a man who has a considerable literary gift, and at the same time has from childhood been brought up in a musical atmosphere."
—BERNARD SHAW.

* * *

"The brain and mind are one thing and technic is another. You may cultivate the fingers, the throat, or whatever else is used; but without brain and heart there is no musical education."—GEORGE W. CHADWICK.

* * *

"America has produced an architecture, not by trying to invent a national style, but by building the sort of houses that the conditions of life demanded. It may produce a music of its own when the conditions of its musical life are sufficiently strong to make demands of its artists."—H. C. COLLES.

* * *

"Music is not a static thing. It is in a state of constant evolution and development. That is a matter of history. Musical idiom is constantly changing. It is desirable that it should. So it becomes incumbent upon the teacher and student to know some of the developments taking place in the present age, and, not the least, in this country."—ASHLEY PETTIS.

* * *

"The supreme function of the creative artist is to seek new forms of expression and to place them in new and beautiful settings; it is the quality that marks all progress in art and differentiates the seer from the imitator. . . . A new technic should be invented which will combine a knowledge of tradition and the modern experiment, if for no other reason than to avoid the pitfall of imitation."—LOUIS GRUENBERG.

What a Music Lesson Should Contain

By Earl S. Hilton

Recitation

THE pupil should play the material of the last lesson. First, the Studies, then the Pieces.

Dictation and Correction

Three trials (or recitations) should be allowed. In the first trial, the teacher has the pupil play the work through—mistakes and all—without himself interfering. This gives the teacher a clear understanding how the pupil has been practicing. It also shows what the pupil has remembered since the last lesson. The second trial may be broken with interruptions by the teacher's dictations and corrections. In the third trial, the pupil is supposed to play the work as nearly like these corrections as possible.

Grading

In the three trials the pupil has been given an opportunity to play correctly. If he has done so, a grade of 100 per cent. is marked upon the work, or, if nearly correct, 90 per cent., which permits the pupil to pass up the work and take new. If more than three trials are given the pupil to let him have an opportunity to get the work better, then, *one* point is taken off the highest grade for each trial more than three.

Assignation, review work or new studies and pieces.

After all the percentage grades are marked, then the material for next lesson should be assigned. The amount to be assigned is judged according to the manner the pupil recited the last lesson.

Brief explanation of new and review work.

New work must be carefully explained and the teacher should question the pupil about the new as well as the review materials which are to be studied during the following week.

"What is important is that the music be played in the right way, with the proper spirit, style, life, emotion and enthusiasm, whether it is with the notes or without."
—ERNEST BLOCH.

Some Effects of Music

By Russell Snively Gilbert

THE two fundamental chords in music are the Tonic and the Dominant. Their effects upon the hearer are directly opposite and thus a proportion is kept.

The Tonic, or first chord of the scale, gives a feeling of complete rest and finish. Children usually describe it as the home chord, because it is like reaching home after school. They feel that it is a sort of safety rock, firm but comfortable, where they can pause to catch their breath. All the old masters finished their compositions with the Tonic chord. Musically uneducated people find no trouble in recognizing it. Repeated softly, it gives a very soothing and relaxed feeling; repeated loudly, it gives a broad and pompous sound that arouses the imagination and creates life as in the opening bars of most marches which make one impatient to start.

The Dominant chord on the fifth of the scale requires movement. It expresses action and demands movement to a following chord. This desire is like the law of gravity; it cannot be avoided. The following little story will illustrate the idea. Once a friend went to call upon Mendelssohn. The great composer was dressing in the room above the one in which his visitor was waiting. Hearing how slowly the master moved, his friend became impatient. Going to the piano he struck a Dominant Seventh Chord in the most enticing manner, and left it without resolving it into the following chord. A moment later Mendelssohn rushed half-dressed down the stairs and flew to the piano where he played the needed Tonic chord. He had heard the Dominant chord and its impulse to move to the Tonic was so strong that he had to hear the Tonic after it.

The first prelude in C major by Chopin is a favorite of everyone. Much of it is composed of Dominant and Tonic chords. Some times there are two Dominants before a Tonic is reached. Thus such a desire to move on is created that to many people it says, "Onward! Onward!"

Successions of Dominant and Tonic chords played very softly and rhythmically give a soothing and sleepy feeling, as in the *Magic Fire Music,* from "Walküre," and Schumann's *A Child Falling Asleep.*

The old masters built their music on the simpler chords. It is recorded that the wounded soldiers in the hospitals preferred Beethoven. Possibly the Dominant chords gave them the moving desire to fight for their lives, while the Tonic chords may have made them feel more solid mentally.

Everyone likes major keys. Some love and others hate minor keys. Some children ask for pieces in minor keys and others cannot endure to practice them. People in bodily distress are depressed by the minor; while those in mental trouble are inspired by it. Foreigners often satisfy their homesickness by singing in the minor key. The songs of the colored slaves are filled with minor harmonies. It can be mysterious and spooky and cause all sorts of false things to rise in the imagination.

Rapid two-quarter time usually creates life; that is, movement, both physical and mental. The desire to dance is aroused by it, with a feeling of freedom and joy. All bounds of restraint are loosed by it, and children will go the speed limit in playing it.

Three-quarter time, as in the waltz, gives the same feeling, but with restraint added. In the former days people waltzed rather quietly in this time; while they abandoned themselves to the rollicking rhythm of the old two-step in two-quarter time.

Four-quarter time is also definite and controlled as in marches. Played slowly, as in funeral marches, it is both impressive and depressing. Played with spirit it is most inspiring and gives a solid feeling to the hearer.

Six-eight time gives a very flowing and smooth effect. Very beautiful and sustained melodies often flow along in this time. It can give calmness and peace as in Barcarolles, or joy and dancing as in the Tartantelles.

It is no copy-book maxim, but sober truth, to say that to have appreciation of, and understanding for, art is to to have one of the most genuine and remunerative forms of wealth which it is given to mortal man to possess. I measure my words when I say that not the most profitable transaction of my business career has brought me results comparable in value to those which I derived from the investment of hearing, in my early youth, let us say, "Tristan and Isolde," or seeing Botticelli's "Primavera." Moreover, the dividends which we receive from the appreciation of beauty and the cultivation of art are wholly "tax-exempt." No surtaxes can diminish them, no Bolshevik can take them away from us.

OTTO H. KAHN.

Pranks on Parnassus

How Great Composers Have Seen the Humorous and Joyous Side of Life

By the Noted Critic and Author

HENRY T. FINCK

Among the most interesting concerts given in this country are those of the Beethoven Association in New York. To this association belong all the great singers and players of the time! There are no membership dues, but it is expected of the members that they will be willing, once every few years, to appear without any remuneration whatever, at one concert together with half-a-dozen other artists of the same high rank.

There are no other musical entertainments at which one can see and hear so many celebrities at once, excepting an occasional all-star performance at the Metropolitan Opera House; hence these concerts always draw large audiences. The proceeds are devoted to promoting the cause of music in various ways. For example, the receipts of one season were used to defray the expenses of bringing out, in three volumes, Thayer's standard Life of Beethoven in the original English, with additions by Krehbiel and others.

"The Carnival of Animals"

Usually, it is needless to say, the concerts of the Beethoven Association are dignified as dignified can be; but on one occasion the musicians "came off the perch" by playing the amusing "Carnival of Animals" by Saint-Saëns. In this piece the eminent Frenchman plays all sorts of tonal pranks—some of them almost jazzy—and the performers also indulged in pranks of their own. Harold Bauer, President of the Association, apologized sarcastically for not being able to offer the audience better pianists than Walter Damrosch and Arthur Bodanzky; whereupon Mr. Damrosch jumped up and, with mock-indignation, declared that while he and his companion might have modest doubts now and then as to their being great conductors, they *knew* they were great pianists.

The audience was tremendously delighted by all these pranks on Parnassus; and I could not help thinking that if humorous episodes like these were frequent at concerts, men, in particular, would be more apt to attend.

Does not Shakespeare introduce humorous episodes even in his most harrowing tragedies?

It is well known that when musicians get together at their clubs they are more prone to indulge in tonal pranks than in serious playing or singing. They feel the need of relaxation, of something to rest and refresh the jaded mind.

Jazz consists largely of tonal pranks, and to jazz our musicians are turning for amusement more and more, those who dwell on the highest peaks of the Parnassus mountain chain as well as those who occupy the foothills.

Richard Wagner in Gay Mood

Among the dwellers on the summit of the musical Parnassus none is more conspicuous for his indulgence in pranks than Richard Wagner. In his case it isn't so much musical capers (although *Beckmesser's* serenade in *"Die Meistersinger"* and *Hans Sach's* interruptions of it by hammering on the shoes he is mending is a classical case of tonal fun) as personal exhibitions of animal spirits.

Ferdinand Praeger relates that one day in Triebschen (Switzerland), when he was with Wagner discussing various things, the great man suddenly rose and stood on his head on the sofa. At the moment when his feet were in the air the door opened and Madame Wagner entered. She hastened forward, exclaiming "Ach, lieber Richard! Richard!". Getting back on his feet he reassured her of his sanity, explaining that he was only showing Ferdinand that he could stand on his head at sixty, which was more than the said Ferdinand could do.

When Wagner was only seven years old his uncle Albert complained that the untamable boy left the seat of a pair of trousers hanging on a fence 'most every day. Throughout his life sight of a tree aroused his inherited monkey instincts.

Judith Gautier, after visiting him in Switzerland wrote: "One of the most remarkable things about Wagner is the youthful gaiety which so frequently breaks out, and the charming good humor which his tormented life has never been able to quench. . .At Lucerne he surprised me by his skill in bodily exercise and by his singular agility. He climbed the highest trees in his garden to the terror of his wife, who besought me not to look at him, because, she said, if he were encouraged he would commit no end of follies."

Hans von Wolzogen relates that one day, at the Villa Wahnfried in Bayreuth, when Liszt had been playing as he alone could play, and every one present was deeply moved, Wagner suddenly got on his knees and hands, crawled up to the great pianist and exclaimed: "Franz, to you people should come only on all fours!"

His droll wit often was exhibited at rehearsals. Once when "Rienzi" was being prepared, the trombones played so loudly that he stopped them and said, with a smile: "Gentlemen, if I mistake not, we are in Dresden, and not marching around Jericho, where your ancestors, strong of lung, blew down the city walls."

At a rehearsal of "Götterdämmerung," when the *Hagen* thrust his spear into *Siegfried* very awkwardly, Wagner snatched it from him and shouted: "Fellow, have you never yet stabbed a man from behind?"

Elsewhere I have related how, even in the darkest hour of his life, when he fled to Stuttgart in fear of his pursuing creditors, his sense of humor was not subdued. On the evening before he intended to leave the city in order to hide in the mountains, he went once more to his barber and, after he been shaved, remarked: "Yes, my friend, it's no use, I must go; you are altogether too exorbitant." The poor man took this seriously and begged him not to go on that account, as he was willing to shave him for less.

Frau Wille, who relates this anecdote, and who had frequent opportunity to note the humorous, sarcastic and playful moods of her guest, quotes the apt remark of an English writer that "there is nothing so pleasant as the nonsense of men of genius; but no fool should be present."

Beethoven Unlike His Music

The discrepancy between Beethoven and his music was extraordinary. About the time when he was composing the Ninth Symphony and his great mass (Missa Solemnis), two of his most scholarly, dignified and impressive works, he was arrested one day as a tramp in the outskirts of Vienna. He had left his house without his hat and wearing a very shabby coat. He was observed peering into windows and behaving strangely in other ways. A crowd gathered and a policeman was summoned. The supposed tramp kept on shouting "I am Beethoven! I am Beethoven!" but nobody believed him. Finally someone came along who knew him and he was sent home with apologies.

Was it the touch of insanity which is supposed to be associated with genius ("great wit to madness nearly is allied") or a crude sense of fun that made the great composer do such "stunts?" Who can tell? He certainly was wont to deal in pranks. Summing up the details given by contemporaries, Grove says: "To tell the truth he was fond of horse-play, and that not always in good taste. The stories—some of them told by himself—of his throwing books, plates, eggs, at the servants; of his pouring the dish of stew over the head of the waiter who had served him wrongly; of the wisp of goat's beard sent to the lady who asked him for a lock of his hair—all are instances of it. No one had a sharper eye or ear for a joke when it was told on another . . . But it must be confessed that his ear and his enjoyment were less keen when the joke was against himself."

His letters, like those of Wagner, are full of droll things. "Swift or Shakespeare himself never made worse puns with more pleasure, or devised queerer spelling or more miserable rhymes, or bestowed more nicknames on his friends. He lived in a world of nicknames and jokes."

Beethoven knew that genius ranks higher than "noble" birth or money and he never lost a chance to show that he considered himself as good as anybody, be he emperor or millionaire. "I, too, am a king," he used to say.

Among the most familiar anecdotes is one relating to his brother who one day left his card "Johann van Beethoven, Gutsbesitzer" (land proprietor). The composer returned it after writing on the back "L. van Beethoven, Hirnbesitzer" (brain proprietor).

Schubert Was a Merry Young Soul

Although Schubert, throughout his short life, always felt the pinch of poverty, he was as jolly a fellow as you could find in a week's search. Many were the boon companions attracted to him by his joviality and love of pranks. They had frequent gatherings which were called "Schubertiads," and these fellows did not hesitate to help him spend in food and wine what little he was able to earn.

Nothing gave him more pleasure than a chance to sit at the piano and improvise waltzes by the hour for gay dancers. One evening, when the jollification was interrupted because of Lent, he exclaimed petulantly: "They do this just to annoy me!"

Schubert often played and even wrote down things he soon forgot completely. No doubt, when thus improvising dances by the hour, he often played melodies as enchanting as any of those that have come down to us. Readers of The Etude who do not know these dances should order them at once, either in their simple original form or in the more difficult versions made by Liszt.

As for those "Schubertiads," one can imagine what gay musical pranks were played by these tonal vagabonds at every one of them. One evening Schubert took a comb, wrapped it in thin tissue paper and hummed through it his *Erlking,* with grotesque exaggeration of expression marks, turning a tragedy into farce. It must have been excruciatingly funny—a sort of forerunner of jazz.

Mozart and Liszt

Mozart, like Schubert, was generally happy in spite of his poverty. His sunny disposition is reflected in his music, which is as cloudless as the California sky. He was so poor that sometimes he could not afford to buy wood for a fire in cold weather except a stick or two which he and his wife carried up and down stairs to keep their blood in circulation.

Concerning his doings when in particularly good humor I can recall at this moment only one incident pertinent to my subject. He is said to have made a bet that he could push down five C's at once on the keyboard of the piano of his time. He won it by striking the middle C with his prominent nose.

That nose must have been more or less of a trial to him, although it wasn't a Cyrano de Bergerac nose—or like that of the American millionaire who, arriving for dinner at a place where the doorman did not know him, was told: "You'll have to take off that nose, Sir; this isn't a fancy dress affair."

When Mozart was censured for his alleged "mannerisms" he used to say "I cannot help those any more than I can help the shape of my nose."

Liszt loved dearly to indulge in pranks of all sorts. One day, when he had been persuaded to travel from Weimar, in company with some other notable persons, to another town where great preparations had been made for their reception, the committee was dumfounded when the honorable guests, obedient to Liszt's whim, stepped out of a fourth class railway car—the kind used for cattle!

As everybody knows, Liszt was the kindest man that ever lived. He taught hundreds of young women and men, but never accepted a cent in payment, even when he was by no means rich, for he ceased playing in public thirty-nine years before he died. Altruism—helping others—was his ideal always.

He even subjected himself to the irksome task of reading and commenting on manuscripts sent to him by ambitious young composers. Once in a while he had his reward, as when he played over the Greig piano concerto and promptly proclaimed that Norwegian a genius. At other times he didn't have such good luck.

One day a conceited-looking young man came to him with a manuscript. Now Liszt himself was a "bold bad man" so far as dissonances are concerned, but he knew the limit. Glancing at the manuscript he shook his head and said, pointing to a certain line: "Young man, this cannot be done."

"But it can be done, for I have done it!" the young fellow exclaimed impudently.

Liszt walked to his desk, took the quill out of his inkstand and flipped the ink on his visitor's white vest, saying:

"This, too, you see, *can* be done, but it mustn't."

Afterwards he gave the youth a new vest. If he lived now he would have to buy whole carloads of vests for the cacophonists whom he would condemn and bespatter with ink.

Let me tell you one more Liszt anecdote. Like all great geniuses who were ahead of their time he suffered much at the hands of conservative critics. He was fond of playing whist. One evening he suggested a game. One of those present said he was very sorry he could not join them as he didn't know anything at all about the game.

"Very well," said Liszt, "then you can be our critic."

The Witty Brahms

There are still music lovers who do not care for the compositions of Brahms, but no one with a sense of humor could fail to appreciate his wit and laugh at his pranks.

In the matter of reading and judging manuscripts he was not so altruistic as Liszt. One afternoon he left his house and walked up the street. He was presently accosted by a young man who had a roll under his arm. "Excuse me—can you tell me where Herr Brahms lives?" "In that house over there, third story" answered Brahms and hurried on.

On another occasion he consented, after much coaxing, to play the piano to accompany an amateur violincellist who was anything but a Piatti or a Casals. After a few bars Brahms began to play fortissimo and kept it up to the end of the piece.

"How loudly you play—I could not hear my own playing," the amateur exclaimed.

"Lucky man," answered Brahms.

In some ways Brahms was as eccentric as Beethoven. Being very temperamental, Beethoven often flared up and said disagreeable, nay positively insulting things to his best friends. As soon as he cooled down he bitterly regretted this and wrote letters contritely apologetic.

Brahms was less apologetic but he excelled—thanks largely to his biting wit—in the art of rubbing everybody's fur the wrong way. It is related that at an evening party, when he was going home, he turned round at the door and said: "If there is anyone here whom I have forgotten to insult, I beg his pardon."

In this instance his wit came to the rescue of his manners. It reminds one just a little of the naval officer who, returning from a cruise among the islands of cannibals, was asked about their manners and customs. His brief answer was: "Customs beastly; manners, none."

Yet Brahms was one of the kindest of men. He was particularly fond of children and always ready to devote himself to their amusement.

When He Got the Worst of It

It may be said that there is as singular a discrepancy between the music of Brahms and his personality as in the case of Beethoven. While Brahms bubbled over with wit in conversation, his music is always serious. His friend, the poet Mosenthal, once complained about this excessive seriousness with which he took his art. On Brahms' declaring that he was sometimes in a joyful mood, Mosenthal retorted: "I agree with you. When you are in a right merry mood then you sing 'The Grave is My Delight'."

Another time the witty Brahms was outwitted was when he called on his friend Leschetizky and found him composing. He liked this famous teacher personally but didn't care for his pieces. Looking over the teacher's shoulder he said: "Ha! What kind of things are you writing this morning? I see—quite little things, little things of course, yes." "*Little* things?" replied Leschetizky. "Yes, they are that, but ten times more amusing than yours, I can tell you."

Still another time when Brahms got the worst of it was when he and the pianist Epstein were going home late, amid rain and snow, and came across a well-dressed man lying in the street apparently very ill. He was able to tell where he lived, in an adjacent street, so the two men carried him to the house and started for the fourth floor; but before they reached it, a woman with the mien and voice of a fury appeared above them and shouted: "Aha! So you are the fine fellows who seduce my husband to drink and carouse with them through half the night! Are you not ashamed of yourselves? Wait, I'll show you!"

With that she hurled her broom and another volley of abuse at the two musicians, who took to flight precipitately.

Self-Test Questions on Mr. Finck's Article

1. *Who wrote the Carnival of Animals?*
2. *Which composer set a cobbler's tapping to music?*
3. *Which great composer was given to horse play?*
4. *How did Mozart win a famous bet?*
5. *Which great composer went out of his way to amuse children?*

Finding the Right Fingers at the Right Time

By T. L. Rickaby

FINGERING seems to present a very considerable obstacle to the progress of the average pupil. Yet fingering must be correct, convenient and, above all, so firmly established as to be practically automatic.

In deciding on the best fingering, the character of the passage to be played, the size and shape of the hand and fingers must all be considered. The conventional fingering of the scales and arpeggios is more or less fixed, but outside of music for the earlier grades and the general run of salon pieces, scales and arpeggios are seldom found in their fundamental or primary forms. Furthermore, rules for fingering are like rules in grammar or counterpoint. By the time one has mastered all the exceptions the rules have been forgotten or have lost their power. For example, in playing scales in flats a rule is given thus:

"In the right hand place the fourth finger on *B flat*." Yet innumerable instances could be cited in which the fourth finger must carefully avoid *B flat*.

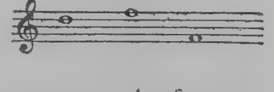
Another rule often given is: "Use the fourth finger but once in each octave." This holds good in straight scale playing, but in many compositions scale runs can be found which can be played more smoothly and certainly by using the first four fingers in succession throughout. After all, it is a matter of convenience—not the editor's convenience nor that of the composer or the teacher, but the pupil's convenience.

In theory, a particular fingering may be logical and right and may suit some—but it cannot suit all. The short, stubby fingers—which have been known to do some fine playing at times—must receive different consideration from the long, shapely ones. It is in matters of this kind that the teacher has a shining opportunity to use his judgment and common sense; and the pupil (who has passed the earlier grades) has an equally luminous opportunity to use *his* brain.

Individual thought and the use of some sort of initiative are positively indispensable in music study if results are to be adequate and permanent. This one phase of musical activity—fingering—gives an abundant opportunity for the exercise of whatever initiative either pupil or teacher may possess.

Where no departure is made from primary forms, all scale and arpeggio passages will be done by means of the conventional fingering as taught in the earlier grades. When variations occur the fingering will depend entirely on what has to be played. It might be said that good fingering consists in having a finger conveniently ready for any key that is to be depressed. To bring this about some thinking is necessary.

Except in the slowest of music—and then usually only in polyphonic music—one finger is never passed over the other; and yet young players do it, or try to, over and over again, in spite of its awkward uselessness. It is never really necessary—and it is always inconvenient—to use the thumb or any finger on successive keys. It is no uncommon thing for the player to find his right thumb on the last note but one of a descending passage. They then simply lift the thumb down to the last note. They are not thinking, and so it does not occur to them to turn a finger over the thumb. Another pupil will find himself at the end of a downward scale run with a black key for the last note and only the thumb to play it. In both cases the inconvenience could have been avoided by correctly fingering the earlier part of the passage. Let us look at this example:



If the thumb comes on the first note, ordinarily the second note "F" would be played with the third finger. But to have a convenient finger for the third note, it is obviously necessary to place the fifth finger on the second note. This is the simplest of all examples, but music is full of such places, for which the various rules of fingering make no provision. This is where initiative and individual thought come in.

Sometimes a passage may be fingered in more than one way. Try all. After deciding which is the easier one, adopt it. To do otherwise is to cause uncertainty, and there must be no uncertainty if piano playing is to be satisfactory to those most concerned.

It is recorded that Chopin taught his pupils to play similar passages with the same fingering, even when it caused the thumb to be used on the black keys. It is a good rule, provided it is not easier to play the passage in another way—and it usually is. Many years ago Joseffy taught his pupils to play all scales with the same fingering as the key of "C,"—not to establish a new scale fingering, but to make the fingers equally at home on both white and black keys. Such players as followed his suggestion will find it useful now, because in modern music the thumb is used freely on the black keys, both in scales and chords.

In the fingering of chords and arpeggios some judgment is necessary. Let us take for example the common chords of "D," "A," and "E" in the left hand. In each of these chords the second key (playing upward) is a black one. The invariable rule for fingering these chords (or arpeggios) is to use the fourth finger on this black key. Yet only one player in ten can do this conveniently. The third finger should be used. In the minor chords of "C," "G," and "F," the second key is also a black one, but it is quite convenient to use the fourth finger in these chords, and that finger should invariably be used.

A famous American piano teacher said at a state convention that if pupils could only be induced to use a little common sense, it would not be necessary to finger whole passages, disfiguring the music and adding to the teacher's work. But teachers seem to be obliged to write in the proper fingering for all passages that are out of the ordinary—and for many that are not. A little of the time consumed in this way might be used in trying to develop initiative on the part of music pupils; that is, where such development is possible. They then may gradually learn to depend more on themselves for the many things for which they now look helplessly to the teacher, who has enough to do to teach those things that the pupil could not reasonably be expected to learn by himself.

Crossing Hands

By S. M. C.

To young children a piece which requires crossing of hands is often a source of wonder and delight; and the eagerness with which they try to master it shows what importance they attach to this simple but showy device in piano playing.

The one important thing to impress upon them is that the hand which crosses should move in a graceful curve from the treble to the bass and *vice versa*; for in this way the distance can be more accurately measured than when the hand moves in a straight line. This will also prevent the striking between two keys which so often occurs when the crossing is not properly and carefully done; and there will be no danger of one hand interfering with the other.

As a preliminary exercise these curved movements may be practiced to good advantage without striking any keys, merely measuring the distance from one to the other with relaxed arm, thus forming a habit of accuracy which will be a distinct gain to the pupil.

Rapid crossings, in particular, form a stumbling-block to little pupils, who often strike one or two keys short or wide of the mark. A good way to overcome this difficulty is to have them memorize the passage so that they can give their whole attention to the keys they wish to strike. When the eye is forced to travel from the piece to the keyboard and back again there is always danger of losing the place and making mistakes.

Study Stimulants

By R. F. L. Barnett

A LITTLE talent plus real work will accomplish wonders; but a very small amount of indifferent practicing will not develop even extraordinary talent.

To the careless player the pedal covers a multitude of sins; but to the discriminating listener it merely adds one more to the collection.

Talent, intelligence and industry form a wonderful mixture; but they need a great deal of careful listening as a preservative.

Temperament makes an excellent seasoning for the fruits of labor; but for a steady diet nothing can take the place of hard work.

"BEAUTY in art is a relative result obtained from a mixture of different elements, often the most unexpected. Only one of these elements is stable and permanent and must be present in any combination; this is novelty. A work of art must be new and may be recognized as new if it gives one a sensation never before experienced."

—REMY DE GOURMONT.

"THE Secret of Success is constancy of purpose."

—LORD BEACONSFIELD.

From "Wonderchild" to Diva

Mme. Sembrich in 1879

Sembrich in 1897

Sembrich in 1908 as Mimi

© A. DUPONT, N.Y.

Mme. Sembrich to-day, with her pupil Dusolina Giannini, in her garden at Lake George

Seven years ago Madame Marcella Sembrich retired from the operatic and concert stage. Few singers have ever had anything like her experience. As a child she was a "wonderchild," playing the piano and the violin and making numerous successful appearances before the public. Deciding to become a singer she appeared with triumph at the principal great opera houses of the world. Since her withdrawal from the public, the singer has trained a number of the younger and foremost singers of the day. Mme. Sembrich is now a member of the Faculty of the Curtis Institute of Music.

An Interview Secured Expressly for the "Etude" with Madame Marcella Sembrich, World Famous Prima Donna

"NEVER do I recollect the time when music was not the chief interest in my life. Indeed, when a little child I thought that music must certainly be the chief interest in the life of everybody. I was born in the little village of Wisniewczyk in Galicia, Poland. My name was Praxede Marcelline Kochanska. My father, Kasmir Kochanski, had a great natural gift for music. He never had any regular musical instruction of any kind, but he played several instruments excellently and played most of the instruments of the orchestra sufficiently well to give instruction on many of them. My father taught my mother to play the violin after they were married. Her maiden name was Sembrich, and this name I adopted for my career.

Symphony Copied by Candle Light

"We were a most musical family. We formed a quartet composed of my brother as violinist, my father as cellist, and my mother as second violinist, while I played the piano. At the age of four I started to study the piano with my father. At six he taught me the violin. Naturally with music as his main source of livelihood and with a growing family, our means were extremely moderate. But we were gloriously happy with the joy that music brought into our simple little home.

True, we had to work very hard for some of the advantages we wanted, but there was a beneficial side to that. My father, for instance, coveted the scores of the symphonies of Haydn and Mozart. They were too expensive to purchase and therefore he borrowed them and set me to work copying them part for part from the score. Thus, when I was a little girl of ten, I had copied by the light of a candle many great symphonies note for note for all the instruments. I thought it rather an arduous task, but nevertheless was absorbed in listening in imagination to the instruments as I copied each line. You see, music took the place of dolls for me. When my father made me my first violin I was one of the happiest children in the world. I loved it dearly and fondled it with unbounded pleasure.

Early Successes

"At the age of twelve, being considered a wonderchild, I made many public appearances as a violinist as well as a pianist. My father, however, wisely realized that I still had 'everything to learn.' Accordingly he took me to Lemberg, Galicia, where I studied the piano with Prof. W. Stengel, who was also of Polish nationality, and at the same time became the pupil of Bruckman for the violin at the Conservatory. I continued the piano for four years with Professor Stengel, little realizing that one day he was to become my beloved husband. He felt that if I was to go on with my career I would require additional instruction. Accordingly I was taken to Vienna, where I continued the violin under Josef Helmesberger, the director of the conservatory, and the piano with Julius Epstein, senior. When Liszt heard me play one of his Rhapsodies on the piano and Wieniawski's arrangement of Polish themes on the violin, he was greatly pleased, but when he heard my voice he said:

"'Sing, sing for the world, for your voice is that of an angel.'

"This determined my career. Thereafter I began studying singing with Rochitanski in Vienna, and at the same time continued the piano and the violin. After one year I went to study singing in Milan with the younger Lamperti.

"In 1877 Professor Stengel and I were married and went to Athens where I made my debut in Bellini's 'Puritani,' and later returned to Vienna to study my repertoire with German text, and then followed a two-year engagement in Dresden at the Grand Opera. My debut in London at Covent Garden was in 'Lucia' in 1880, thereupon followed directly my season of Grand Opera in Madrid and the first of my fifteen seasons in St. Petersburg and Moscow. My debut in New York was in 1883, also in 'Lucia.'

Study in Holidays

"Despite the unbounded enthusiasm of the public and my ever increasing success, which placed me although so young on the plane with the great and already famous singers of that epoch—I thought that still finer results could be created, and so went for several summers during the holidays for a few weeks' study with the elder Lamperti at Como.

"In 1909, after a career of about forty years, I decided to retire from the operatic stage and continued for several years my concert tours in America and Europe. Gradually I began to feel the desire of transmitting to the young generation of to-day the art that I had learned so thoroughly and practiced so long. After the death of my husband in 1917, I withdrew entirely from the public platform and began to devote my time and energy exclusively to teaching."

Singers Must Have Musicianship

"Many students and singers come to me for advice and instruction, naturally more than I am able to help. The American girl, intelligent, industrious and with great ambition, expects to perform wonders without proper preparation. A girl who has the good fortune of being able to begin studying when she is eighteen to become a singer but has no previous sound musical foundation, as well as lacking a knowledge of languages, starts her study of singing with a great handicap, especially in these days when music has so advanced in complexity. The piano is literally indispensable for the proper study of rôles and thorough knowledge of the score. I found the violin invaluable as a study of intonation, legato and phrasing. We learn from violinists and they learn from us. With some the matter of pitch is inborn, with others it must be acquired by painstaking study.

Importance of Languages

"The general lack of knowledge of languages among many, many young students is greatly to be regretted. If one sings 'parrotwise' how can one have originality or feel inspiration. To understand the spirit of a language one must be able to speak it fluently, and at once acquire the habit of using clear vowels, rather than some horribly garbled sounds, and in like measure realize the importance of consonants. It is necessary, of course, to have grammatical knowledge but that must be supplemented by real speech. The careful study of languages trains the ear for quality. This is necessarily of immense value in learning true musical style and increasing one's power of interpretation. Sufficient stress is not laid upon speaking the beautiful English language with agreeable quality of voice and clear enunciation. When I do find real talent, it is a great compensating joy. Such a pupil realizes that voice is not everything but that brains and work are indispensable.

"It is an unspeakable help to the fine looking American girl when she also has assiduity, musical intelligence, good health, good carriage, a true knowledge of language and perhaps most of all when she knows how to listen and to hear. Those who earnestly entertain the thought of becoming artists should realize that it means sacrifices, as nothing worth while can be attained without readiness to give up amusements and willingness to make the most of each day, not only with vocal preparation in the company of Concone, Bordogni, Marchesi, etc., but also by studying harmony and languages. For instance when a young singer longs to have a career, and wants to study the Wagner rôles, how long will it take her if she has merely a superficial idea of the German language—she knows nothing of the poets, has never read a single book or play—how can she possibly suddenly acquire the deeper meaning of the text of an opera or the atmosphere of a song. I have studied all my life, I have sung with the great singers of my time, and still feel that as long as I teach, I am learning all the time as I study new problems with every pupil. It seems difficult to put the understanding of all this into the hearts of the pupils; they are so easily satisfied.

Lamperti and Legato

"When I went to the elder Lamperti for further study I knew that the great Maestro realized above all the value of legato. He was then seventy years old and living on the Lago di Como. He used to get fervently excited, and when I was singing I have seen him on his knees with clasped hands, appealing begging:

"'Da molto olio, per Carita, da molto olio.' (More oil, pray, more oil.)

"What he wanted was that rich smooth quality, the unsurpassable legato, which gives warmth, youth, color, freshness, elasticity—and without which the most promising voices must suffer in comparison with the voice possessing the real legato. Lamperti was insistent upon expression and used to say to girls who were without it, 'You sing like a frog,' but he said it with a kind of disgust which made the young women do a lot of thinking.

"The ability of creating dramatic, tender, joyful moods, and of coloring the voice accordingly, lies entirely within the penetrating power of the voice, mind and soul. Lamperti believed that genuine temperament belonged primarily to a magic quality of magnetism in the voice itself, supplemented by the talent of acting. With this in mind, overacting can never replace true temperament.

The Singer's Life

"The singer's life, however, is by no means one of incessant drudgery, or lacking in high lights, many of which are exceedingly humorous. At the outstart of my career there was an amusing incident in London which no one forgot who chanced to see that particular performance of 'Dinorah' at Covent Garden. *Dinorah's* pet goat, called by opera singers 'the second Prima Donna,' is usually very demure and well-trained. The one that was assigned to me had a reputation for sobriety and good stage deportment. To make sure that the goat will leave the stage at the proper time, a property man usually stands in the wings with carrots or a cabbage. When the goat sees these they are supposed to be so irresistible that she will at once leave the stage. On this evening, however, the goat was evidently of another mind. They called and coaxed from the wings in vain, one of the actors attempted to drag her off, but the goat resorted to her natural means of defense and rushed towards the prompter whose every effort could not induce her to budge from the glamor of the footlights. She was determined to be the first prima donna for once, which put the audience and orchestra in an uproar, and the performance could not go on till this impertinent diva was driven off the stage."

Mirrors for Hand Position

By Mrs. N. D. Wells

PIANO pupils will understand what is required to obtain a correct position of the forearm, hand and fingers, if a small mirror be placed at each end of the keyboard for the practice period. The mirrored movements reveal the correct position in an impressive manner and save much reiteration of teaching along that line.

AND now comes the inevitable question. Is there, then, one right interpretation for a musical work? Of course there is. But the responsibility of assuring that one, contrary to popular belief, rests not with the performer but with the composer.—EOLIAN REVIEW.

"Syncopated Pedal"

By E. H. Pierce

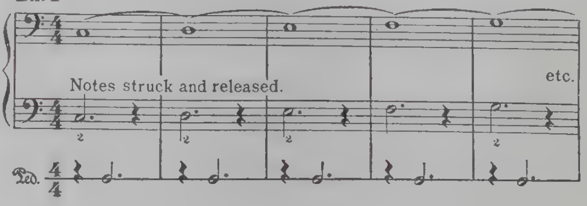
AMONG the numerous little technical details which, taken as a whole, distinguish really artistic piano-playing from that of the crude and common sort, is the judicious use of what is known as "syncopated pedal"—that is, the use of the pedal just *after* a note or chord is struck, but before the fingers release the keys. Rightly done, this produces a tone of purer and sweeter quality, and at the same time fully as strong as if the pedal is depressed at the same time as the keys.

There is a well-understood scientific reason for this. When a piano key is struck and the little felt hammer flies against the string, the tone begins with a percussion involving unavoidably a small, but none the less, appreciable degree of *noise*, along with the musical tone. Immediately after this percussion comes the loudest part of the tone, which in turn diminishes rapidly until silence follows. Tones in the bass last much longer than those in the treble, but all go through the same routine.

Now the damper pedal has two purposes: first, it prevents the dampers from falling back when the keys are released, thus prolonging the tone; second, as the dampers are lifted at the same time from *all* the strings, it allows the other strings to vibrate sympathetically, thus reënforcing and enriching the tone. (It is this property, in fact, which has gained for the damper pedal the common but incorrect appellation of "loud pedal.") When the pedal is used either before or exactly with the striking of the key, the slight degree of *noise* above referred to is reënforced along with the tone, and the whole combined effect begins to die out about as rapidly as when no pedal is used. On the other hand, when the pedal is used, just *after* the percussion of the hammer, the sympathetic vibration of the other strings begins to fill up the tone just at that point of time that it is most needed—namely, when it would otherwise be dying out rapidly. This serves to equalize matters, producing a tone of more smooth and singing quality. Incidentally, it gives no chance for the momentary harshness of the blow of the hammer to be magnified by the same sympathetic vibration. We have spoken of the sympathetic vibration of the "other" strings; but this should not be understood to apply to them all. Those which are chiefly affected are the octaves of the notes struck, along with the twelfths, fifteenths, seventeenths and nineteenths; the octaves *below* also may respond slightly.

The best exercise to acquire this use of the pedal is as follows:

Ex. 1 Correct Effect

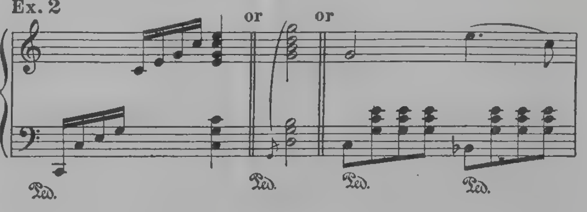


Make use of only one finger, say the second, and *listen to the effect carefully*. If there appears to be a break in the perfect legato of the tones heard, your pedal has been lifted too early; if the tones overlap and blur, your pedal has been held down too long. Practice it until it becomes instinctive to do it exactly right.

When Not To Do It

The syncopated pedal can be used only on notes of at least a moderate length. If attempted on very short notes, the first note will fail to be sustained at all. On figures of the following sort, the pedal must be put down with or even before the stroke of the first key. Pupils who have spent considerable effort in acquiring the syncopated pedal sometimes need to be reminded that there are places where it cannot be used, such as

Ex. 2



These call for the use of pedal promptly with the stroke of the key, or better still, just *beforehand*—the very reverse of the syncopated pedal.

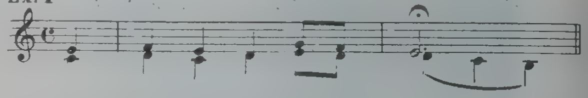
A Lesson on Stems

By S. M. C.

"WHY is it," said Ethel, "that some stems go up and some go down, and some notes have double stems?"

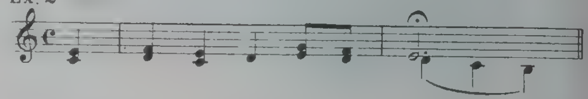
"The reason is very simple," said the teacher. "Notes placed on the third line or any line or space above extend downward from the left side of the note-hand. All notes below the third line have the stem extending upward from the right side of the note-head. In piano music we often find two or more notes attached to one stem, extending either upward or downward. In writing in two or more parts, however, where each voice is a separate melody, it is customary to keep the parts distinct by having the stems of the higher voice extend upward, and those of the lower voice downward. For example, here is a passage from 'Bach's Passion Music:'

Ex. 1



In piano music it might be written:

Ex. 2



using single stems except where it is necessary to distinguish the voices, as in the last measure. The double stem on the note D shows that the alto and soprano voices combine on that tone. The dotted half-note in the second measure is held for three beats by the soprano, while the alto sings D-C-B. Piano pupils are often careless about holding the long notes. A few lessons on the organ would show them the seriousness of this fault which is so often disregarded by piano pupils."

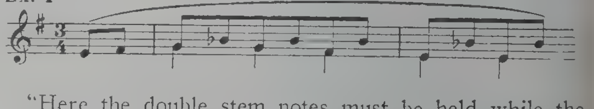
"I admit that I have often failed in this respect," said Ethel, "simply because I did not stop to think. Now, there is one more question I should like to ask. Sometimes two notes are written on the same degree of the staff, one with the stem upward, the other downward. Why should there be two notes instead of one?"

"This is because one voice requires a note with a hollow head, that is, a half note or a whole note, and the other voice has a note with a solid head, a quarter note or an eighth note. In this case we cannot use a double stem, for a whole note with a stem would no longer be a whole note, nor would it be possible to write a half-note with a solid head. Therefore, the two notes must be written side by side, as shown in the following example:

Ex. 3

"The C is held while the D is being played. These double stems also serve to mark important tones in the melody, as in the following example from Grieg's *Dance of the Elves*:

Ex. 4



"Here the double stem notes must be held while the next eighth-note is being played. Careful pupils need not be reminded that a quarter-note equals two eighth-notes, and should be held for its full value, except when marked staccato; yet, as a matter of fact, pupils are often remiss in this respect. They forget that attention to details is of the greatest importance in learning to do anything worth while and especially in mastering the difficult art of music."

"IT is not until the artist knows and is face to face with his feelings that he can find a right form for their expression."—RUTLAND BOUGHTON.

O Music, sphere-descended maid,
Friend of Pleasure, Wisdom's aid!

Collins

"THE roadway to the mind is shorter through the ear than through the eye. Relieve the mind of the impression that notes are important and the learning of the most intricate music becomes comparatively simple."

—FRANK LA FORGE.

How to Go About Studying Bach's "Well-Tempered Clavier"

By *EDWIN HALL PIERCE*

Progressive Order in Which to Take Up Each Number

EVERY piano student who pursues anything like a thorough course, sooner or later becomes familiar with Bach's *Inventions*—a book of very improving but rather dry studies which train one in polyphonic playing, but give little hint of the composer's real genius. Some also study a few of his more melodious lighter works, such as *Gavottes, Bourees, Minuets.* His real genius, however, is most evident in his sacred music—the "Passion according to St. Matthew," the "Christmas Oratorio," the great "Mass in B minor," and some of his Cantatas—and next to that, in his organ works, some of which have been transcribed in a masterly manner my Liszt, as piano pieces, but need a virtuoso to perform them properly. But the most available and widely known work wherein the pianist may arrive at a true appreciation of Bach is his "Well-Tempered Clavier," a collection of forty-eight preludes and fugues, published in two volumes. So universally is this known that even beginners have usually heard it mentioned until the name begins to have a familiar sound to their ears; yet too often it happens that they never progress so far as to know it at first hand; for, frankly, many of the pieces are extremely difficult, although, if one will but pick and choose a little, there are several numbers which may be studied with pleasure and profit by pupils of moderate attainments.

Bach has been called "the musician's musician," for it has been by other great musicians that he has been most keenly appreciated. Beethoven, Mendelssohn, Schumann and Liszt all studied the "Well-Tempered Clavier" until they knew it practically by heart, and this not with a mere purpose of improving themselves, but *because they liked it*—much as a religious person reads devotional books.

One great misunderstanding arises from the fact that we are apt, at the present day, to regard a "fugue" as a form of composition too much the product of the intellect—a sort of musical mathematics—to be a means of emotional expression. This would often be true of fugues written by modern composers, but we must remember that in Bach's time it was such a commonly used musical form that the form itself offered not the slightest obstacle to a great composer's fullest personal expression. Schumann would never have been attracted by them simply as clever examples of good fugue-writing, for he had a most pronounced hatred of all that was dry, formal or mechanical in music. To him they were wonderful little pieces full of strong emotional expression, running the whole gamut from grave to gay, from profound to playful. We have no doubt that Chopin regarded them in the same way, and for the same reason, although he may not have expressed himself in the same words.

Origin of the Work

Ruskin, somewhere in his *Modern Painters,* remarks on the fact that occasionally a great artist will produce a real masterpiece as the result of what seems a merely accidental or trivial cause. A painting intended to cover a mouse-hole behind a door might turn out to be something wonderful, while a huge historical picture intended for a public building might chance to be "as dull as a Dutch grammar." One is reminded of this when considering the origin of the "Well-Tempered Clavier." The words "well-tempered" have reference to the *system of tuning*—in fact, the system now universally in vogue—which differs from the system used in Bach's youth and before his day. In very early times, it was customary to tune the piano (or rather, the harpsichord, clavichord and organ) as perfectly in tune as possible *in the key of C,* letting other considerations take care of themselves. The result was, that these instruments would be in fairly good tune in the keys of F and G, less so in the keys of D and B flat, and very disagreeably out of tune in all keys having many flats or sharps.

Bach did his own tuning, and either invented or was the first prominent musician to adopt, what is now known as "equal temperament," in which all keys are equally good. To illustrate the advantage of this system of tuning, he wrote twenty-four preludes and fugues, representing every possible major and minor key. These were completed in his 38th year, while he was living at Cöthen, the date being 1722. Tradition says that he wrote most of them while on a journey in the company of his prince, the Grand Duke of Anhalt-Cöthen. If so, they were probably written away from any musical instrument. A few of them were borrowed from earlier works of his own. One in particular, the *A minor Fugue,* bears marks of having been originally intended for the organ, as it contains some long sustained notes which would not be as effective on other keybord instruments. The same is possibly true of the *Prelude in E minor.*

The second book, likewise containing one prelude and fugue in each of the twenty-four keys, was composed twenty-two years later, and bears marks of being more carefully worked over. The fugues of the second book embrace possibly less variety than those in the first, but impress the critic as *smoother* in certain ways. The first book contains fugues in two, three, four, and five voices; those of the second book are all either three-voiced or four-voiced.

Hints for Study

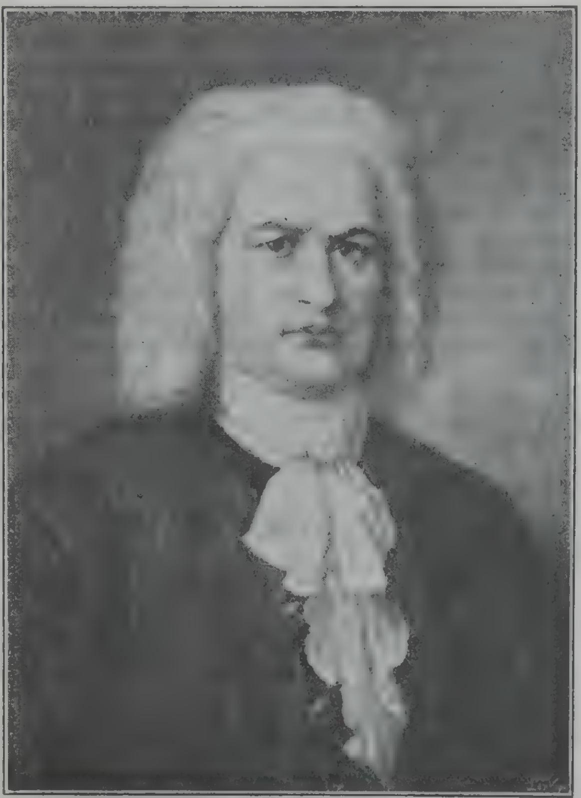
To explain the structure of a Fugue would demand an article by itself. At the present writing it must suffice to say that a Fugue is a composition built up on one musical subject (in rare cases, two or three subjects) which appears first in one voice, and then by turns in the other voices, governed by certain accepted laws of imitation. It is one point of good fugue-playing, that wherever the "subject" appears, it should be distinctly and expressively heard. Bach left almost no directions at all as to the tempo or other *nuances*—those found in modern editions have been added by various editors. A good musician will not bind himself to a strictly mechanical regularity of tempo, but will endeavor to follow the proper expression. To be sure, the *tempo rubato* of Chopin would be very much out of place, but there is room for occasional ritardandos, accellerandos, crescendos, diminuendos, and in some cases even for a real change in tempo in the course of a piece, though this last remark would apply only to certain of the Preludes, (for instance, the second Prelude), not to the Fugues.

We shall now make a few observations on several numbers found in the first book, which is the volume most likely to be found in the hands of the young musician.

The First Prelude, in C major, is, as it stands in the original, a charming little piano piece, of no great depth or difficulty.

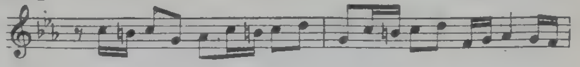
Doubtless very many of our readers are already familiar with it in Gounod's transcription, in which a soprano solo part is added to it, with the words of the *Ave Maria.* The same has been re-arranged again as a violin solo, a cello solo, a trio for violin, harp and organ, as well as for other combinations of instruments.

The Fugue which follows this is among the more difficult ones, and had best be reserved for more advanced study. The second, *Fugue in C minor,* is one very commonly used for the first study in fugue playing, although the tenth,



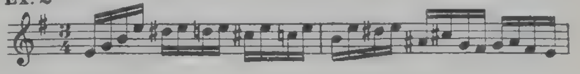
The Vogel Portrait of
JOHN SEBASTIAN BACH

Ex.1



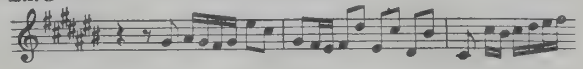
Fugue in E minor, is easier, having only two voices to manage. It is about the same grade of difficulty as the *Two-part Inventions.*

Ex.2



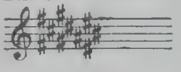
The third *Prelude and Fugue* shows Bach in a very joyful light-hearted mood, and should be played buoyantly and at a fairly brisk tempo. The *Prelude* is among the easier ones; the *Fugue*

Ex.3



is somewhat more difficult. In some editions this prelude and fugue are in D flat, in some, C sharp, which sounds the same, but is a little harder to read, with its seven sharps in the signature. It may interest students to know that in Bach's original manuscript there were *ten* sharps—

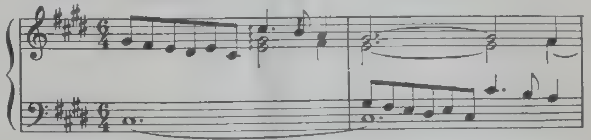
Ex.4



This did not mean that the notes E, F, G were "double-sharp" but only reminded the player that the sharping applied to both octaves.

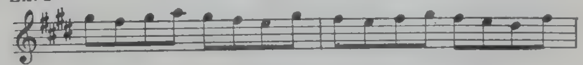
In the fourth, *Prelude and Fugue in C sharp minor,* we find Bach in an entirely different mood—his soul pondering over all the sorrows of the universe, and oppressed by their mystery.

Ex.5 **PRELUDE**

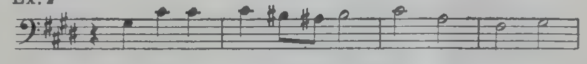


One is reminded of Hamlet's soliloquy, in Shakespeare's immortal tragedy. The technical student of fugues will be interested also to observe that in this grand five-voiced fugue there is not only the subject given out at its beginning but also two other subjects which enter later.

Ex.6

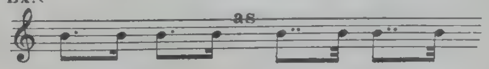


Ex.7



In the fifth, *Fugue in D major,* it will be necessary in some places, though not in all, to execute the figure

Ex.8

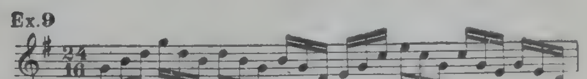


The double-dot was not so written in Bach's day, but had to be inferred by the player, where the context required it.

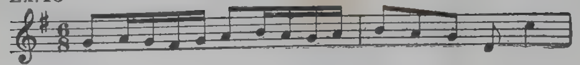
Prelude VI, though in a minor key, is playful or even joyous. It should be rendered lightly and gracefully, and is not beyond the powers of any good player of the *Inventions.*

Prelude and Fugue XII, (F minor), though of masterly construction, show Bach (especially in the Fugue) in a very morbid and pessimistic mood. In spite of the vast difference of style, there are a certain few compositions of Chopin (not his best) which reveal exactly the same spirit. We are glad to be able to turn ahead a few pages and refresh ourselves with the gayety of number fifteen in G major.

Ex.9

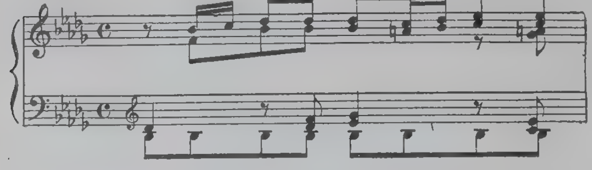


Ex.10



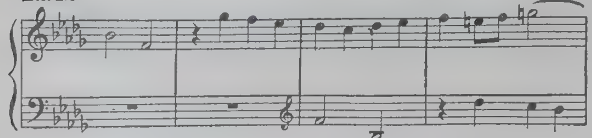
Prelude XXII (*B flat minor*) is like the cry of a wounded heart.

Ex.11



In the Fugue which follows it, we feel him recovering a manly equilibrium and a sort of sad courage.

Ex.12



It would be easy to carry out this appreciation in further detail and comment on each one of the twenty-four numbers, but enough has been said, we trust, to give the reader an insight into the treasures which lie concealed in the "Well-Tempered Clavier."

Space will not permit us to do more than barely mention the second volume. To those who feel inclined to study this also, we recommend beginning with the Fugue in E flat.

Self-Test Questions on Mr. Pierce's Article

(1) Where is Bach's true genius most evident?

(2) Why is Bach "The Musician's Musician?"

(3) What was the origin of the "Well-Tempered Clavier?"

(4) Should a Fugue be played always in strictly regular tempo?

(5) Which one of "The Immortal Forty-Eight" had ten sharps in the original manuscript, and why?

Something About Accents

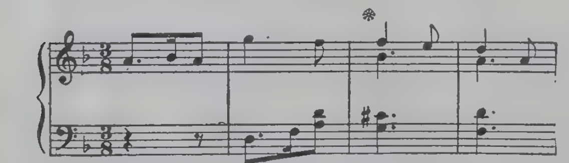
By F. L. Willgoose

Accents are the means by which we maintain a firm grip on the rhythm. They are of two kinds: Those which give the measure its ordinary pulsation, and those the composer uses to give added expressiveness to his music. These latter are the ones which add to the emotional intensity of a passage. Sometimes the writer indicates them by certain familiar signs (sfz, - >) but very frequently the performer introduces them to increase the effectiveness of a phrase whether indicated or not.

Now regarding these latter accents. Did you ever realize that there are five ways of emphasizing a note—of making it stand out from among its immediate neighbors? Here they are:

1. By applying additional stress or force (the obvious way).
2. By clipping a little off the note just preceding (very effective in light, graceful, airy themes).
3. By holding the note back the smallest fraction of a beat, thereby bringing it in a trifle late (a powerful emphasis in music of an emotional character).
4. By a slight lengthening of the note (has a tender, caressing effect).
5. By a combination of any of the foregoing.

As a little exercise in the application of these effects, and to prove them to your own satisfaction, try them out on the phrase below, making the note marked with an asterisk the one you wish to emphasize. You will be almost startled by the change in character produced by the different methods.



"It is characteristic of true works of art that they often seem to create their own demand, the fact being that they arouse latent desires to wakeful life."

—Rutland Boughton.

The Immortals Protest Against Jazz

Brahms, Grieg, Mendelssohn, Rubinstein and Schubert Strike for Their Rights

By Ernst Felix Tschudi

The following amusing satire was translated for *The Living Age* from the Swiss *Neue Zürcher Zeitung.* It is interesting to imagine what many of the great masters of the past would think of the jazz of to-day.

The International Modern Dance Composers Society was holding its annual assembly in the Jazzband Hotel in the city of Irgendwostadt. During the course of the official proceedings several highly interesting addresses had been delivered, which dealt with the special purposes of the society. A prominent member had expressed his hope that in the dance music of the future some hitherto unknown but highly effective musical instruments which he had discovered by chance in a Negro shimmy chapel during a journey of investigation in the interior of Africa would come into more general use. In addition, the society had decided to establish a prize competition for a new and more effective final measure for the fox-trot, because the customary old *tàm, ta-ta, tàm-tam, ta-tàm, ta-tàm* had begun to wear out. A composer from Argentina complained bitterly of the English neglect of the tango and proposed—every other effort to popularize this dance in England having failed because of the conservative spirit of this race of islanders—that during the next dancing-season tango compositions should be sent out from English broadcasting-stations, in order to force the dance on the public.

The list of addresses had been finished and the President rose to say a word of farewell. Some impatient and thirsty members had already left their seats and were on their way to the American bar, when suddenly a crackling sound from the rattle which the President used instead of the customary gavel of earlier days called them back from their goal and forced them to return to their seats. A telegram, the first glance at which obviously bewildered the President, had just been handed to him by a chauffeur; and, his astonishment only increasing as he got further into the text, he had decided to communicate his amazement to the members before the official session closed.

When the big hall had once more grown completely quiet, the President rose and, after another glance at the contents of the dispatch, addressed the assembly as follows:—

"Ladies and gentlemen: although I am quite aware that the time has come to close our session and begin dinner, I am compelled to ask the indulgence of our honorable members for a few minutes longer. This telegram, which has just been received from the Marconi radio station, is worded in such an extraordinary way, and comes from such an incredible source, that I feel compelled to read it at once.

"You will understand my amazement when I tell you its point of origin. The dispatch was filed last Sunday evening at the telegraph office in the Milky Way in Heaven (murmur and astonishment through the hall), and is signed by the following persons: Johannes Brahms, Edvard Grieg, Felix Mendelssohn-Bartholdy, Anton Rubinstein, Franz Schubert.

"I see from the surprise in your faces that, like myself, you have never heard of any of these names; and yet—from the very first moment it seemed to me that I had heard one of them somewhere; and I remember now that on the title-page of a book of music that had belonged to my grandmother I once read the name of Felix Mendelssohn-Bartholdy. This leads me to believe that he—and quite probably the other gentlemen as well—belongs to that curious group of old composers whom we call 'the classic school,' all of whom, of course, died long ago. I shall not keep you waiting for the telegram any longer, but shall read it at once."

With these words, which threw the whole assembly into the highest pitch of expectancy, the President lifted the telegraphic blank and began to read. The dispatch ran as follows:—

Milky Way Telegraph Station, Heaven

International Modern Dance Composers Society
Jazzband Hotel, Irgendwostadt

We, the undersigned five composers, herewith enter formal protest against the desecrating use of our divine music for fox-trots, rag-time, and so forth.

We have, perhaps, no right to broach the question whether modern dance-music can properly be called music at all, or whether it is a mere concoction of noises. It may be quite appropriate to the decadence of your age. The memory, however, of the beautiful dances to which we devoted ourselves in the bygone days when we were on earth compels us to look with regret on the path which dance-music has since followed.

The chief object of our message is to protest against the theft and desecration to which our works have been subjected. In order to protect our own dignity, we find ourselves at length compelled to give expression to our dissatisfaction and to warn you against further offenses. These are the crimes of which your members have been guilty:—

Among modern dance-orchestras the custom—and a very bad custom it is—has grown up of playing the *Fifth Hungarian Dance* of Herr Johannes Brahms as a fox-trot. It stirs the depths of the soul to hear this delightful little dance shattered by banjos and punctuated by the clacking and shrieking of jazz instruments. It is enough to make a Hungarian, in sheer despair, howl himself—if he did not have the blessed recourse of flight.

Other jazz bands delight to play *Ase's Death* from the "Peer Gynt" suite of Herr Edvard Grieg as a syncopated shimmy; and without the faintest sign of compunction they have added effective accents to these profoundly melancholy strains by introducing strokes of the gong and blasts from the trombone, besides accelerating the tempo.

Among the dances that met with the greatest success in your last season was one called *When the Leaves Come Tumbling Down.* The composer has been lucky enough to remember the *Spring Song* from Mendelssohn-Bartholdy's "Songs without Words" and made use of this melody for his popular hit. No wonder his newest creation was such a success.

These three examples are enough to show you how much is amiss in your modern dance-music; but we have still further grounds for complaint. In your dance-halls one often hears a wonderful dance called the *Boston,* which can be unmasked as nothing more than Herr Anton Rubinstein's *Melody in F,* with its two-four time transformed into three-four. Many of your dancers have been delighted with the lovely introduction to the fox-trot called *Romany Love,* without the least suspicion that this comes, note for note, from Franz Schubert's *Moment Musical.* Good old Franz himself would never have dreamed that his work might one day be twisted into a fox-trot. It takes a fair share of shamelessness to do our work over into dance-melodies and give it out as a product of your own brains....

At this point it became absolutely impossible for the President to read further, for he was interrupted by hisses, hoots, and catcalls which were loudest in the corner of the room where the American composers had their seats, and where the shrieks and whistles and howls of protest reached a deafening pitch.

Things for Which a Music Student Can Work

By W. L. Clark

1. To play with facility.
2. To comprehend the composer's meaning in each selection that you play.
3. To play in such a way as to obtain beauty in tone production.
4. To observe good players, so that you yourself may see wherein lie their strong points in execution.
5. To maintain correct time.
6. To read notes rapidly and accurately.
7. To obtain correct position of the fingers and wrists in playing.
8. To become a good player—not satisfied to remain mediocre.
9. To master gradually more difficult compositions.
10. To maintain the dignity of the musical profession, both by stressing the study of the best music and by becoming capable of constructive criticism both of your own and other people's playing.

Getting the Most from Your Lessons

By SIDNEY SILBER

A Chat with Serious Piano Students

Mr. Sidney Silber, Dean of the Sherwood School of Music, has been for many years one of the most active of the pianists and teachers of the middle West. Mr. Silber was a pupil of Jedliczska, Barth and Leschetizky. He has appeared with the Berlin Philharmonic and with the Vienna Tonkünstler orchestras, as soloist. While Mr. Silber is best known for his interpretative work his success as a teacher has been notable.

What Do You Bring into the Studio?

You do, of course, bring yourself—that is, if you are on time, or even late, either because your teacher is not punctual about giving you a lesson or you were delayed or detained for one reason or another. But the physical phases of taking a lesson or of receiving instruction are not to be discussed. Rather, we shall consider some of the things which have to deal with those phenomena which almost invariably end in a tacit or expressed comment, in such meaningless yet far-reaching words as "I did it much better than that at home."

While such remarks are doubtless true, they are nevertheless aggravating to pupil and to teacher. To the knowing and sympathetic pedagogue they speak volumes; and it is his duty and pleasant responsibility to eliminate or modify, as far as is humanly possible, all the conditions which seem to make such remarks necessary to excuse or explain short-comings, defects or failures. It is precisely this phase of taking a lesson which will occupy me during this heart-to-heart talk.

Why Do You Fail?

Assuming that you love your music, your study, and also that you like your teacher; assuming, further, that he does nothing to inspire fear or embarrassment (which is only one of the many forms of fear) nor self-consciousness (the worst form of fear), there can be but a few reasons for your comparative or total failure. They are:

1. Inadequate, unintelligent, unscientific preparation without definite objective and goal.
2. Lack of the feeling of responsibility and gratitude for the opportunity to develop your divine gifts—or, in other words, laziness, shiftlessness and attendant evils.
3. Lack of understanding of the inner import and purport of the music which has been assigned to you for assimilation.
4. Unwillingness to "make haste slowly" in mastering the various elements of study.

It is, of course, assumed that there is no fault on the part of your teacher, that you are one of those fortunate creatures who has found the right teacher (for you). And by the "right teacher" is simply meant a competent, conscientious, painstaking, persevering, patient, inspired and sympathetic pedagogue, who ever exults in telling you pleasant things about yourself and your work only *when they are true* and who does not mind telling you the reverse, though it cause both of you pain and discomfort.

Destructive and Constructive Criticism

It is obvious that destructive criticism has no practical value when it depresses and defeats further aspiration —when it is offered only in comment upon work done. There is nothing bad in such criticism except when the teacher fails to back it up immediately with constructive comment and criticism. How is this done?

The Teacher's Constant Duty

If he is the right teacher for you he must:

1. Be able to discover your defects and shortcomings, their first causes, and suggest proper remedies for overcoming them.
2. Be able to demonstrate practically how your music (scales, exercises and compositions, in part or totally) sound to him.
3. Be able to demonstrate practically how such music should sound to you.

If you have understood him in all things, then, in the words of the Good Book, *"Go and sin no more."* You can do this only by trying—trying—trying; again—again—and again! If you try intelligently, you simply must succeed as far as you were intended to succeed—nothing more, nothing less.

If you have understood your teacher in all things, "make no bones about it." Prod him with questions and never let up until you have learned all of the truth as far as he knows it. Remember that, if you follow these suggestions, you will inspire him and he will then be your debtor; for the only real teaching comes from those who live to teach and not from those who teach to live.

Interesting Piano Lessons

A successful and interesting lesson is a fifty-fifty proposition. It must be mutual and reciprocal. Unless it is, either you or your teacher has not done his fullest duty to the other or to himself. I once asked Godowsky where and how he learned everything he knew. His answer was: "Everything I know, I owe to myself, and to my pupils—*but especially to my pupils.*"

Think over these words of a great master and:

1. *Go and sin no more.*
2. *Seek and you shall find.*
3. Leave only your worst self at home, if you have such a "fairy" in your home or if that is a part of your "make-up" (your spiritual "make-up," of course) and,
4. Bring only your best self to the studio.

If you will do this, you will leave from each lesson refreshed, inspired and a better student, possibly a better pianist, musician and artist than when you first opened your teacher's door and—it is hoped—greeted him or her with a smile and bade him the time of day. If you have had "rainy," that is, tearful, days in the past, you will without doubt find that you will henceforth have only "fair and clear weather."

What Do You Take Out of the Studio?

We will assume that you have taken, and received, an inspiring, stimulating lesson. All the conditions have been as they should be; that is, you have done your part before entering the studio, have adequately prepared your lesson, and that your teacher has not only corrected all literal mistakes, but also has dwelt upon your technical defects and imperfections by not only analyzing but also demonstrating them in practical manner. Lastly, that he has shown you just how to proceed in order to improve upon your offerings.

Forming Correct Habits

At this point, you will find, upon reflection, that it is necessary to proceed along certain well-defined lines, if all that has been discussed and demonstrated may take proper effect and thus become part of your sub-conscious activity. For it is the sub-conscious mental activity which really counts in the student's development and education. It is this department of mental activity which alone makes for the permanence of habits correctly formed, so that everything done becomes so well defined that good playing, as well as good study and practice, become truly habitual in the best sense of the word.

Good Habits and Bad Habits

Does it not seem strange that most individuals go to so much trouble to form bad habits when experience proves that good habits are easier to form than bad ones? Take, for example, the contracting of a bad habit, such as smoking tobacco. The system does not crave nicotine; yet the young man (and nowadays even the young girl) goes to a great deal of trouble and through a great deal of physical discomfort to contract this habit. The first effects of tobacco smoking are discomfort and nausea. It is true that with each successive smoking the sensation becomes less distasteful, and after a while the first signs of a certain pleasure become noticeable. This pleasure (?) goes on a crescendo until a point is reached when the system craves the weed. At this point "it is up to the individual" to decide whether he shall control the habit formed, or whether he shall become a slave of what, before long, will prove a consuming passion—in some cases, even a fatal passion. This is not meant as an argument against tobacco smoking, for the writer is himself an addict of the weed. But he did not begin until his nineteenth year, and even to-day (as he has again and again proven) he can dispense with and discontinue the habit which has never become a passion and can never become so because he still insists upon using his will power. In other words, he is not a slave of the habit or the passion. Inasmuch as his physical or mental health shows no deterioration of efficiency, he sees no reason for terminating what is now and has always been to him a real pleasure, a comfort and a sedative.

Now, instead of speaking of smoking (a more pointed case might have been made against the indulgence of alcoholic liquors), let us speak of what is ordinarily looked upon as beneficial; that is, the "habit of eating." Even the partaking of the best and most nutritious food may become a curse instead of a blessing, for which latter it was undeniably intended. The system, when exhausted or run down, craves food (fuel). Just enough of this should be consumed (masticated, digested and assimilated) to satisfy the bodily wants and needs. Anything beyond this spells excess and waste. The conclusion then is: *Anything, whether good or bad* (viewed only in its effects upon physical and mental life and health), *if indulged in to excess* (which can be measured only in individual terms) *is or may become a consuming passion, and is, therefore, deadly in its ultimate effects.* Apply this to piano study, practice and playing, and you have a perfect analogy.

After Your Lesson—What?

Now, what do you do immediately after such a lesson as above described, or, for that matter, after any lesson? You wend your way homeward. What do you think of during this period? Do you revolve in your mind what has been said and done? Or do you, like so many other well-intentioned but by no means self-directed individuals, merely throw your music roll into a corner to be opened a few days later when you feel the necessity of practicing in preparation for your next "treatment"—your next lesson? Does the proverb, "Out of sight, out of mind," apply to you as soon as you have bade your instructor "au revoir" and closed his studio door? If that is your procedure—your method—it may possibly account for your slowness of development, or even for your stagnation, which always spells retrogression. For when you stand still, it means that you are content to watch the procession of more serious and better directed students to pass you in the march towards achievement and success. Follow these suggestions for a change and you will find wonderful changes and, without doubt, improvement:

1. Try to find a reason, or reasons, for everything that has been said and done during your lesson period.
2. Make up your mind to follow the definite directions of your mentor—for every good instructor, teacher, pedagogue, is more than a guide; he must, indeed, be your friend and mentor—if you are to scale the greatest heights of which you are capable.
3. Compare what you have done with that which you are expected and should do, and profit by the demonstrations. Insist always upon practical demonstrations, as this is clearly the duty of your mentor.

Solvable and Unsolvable Problems

Only clear understanding of problems ever facilitates their proper solution. There is assuredly nothing more discouraging or heartrending to the young student at school to whom, for example, a problem in mathematics is assigned than, after repeated efforts, to find the answer incorrect, or, worse still, to conclude finally that this particular problem cannot be solved. On the other hand, while this particular student may not be able to find the correct answer, he will, if sufficiently determined, persist until he does find the correct answer if only he knows that the answer can be found. The only consciousness which will compel him to persist, if he is sufficiently in earnest, will be the knowledge of the principle whereby the problem is to be solved. It is the duty, then, of the "mentor" to show him the principle, for there is a principle underlying every soluble problem in piano playing from the mechanical standpoint. In this realm it can always be stated in words and can also be demonstrated. In the realm of interpretation, however, which is not an absolute science, but dependent upon a multiplicity of individual attributes, it can be indicated vaguely in words, but can always be demonstrated through sound, provided the pedagogue is an artist.

The Inner Urge

The great governing factor in the solution of all problems, whether mechanical or interpretative, is the Inner Urge. Blessed are they with initiative, for they shall have success. Without this attribute (I was almost tempted to say "beatitude"), all study is more or less futile. Without it, the student is in the same condition as the mechanically perfect, well-adjusted automobile, which, even though it is supplied with high-test gasoline, well greased and clean, stands in the show window, waiting only to be sold and to be driven. To further elucidate: The student and his equipment represent this automobile which requires four wheels in the running: good health, physical as well as mental; good playing mechanism, devoid of physical defects, such as crippling; intelligence, and musicianship. But just as the automobile will not run until a well-controlled, intelligent driver sits at the fifth wheel (the steering mechanism); so, without the Inner Urge—the Joy of Communication—feeling, thoughts, moods and emotions—the student's efforts are of no earthly practical value or use. Finally, make up your mind to go "pleasure-riding" instead of "joy-riding."

Resume

1. Meditate on what has transpired during the lesson.
2. Seek to find a way, or ways, of solving your problems (one at a time, please!) from the time you have left your teacher to the first opportunity (as soon as possible!) of approaching the piano for purposes of experiment and application of principles advanced.
3. Never become discouraged. If at first you fail, try, *try, try again.*

A Parting Word

To the chronically discouraged:

Directions: Take the following internally, and shake yourself thoroughly after "taking."

A little cork fell in the path of a whale,
Who lashed it down with his angry tail;
But, in spite of his blows,
It quickly arose,
And floated serenely before his nose.
Said the little cork:
"You may flap, flutter and frown,
But you never, never can keep me down;
For I am made of the stuff
That is buoyant enough
To float rather than drown."

Keep this always in mind—and become a "corking" good piano student!

Competitive Recitals

By A. Lane Allan

To stimulate the interest of her pupils a certain teacher holds a "competitive recital" at the end of the term.

All the pupils of a certain musical ability, or of those that have been playing about the same grade of music, are given the same piece and have lessons on it during the same space of time. Judges are then selected to choose the pupil that has played the selection in the most satisfactory way.

Just here is the point at which the recital differs from those usually given—the judges do not see the performers! Each pupil is given a number. The pupils are in the music room, the judges and the audience in the next room. Thus age, attractive personality, and other discriminative features do not enter into the contest at all. It becomes just a test of musical ability.

When the decision has been reached by the judges, the pupil chosen is allowed a number of lessons free of expense as a reward for good work.

This plan has been found to be a wonderful stimulant for pupils that are otherwise but mildly interested in doing better than someone else. Incidentally it brings excellent results from the point of view of the teacher.

"A PERFORMER with a sense of musical integrity, when he believes that his interpretation is a faithful rendering of the composer's idea, will never venture to change the least retard, the least diminuendo, the least thirty-second note. 'But this relegates the art of interpretation to mere mechanics!' will exclaim my Chopinic friends. Well, dear ladies, is not life a perfect machine? And do you not consult your physician when your body, another machine, does not function with the perfect regularity of a Swiss watch?"—CARLOS SALZEDO.

Music's Higher Pleasure

By Francesco Berger

Hon. R. A. M., London, and F. G. S. M., London

NOT long ago I read a review of a book, then recently published, by a well-known musician. I have not seen the book, nor am I personally acquainted with its author, though I know him to be a man of standing. The review in question quotes the following as an extract from the book: "If you like music in an unthinking and sensuous way you are only like a cat basking in the warmth of the sun, without regard to the source of satisfaction." I have also noticed in other writers about music that they maintain one cannot enjoy music as it should be enjoyed without technical knowledge of the art.

This dogma (I have difficulty in refraining from writing "catma") I beg leave to dispute. I do *not* believe that acquaintance with the theory of music or familiarity with instrumentation adds anything whatever to the pleasure we derive or may derive from hearing a finished orchestral performance. *I believe in the exact reverse.* In my opinion, to know *how* a thing is done, and *why* definite results are the outcome of definitely prepared arrangement *detracts* from enjoyment.

I do not deny that some pleasure may be derived from scrutinizing a score; nor do I deny that for the music student such scrutiny is an essential part of his education. What I deny is that our pleasure is *increased* by expert knowledge. Expert *knowledge yields* a *different* kind of pleasure, but it certainly is not *keener*, nor deeper, nor higher, than that which can be and is enjoyed by persons of average culture without technical acquirement.

Although I claim to be a musician, when I go to hear an orchestral work I wish to receive a general impression of it as a whole. I do not want to listen to it piecemeal, to find pleasure in discovering whether this effect is produced by horns and 'cello or that one by viola and bassoons, and to measure my enjoyment accordingly. Such considerations bore me, irritate me, disturb my original purpose, which was to lay myself completely open to the impression and appeal of the entire work, apart from detail. After I have heard it, I may derive additional pleasure from examining the score, at my leisure at home, and I may discover bits of beauty, rare combinations, fresh ingenuity, which, at first hearing, had escaped my notice. But I cannot admit that this sort of pleasure is comparable to the other. The sensuous way of the cat is, to me, the higher, the fuller way.

If you look at a splendid building, does it add to your delight to be told how many tons of iron went into its construction, how many loads of wood, how much stone, where the materials came from, how they were conveyed to the site of the building, how much they cost, how long the edifice took to erect? I say "No, it does not." These details interest the architect and the builder, not you or me. What the general public demands is a handsome building, well suited for its purpose, commodious inside, elegant outside, well lighted, well ventilated, and, if possible, of novel design. The how, and why, and when of these matters do not affect your judgment.

Take another illustration. We dine together at a fashionable restaurant and you find a particular dish exceptionally delicious. Do you (unless you are a restaurateur yourself) want to interview the chef to ascertain what ingredients went into the preparation of that dish, what quantity of each, where he obtained them? I do not think so. I think the less you know about these matters the greater will be your appreciation of the excellence of its flavor.

The cat enjoys the sensuous pleasure of basking in the sunshine. Do you think it would enjoy it any the more if it knew all about the sun; knew how far it is from our earth, what its size is, or its weight, how many other planets besides ours are lighted and warmed by its rays? Would that cat be a better cat or a richer or a happier one if possessed of this information?

When we read Shakespeare it does not materially enhance our enjoyment to know all there is to know about him. It is not necessary, in order fully to appreciate the beauty of his thoughts, the philosophy of his plots, the poetry of his language, his pathos or his wit, to know what was his personal appearance, how often did he change his linen, had he any *amours*, had he any debts, was he a gross eater, what were his vices. Our delight in "Hamlet," in "Macbeth," in "Romeo," in "Merry Wives" would surely not be heightened by such knowledge. I do not believe that biographical, critical or traditional lore can in the least alter our estimate of his genius or augment our enjoyment of his plays.

I cannot help protesting that too much attention is being given, too much importance is being attached, to *matter*, and too little to the *spirit* of music. New orchestral combinations, fresh harmonic progressions (often inharmonic), unusual chords (very like discords) and bizarre rhythms (often extremely barbarous) are paraded ostentatiously and are allowed to monopolize too much of the hearer's time.

Much modern music has little else to recommend it than obtrusive "manufacture." In the manufacture of it the present race of composers is far ahead of its predecessors. But it is in the spirit of their work that they are sadly wanting. What does their music convey? Does it convey anything at all, or is what it does convey worth conveying? To tell us the same old tale, but in a different language, is but a slight achievement. What we ask of the composer of every age is that he shall produce music that gives us fresh feelings, fresh emotion, fresh stimulus to fresh thought. In other words, "spirit"—and blow the means by which he does the trick. To exalt the means above the end is to invert the most elementary object of all art.

Technicalities are for pedants, or for scholars, and the majority of men are neither the one nor the other. Our lives are short and often gray and solemn, and the mission of music is to relieve us from gloom and sorrow by carrying us into realms of fancy. But we don't want to be taken there by omnibus labeled "violin," or "flute," or "trombone," nor by train labeled "speed," nor by motor car labeled "noise."

Music is emotion—and emotion is *not* created by anything tangible. It cannot be acquired in the classroom, nor can it be controlled by the foot-rule of analysis. The emotion which music engenders comes to us from another world, and to hamper it with technical shackles is to kill the goose that lays the golden eggs.

New Brains, New Faces, New Ideas, New Conceptions, New Plans, New Inspiration

The ETUDE editorial cupboards have been undergoing a thorough housecleaning. All of the old and valued contributors, whose articles have helped our readers for years, have been invited to continue; but in addition to these we have secured a number of exceedingly fine articles from musicians of note and high achievement, who have not hitherto been persuaded to put their ideas into print. You will find a great "freshening" in THE ETUDE during the coming year—a new spirit of elevation which is especially necessary to all music workers just now at America's greatest hour of musical expansion.

How Song May Save the Purity of the English Language

By HAROLD RANDOLPH

Director of the Peabody Conservatory

A Little Symposium on English Vocal Diction, in which Many Famous Singers Give Their Opinions

WHAT is to become of the English language in this country unless we establish pretty soon something equivalent to the French Academy, a tribunal to which disputed points may be referred for authoritative settlement? England, though not so well equipped as France, would probably feel safe in regarding the best usage of Oxford as sufficient guide but where shall we poor Americans turn? Even if by chance we should happen to agree with Henry Mencken's theory that the language spoken in these United States is not English but American—or, to be more exact, "Amurrican,"—we should be hard put to it to hit upon a satisfactory linguistic Capital.

New York certainly would not do, for there neither English nor American is spoken, but "Newyorkese." New England is not only harried by a supposed duty (inherited probably from the Puritan fathers) of pronouncing words as they are spelled but is cursed by a nasal twang and a flat *a* (culminating in the "Baar Haarbor" of Maine, in which the *a* more nearly rhymes with *bat* than *tar.*) The South drawls its vowels, has no *R's* worth mentioning and never, in fact, crisply enunciates any consonant. Worst of all, in a way, is the middle West (beginning big end foremost with Pennsylvania) which uses habitually—not accidently or apologetically but deliberately and even conscientiously—a final *er* which inflicts almost physical pain upon a sensitive ear. This sound (as in the verb to *err)* has so tainted American speech as to have become the chief feature in what is called elsewhere the "American twang." Whether it is to a dispassionate listener as objectionable in speech as it sounds to me personally may be partly a matter of heredity and environment—plus idiosyncrasy—but its unpleasantness in singing would seem hardly open to question. If you doubt this listen to the next amateur sing "In the land of the sky blue waterrrr," or the Ukrainian Chorus (which has been out of luck in the choice of its English coach) in "Way down upon the Swanee Riverrr."

Where then shall righteousness be found? If we are not soon provided with some sort of a court of last appeal to which we can carry our linguistic grievances are we not in serious danger of ceasing to speak any one language and lapsing into a group of dialects?

As I myself, in the capacity of musical educator, am thrown with students from all parts of the country it has been impossible for me to escape a certain sense of responsibility as to this whole matter of "vocal diction," and I have sought in every direction some *thing* or some *one* whose decisions might be accepted by all, from whatever part of the country, as final when, for instance, I discuss the subject of the poisonous *er* with—let us say—a Pennsylvanian I can see in his eye that he is saying to himself: "But he comes from Virginia where they talk like the negroes. Of course a properly enunciated *er* sounds wrong to him." The answer to this *ought* to be merely the citation of the best English authorities, but for reasons before mentioned this usually fails to persuade.

It is vain to refer to Dora Duty Jones or Clara Kathleen Rogers, both of whom have written authoritative books on the subject, especially from the singer's angle. They are both, although long resident of this country, English by birth. I then mention Mr. William Tilly of Columbia University, who has been carrying on of late a crusade against this mispronounced—or at least greatly overpronounced *r*—and Mr. Windsor P. Daggett who writes so convincingly upon such matters in his "The Spoken Word" in the New York "Billboard." This helps a little, for the latter two are both Americans (at least I am told so) and Northerners; and certainly neither could be accused of having learned his mother tongue at the knees of a Negro mammy.

After having pondered the thing for some years I finally determined to send out a little questionnaire addressed to a few of the "acknowledged aristocrats of American Song" and to try to find what their views are upon some of the disputed points. In doing so, not merely fine artists were chosen but also those who might justly claim to have made a special study of English vocal diction; and the list was limited to those of American birth and, as far as possible, of American training.

As only about eighty-five per cent. found time to answer, the list from which I shall quote manifestly lacks the names of some whose opinions would have been at least equally valuable.

I should have been particularly glad, for instance to hear from George Meader, Herbert Witherspoon and Mme. Alma Gluck; but we failed somehow to connect. I purposely did not call upon Miss Mabel Garrison or John Charles Thomas as, both having received much of their training at our Conservatory, I might in so doing have laid myself open to the charge of having "stacked the cards."

There were five questions, as follows:

1. *"Mother o' mine."*

When the second syllable of this—and similar words—is prolonged, what vowel sound do you give the *er?* and how do you treat the final *r* both in this sentence and in one ending on *er*?

2. *People.*

When the second syllable is prolonged how do you manage it?

3. *Pretty.*

If the first syllable must be prolonged how would you sing it?

4. *Righteous.*

Give your exact pronunciation of this.

5. *Sat, that, etc.*

Where this vowel sound is prolonged do you modify it at all or sing it as you would speak it?

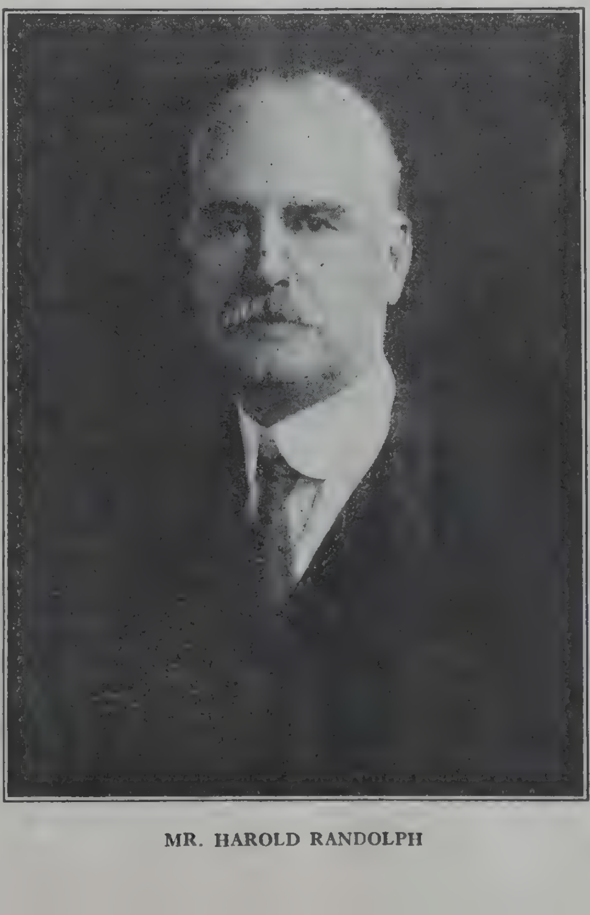
There are many questions that I should have liked to add, but feared to make the list too long.

Naturally, the first is to me by far the most important, and it was no little relief to learn that all but three of my correspondents agreed with my own view (of which, be it distinctly understood, I had given no inkling whatever in the original communication) that in this, as in all final *ers*, the vowel sound is that of *u* in *but* and the final *r* should be given a slight trill with the tip of the tongue. It was perhaps most concisely expressed by Emilio de Gogorza and Mme. Emma Eames, who wrote: "continue the first vowel sound unchanged."

Arthur Hackett, Percy Hemus and Miss Edith Mason give *ah* as the nearest equivalent, and Mmes. Florence Easton, Lucy Gates and Louise Homer, and Messrs. Orville Harrold and Reinald Werrenrath give either *u*, as in *but*, or *o*, as in *some*—which is of course the same thing. All agree as to a slight trill from the tip of the tongue in the final *r*.

The dissenting minority consisted of Mme. Hulda Lashanska (who, however, protested that she could not properly explain what she meant on paper), and Messrs. Frederick Gunster and Francis Rogers. The first-named thinks it should be sung *ere* (meaning, I suppose, *air*). I must take the liberty, however, of doubting if in practice she would actually do this, for her "vocal diction" has always seemed to be particularly good, and only the confirmed habit of studying singing with foreigners should have made her imagine that she ought so to pronounce it.

The other two claimed that it should rhyme with *her*. (Mr. Gunster in a subsequent talk showed a disposition to modify some of his written views.) Mr. Rogers, however, was quite unshakable in his conviction, even going so far as to say that the English sound of *u* in *but* is fit only for sea-lions and other grunting animals! This would seem to cast discredit on the first syllable of *mother* as well, to say nothing of *love, dove,* and similar words that have always seemed to me rather particularly mellifluous. But then perhaps I may have something of the "grunting animal" in me.



MR. HAROLD RANDOLPH

The other four questions, though of less importance, were by no means without interest.

To number two *("people")* several returned somewhat evasive answers, as for instance, "as it is written." This is manifestly impossible, for in speech the actual vowel tends to disappear around the tongue, which has its tip touching the roof of the mouth, and to make a long resonant tone in this position is simply out of the question. It can of course be sung in this way on a short or unaccented note, however. The real point is, should the second syllable be given the sound of *u* in *dull* or in *pull.* My own vote is unquestionably in favor of the later.

All agree in answer to number three that the first syllable of *pretty* should be sung *prit.* For my part, if I were called upon by a composer to dwell on the first syllable of this word I should simply choose another song.

It is strange how careless the average composer is in setting English words to music. Few, probably, would be guilty of the enormity just mentioned, but how few, on the other hand, would be wary enough to avoid prolongation of some of our notably unstressed syllables, such as the last in "certain," "sudden," "subtle" and "listen." It should be held as a high misdemeanor to dwell upon the second syllable of "patient," thereby forcing the poor singer to choose betwen "pashunt," which, though perfectly good usage in speech, sounds just a bit clumsy in song, and "pashent," which is schoolmastery and bookish and sounds unnatural under all circumstances.

Question number four opens up a wider field for discussion; as there is clearly something to be said on both sides. Most of my correspondents (dividing pretty much as in question number one) prefer "richus"—as I do also, but it is not quite so obvious that this pronunciation should be applied to all similar words. "Richus" happens to have a mouth-filling, biblical sort of sound, whereas "right*eeus*" seems prim and anemic. One can hardly feel quite so sure of "sichuate" or "gradjual," so perhaps the tendency towards "prunes and prisms" may in this case, and especially for singing purposes, be in the right direction, always provided that a wide margin of safety be maintained before turning "sugar" into "seeugar" and "initial" into "initeeal."

Question number five seems to approach more nearly to number one in importance; for it is in this matter that the foreign singer—and those of our own who have carefully studied other languages, but assumed that their own required no special consideration—most often offend. Many of my correspondents show a disposition to sidestep this point also, saying "we have no right to alter the English language." The plain truth is that our flat *a* sound is quite intolerable when prolonged, and every singer above the level of "musical comedy" does in actual practice modify it. The Italian *a* (*ah*) is of course not to be recommended, but there are many gradations between that and our *a*, as in *hat.* It is doubtful if this latter sound is ever permissible in singing except in a "pater" song. In a serious song it darts out at you like fireflies on a dark night. Of one thing I am very certain. If I were looking for a soprano for the "Messiah" I should never choose one who sang "a—and He sha-a-a-ll sta-a-a-nd" with the same vowel sound which she would used in speech.

To return for a moment before closing, to the pestiferous *r*. It is not merely in the final *r* that so many persist in pronouncing what should be a silent consonant. An even more prevalent fault is to make such words as "morn" and "part" sound as though they had two syllables: "maw-run" and "par-rut." To say that all *r*s should be definitely articulated either in speech or song seems about as reasonable as to require it of the sound of *l* in "would," the *k* in "knife," the *u* in "circuit" and "conduit," or the *p* in "pneumonia." As Mr. William Tilly said quite squarely in a recent lecture at Hunter College:

"When American school teachers tell their students to sound every printed 'r' they are not asking for the old trilled 'r' that was standard once upon a time, they are not asking for the modern untrilled 'r.' They are asking for the inverted 'r' which was never standard in cultured speech. If this curled-back 'r' has become somewhat widely planted in American speech it had its origin in the common speech of common people who brought the sound from common surroundings in England."

So there!

Perhaps to the general reader—if indeed any such shall have followed me thus far—all this may seem the mere splitting of hairs and "much ado about nothing;" but does it seem so to you singers? If so, perhaps you may have stumbled upon one of the reasons why you have not as yet achieved all the success of which you have dreamed.

Self Test Questions on Mr. Randolph's Article

1. *What consonant do Americans greatly over-pronounce?*
2. *How do you pronounce the following words: "Mother," "people," "pretty," "righteous," "sat?"*
3. *Should vowels be modified, when singing, or sung with the same quality as when spoken correctly?*
4. *Have we any tribunal by which we may judge correct English pronunciation in singing?*

The Value of Persevering Habits

By Leonora Sill Ashton

"No great thing is created suddenly." This is a truth expressed by Epictetus years ago, which should be cheering to the conscientious workers of every age. It should be an especial help to the music student, who is endeavoring to keep and build up his musical knowledge and skill by his own personal efforts.

Music lessons cannot go on forever. Financial reasons; the passing of the years; the pressing duties of life; soon sever many an earnest music student from the inspiration and help of the music teacher.

Rubinstein's words so often repeated, that "Genius is another name for hard work" may well be hung with this older adage, over the piano of self-teaching musicians, and be resolved into the practical expression of the "Value of Preserving Habits."

These I would enumerate somewhat as follows:

One-half hour every day during the morning, devoted to technical exercises: and one-half hour every evening to repertoire.

The half hour in the morning should be divided into three ten-minute periods.

1. Five finger exercises. Hanon, if you have them; Czerny, or any collection that may be on your music shelf. These should be practiced *slowly and deliberately*, with the wrist low, and the fingers held high, and falling with the weight of the whole arm concentrated on their tips.

2. Scales. Practice one scale a day, playing slowly at first, in the manner of the exercises; then increasing in velocity. Change the accent from time to time: First, two notes to a count; then three; then four; listening always for a smooth unbroken sequence. Attend very carefully to the correct fingering of the scales, which is given in nearly every book of technic.

3. Arpeggios. Ten minutes unbroken practice of these, at first slowly, as in the two cases mentioned above; planting the tips of the fingers deep down in the keys then accelerating the speed, so that they sound more like the beautiful instrument for which they are named; and finally playing them with as much lightness and rapidity as convenient.

This daily habit would not be a difficult one to form. Once formed it would become part of the pleasure of the day. You would soon begin to know results in the firm strength and skill of your hands; you would realize more and more how this daily habit would lead to the increased ability of forming the second one—that of actually playing for another half hour during the day.

You will not be discouraged with your pieces if your fingers grasp the notes surely and firmly, if your muscles are supple and responsive enough to bring a beautiful quality of sound.

"No great thing is created suddenly." Not all of us aim to do great things; but with perseverance in these "habits" of practice something very fine and beautiful is sure to develop.

"What is difficult or impossible for a contemporary to determine is the relative stature of an artist, the intrinsic or permanent value of his contribution to experience. A century ago men had far from made up their minds as to the respective merits of Mozart, Hummel, Beethoven and Rossini."

—Dr. George Dixon, English Critic.

Coloring the Piano Tone

By George Hahn

Without exercise of the imagination art would be as exact and as lifeless as a mathematical deduction. When applied to the pianoforte, this inductive faculty of the mind turns an otherwise cold and colorless percussion instrument into an artistic marvel.

It requires more imagination than digital dexterity to color the effect of keyboard manipulation. A really fine imagination, such as a genius might possess, is a gift; but almost all musicians possess some imagination. Otherwise they scarcely could attain proficiency in an art requiring so much of it.

When a player of high technical attainments lacks the power to impart requisite tone color to his playing it is at least partially due to a lack of imagination, that subtle quality of mind which in pianoforte playing penetrates the outer crust of notes and yields the pearls of artistic values lying within them.

Imitative characteristics are inherent in the piano. A semblance of flute and bell-like effects is obtainable in the upper octaves; imitative horn effects lie in the middle octaves; the lower octaves suggest the lower notes of the 'cellos and basses, or the 16-foot organ pedals.

Von Bülow used the terms, "quasi bassoon, quasi flute, quasi clarinet and quasi oboe" in the editing of Beethoven's *Piano Sonata in C, Op. 53.* In an explanatory foot-note he added, "There are more modulations of touch on the modern pianoforte than is commonly supposed. Hence a practiced, sensitive player is able to impart to the individual imitations in the subsequent episode quite a variety of coloring. This can be promoted especially by means of a vivid imagination of the peculiar tone-colors of the different wood-wind instruments."

The human voice furnishes an ideal instrument for imitation because of its natural tendency toward expressiveness. By humming the melody of a movement, audibly or mentally, in as expressive a manner as possible, and then attempting to transplant a semblance of such expressiveness to the keyboard, improved playing from an artistic standpoint will usually result. It will also be found that such analytical treatment will be a guide to the touch, nuance and dynamics, and to every other element that enters into beautiful playing.

Those who have been identified with vocalizing know that one way to gain improved vocal tone is to use the imagination. "Imagine the tone is coming from your forehead," said one teacher, "and try to get the resonance there." Of course, the tone is coming from the chords in the throat, but the exercise of the imagination in this way is expected to show an improvement in its production, and usually does.

Again, imagine the strings of a good orchestra singing the magic intervals of a beautiful legato, the 'cellos penetrating the mass of sound with pointedly acute inner themes, with the horns or other brass instruments adding an emphatic turn here and there. To imitate the singing characteristics of the violins is most important; and to do so will tend to eliminate the bangs and thumps to which the right hand seems a natural heir if not curbed by constant watchfulness or training.

Melodies played on the horns or trombones usually come in the middle register of the piano, and there are innumerable opportunities in piano music where the best effect is to imitate their customary combination of vigor and legato by just the right touch to produce that effect. To imagine how such instruments would sound when playing such passages will help in producing this tonal characteristic.

But, it may be asked, what about purely pianistic music such as Chopin wrote, much of which is neither orchestral nor vocal, even with the use of a vivid imagination?

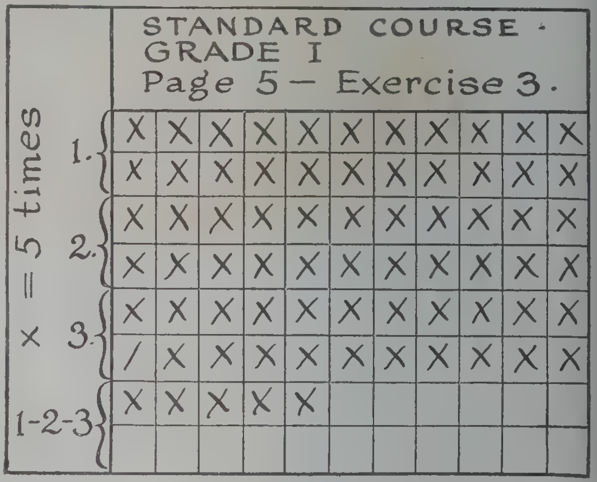
A goodly portion of pianistic music is characterized by broken chords or variations of broken chords. Such arpeggio effects are usually termed pianistic, but they are also harp-like. The harp is a constant attendant in symphony orchestras, so that arpeggio characteristics rightly cannot be considered exclusively pianistic. It is frequently advisable in playing music of this character to imagine how it would be accomplished on the harp and to attempt a similar crisp effect; in most cases the rendition would gain rather than lose.

There remain a minority of passages that are so characteristic of the piano that it is well nigh impossible to exercise the imagination in coupling them to any other instrument. But it still requires imagination to render them perfectly—a mental picture of the effect they reasonably ought to produce.

Making a Game of Practice

By Beatrice Imboden

When I began the study of piano, I had a very fine teacher. She had many clever ideas for lessening the tedium usually attached to music study. One of these utilized the "play-instinct" which is strong in us all, even though we have left behind the days of play. A part of our practice equipment consisted of a large ruled notebook, and pencil. Across the horizontal lines were drawn vertical ones, thus making rows of little squares. A goodly margin was allowed at the left for name of selection to be practiced, notes and other features as below.



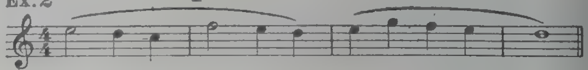
STANDARD COURSE -
GRADE I
Page 5 — Exercise 3.

x = 5 times

1.	X	X	X	X	X	X	X	X	X	X	X
	X	X	X	X	X	X	X	X	X	X	X
2.	X	X	X	X	X	X	X	X	X	X	X
	X	X	X	X	X	X	X	X	X	X	X
3.	X	X	X	X	X	X	X	X	X	X	X
	/	X	X	X	X	X	X	X	X	X	X
1-2-3	X	X	X	X	X						

The "game" was to fill these little squares with x-marks, each one representing a certain number of times a selection or measure had been practiced. If the passage was easy, it was divided into several sections of several measures each, these numbered 1, 2, 3, and so on. The number was placed in the margin opposite the row or rows allotted to it; and when it was played once, or five or ten times, as the case might be, an x was put in one of the squares. If a measure was difficult, it was played singly, five or ten or a hundred times.

Ex. 2



Each technical study and each "piece" was thus dissected and practiced. After each section of a passage had been practiced thus, in detail, the whole passage was played a certain number of times and more squares were filled with x's, the x standing for five or ten times it was played; and so on. Finally the whole study or "piece" was played through many times.

The teacher always examined these practice records very carefully; and we tried to show a well-filled page, the visible sign of our week's work.

This wise teacher never said "practice an hour or two hours"—that bugaboo of students. She said "Fill so many squares;" and, in trying to fill as many as possible, we lost count of time, and the practice periods passed all too quickly. It became a fascinating game.

My own small daughter is about ready to begin the study of music, and I shall adopt this "game" for her practicing, whether I teach her, or some one else does.

To this day, if I am practicing seriously, I use this method to regulate my own study. And I still treasure many old note-books with pages and pages filled with x-mark, the signs of my past studies.

A Musical Accelerator

By Aletha M. Bonner

The greatest accelerator to be used in speeding up musical activity is Praise. The pupil will appreciate words of approbation and be incited to greater efforts for the sake of continuity.

When teachers mark only the faults, how discouraging to the child. Its viewpoint embraces only the failure which is emphasized. As a natural consequence the sub-conscious mind is influenced into making greater mistakes.

Why not call attention to the smoothly-rendered passage, the careful fingering, the good pedaling, or place penciled stars on the page of a well-played exercise? The pupil's lesson can never be so bad but that some small feature worthy of praise will be found therein. Build on this as it may prove to be the foundation stone of a worthy musical structure.

Bringing the Music of the Community and the Music of the Schools Together

By PETER W. DYKEMA

Professor of Music, University of Wisconsin

The Curve of Educational Progress

PROBABLY at no time in the history of formal education have school and community been more closely interwoven than they are at present. Education began in the home. Our modern educational system traces its parentage to the monastery and the church school of the middle ages. The training for the learned professions, principally that of the priesthood, produced a type of education which was far removed from the ordinary affairs of life. Through several hundreds of years school and home represented two distinct and but slightly related educational influences. Within the past fifty years these two have been coming closer and closer together until now we have a condition stated in our opening sentence.

This condition is due to two sorts of influences. First, the school has come closer to the home. It has recognized that education is not a thing apart from life, but a part of it, and that the more closely education is related to the community, the more effective it will be. On the other hand, the home has gone to the school and asked that the teachers assume the responsibility for many activities and types of training that formerly were given in the home. This movement has been particularly true where the highly developed city life has taken away from the home the tilling of the field and the duties around the house which were formerly a part of the education of the child living in the small town or the rural district. As a result of these two types of approach, the school is constantly talked about at home and the home is subject to constant review in the school.

In no field has this interrelating of the two educational agencies been so marked as in the cultural subjects, especially music. The school is attempting, by the standard it sets up, to influence the type of music that shall be used in the home and in the community at large. The wise music supervisor says to herself that unless the songs of the class-room are carried to the father and the mother there is something wrong with the music instruction. On the other hand, the great increase in instrumental instruction in the schools and the granting by the schools of credit for private outside lessons in piano, voice, and other musical studies indicate that the home has already gone far toward abandoning that supervision of musical education which up until a few years ago was entirely the responsibility of the parents. It, therefore, is unnecessary to advocate the close relationship between school and community music. It is already an existing condition. The only question now is, "what can be done to make it better?"

Suggestion No. 1, Recognizing the Immediate Values of Music

The first essential in bettering present conditions is the recognition that music, to a peculiar extent, is valuable to the average boy and girl, not so much as a preparation for future living or livelihood, which are the main claims of grammar, spelling, science, and most of the subjects of the school, as it is for immediate use in developing an attitude toward life day by day. The little songs and musical exercises of the kindergarten and elementary grades are not primarily the basis for music study which is to come later. They are rather the food for the emotional life of the child during those early and impressionable years. When we apply this same idea to the high school we find that we are not so much interested that the young people who play in the band and orchestra should be preparing themselves for future professional use of this material as we are that we should fill their hours with a worthy leisure time occupation. It is true that we hope they may carry this music on into their adult life; but again it is for the purpose of making those particular hours pleasant rather than getting ready for something beyond. If this conception is true, it follows that there should be warm coöperation between the school, home and community, that the music should flow in a fairly even stream, meaning thereby that there should be much greater uniformity of standards of music used in study time and leisure time than now prevails.

Inter-relations Already Established

That great improvements are being made along these lines is evidenced from several instances which may be cited. Songs for little children in the school are drawn very largely from books which are sold for use in the home. The Music Supervisors National Conference for years had a standing committee on community music which prepared two collections of songs for community singing which are used widely throughout this country and Canada by community gatherings of various types and are found in thousands of schools. The music memory contest is carried on most intensively in the schools; but it is frequently initiated by public-minded citizens who seek and obtain participation not only from schools but also from the rest of the community—the women's and men's clubs, the Y. M. and Y. W. C. A., the churches, theaters, and the concert series. It is not at all uncommon, even in the regular music appreciation work of the schools, to have a theater's orchestra, the city band, and visiting artists, or, in the great cities like Chicago, Philadelphia, New York, St. Louis, San Francisco, and Cincinnati, to have the symphony orchestras to present programs made up entirely of material which is being studied in the school listening lessons.

The "Music Week" movement which in May, 1924, for the first time, assumed national proportions is another example of this close interrelationship among the various musical agencies of the country. The music of the schools flowed out into the community at large. The boys and the girls in vocal and instrumental groups appeared at noon-day luncheons, afternoon teas, theaters, and special public occasions open to the entire community. The adult musicians of the town likewise reciprocated by sending talent into the schools, industrial establishments, and various other places. This interchange must inevitably work for a raising of standards because all of it is based upon an educational conception. As soon as music is considered as an educational agency, the standards of performance immediately are raised. No one can comply with the request in the slogan of National Music Week, "Give more thought to Music," without immediately bettering the music to which he gives attention. Poor music is almost always music to which little or no thought has been given.

Suggestion No. 2, Better Prepared Music Supervisors

A second consequence of this desire to improve the relations between school and community music is the necessity of a much finer type of music supervisor than we have at present. The past twenty-five or thirty-five years have witnessed many changes. At the beginning of that period, practically anyone who could play the piano or who could sing, was considered capable of teaching school music. Then there came the conception that there must be some special preparation for teaching school music. This was stimulated by the large publishing houses which were putting out series of school music books. In order to make their book stand out from those of their competitors, novel features were introduced which needed to be presented in a special way. This meant the preparing of teachers who understood how to make this presentation. Thus there arose the book company summer schools, which were usually about three weeks in duration. These have practically disappeared because it soon became evident that they could give only a smattering of the preparation needed for the best teaching. Such book company schools as now exist attempt to give only the brushing up in the particular method employed in their special series. The teachers who attend must have obtained their main musical training from other sources. The successor to the three weeks summer school was the one year course for supervisors. This has likewise practically disappeared, having been replaced by two and three year courses in special music schools and general normal schools, and by the three and four year courses in universities. The ever widening and deepening separation plan for the supervisor school of music is evidenced by the fact that already one institution, Teachers' College, Columbia University, New York, is offering courses in school music leading to master's and doctor's degrees.

What Has Happened in School Music?

Let us consider the reason for these developments. School music at first was little more than note singing. This is a valuable feature and one that always will play an important part in music education. Its weakness lies in the fact that it leaves the children dependent upon the teacher for the acquisition of new material and greatly restricts the opportunities for anything beyond single voice or unison singing. The same reasons that led to the establishment of the old-time singing school caused the introduction of note reading into the school system.

It is in connection with this problem that the great advances in school music have been made. These steps are to a great extent paralleled by those made in the teaching of reading (literature). Starting with the old alphabet or isolated note plan, developments have led to the so-called song method of to-day. In this children start the acquisition of technical or sight-reading ability by an examination of some connected whole, such as the song or a natural division of it, and gradually with the power gained through commanding parts of the familiar song proceed to the conquest of parts of unfamiliar songs. With this gain in sight-singing came great extension of part-singing, until it is not uncommon now for high school students to attack and render creditably material that a few years ago was known only to the adult choral society.

The next widespread movement was the introduction of specific training in listening to music. Before the advent of the phonograph and player-piano, school children had few opportunities of hearing music other than what they themselves produced. Valuable as concerts by the adults of the community are, these would necessarily be infrequent and hardly suited for intensive study. The advent of the mechanical music producers, with their vast repertory and their willingness to repeat any selection as often as the needs for careful study demand it, made possible the great attention to music appreciation which is now sweeping through all schools with increasing force.

Another great movement in music education has been the spread of instrumental performance and instruction in the schools. Small oddly assorted groups of instruments have sporadically appeared for many years in quite a number of high schools throughout the country, but these were always the haphazard contributions which the home made to the schools. Only within the last ten years have the schools definitely assumed the task of training their own instrumentalists and forming their own bands and orchestras. Now no school system, even if it has but a single supervisor for high school and grades, is complete without a high school orchestra. In the most highly developed systems each high school has an orchestra of symphonic proportion with an auxiliary or feeding orchestra, one or two bands, and one or two chamber organizations. In every grade building there will be an orchestra, and in several there will be a band. Opportunities will be offered for instruction free of charge in violin, 'cello, cornet, clarinet, trombone and practically every instrument of the band and orchestra, including oboe and bassoon. Piano classes of from eight to twenty in a group will take care of children from the third grade up. In the lower grades, preliminary work with toy instruments will have developed a sense of rhythm and the ability to come in at the appropriate places in the music. The whole school music system is built around the idea of making it profitable for every child to learn at public expense to play upon some musical instrument as a normal and necessary part of his education.

The Flower of the Training—The High School Music Contest

The results of this stimulation of musical talent, both vocal and instrumental, are already evident in those remarkable high school music contests which are being held in various States. In the spring of the year the high school students of Michigan, Wisconsin, Indiana, Ohio, Illinois, Minnesota, Kansas, Nebraska, Missouri, Iowa, Oklahoma, and doubtless other States of which the writer has not heard, come together in centers of their respective territories and compete. The piano, violin, flute, cornet, 'cello, trombone and vocal solos of all voices, the female, male and mixed quartets and choruses, the bands, orchestras and chamber music groups including string quartets and wind ensembles present results that astonish musicians who are unaware of what has been going on in the schools and give promise to everyone of a great musical America.

A Great Field for Highly Skilled Toilers

It is evident that the supervisor who is to guide the musical program of such extent and of such high quality as have been hinted at in this review must be a person of unusual power. He must have the general education which will enable him to see music broadly so that it can be fitted into a general scheme of education. He must have the natural equipment and the training necessary to teach wisely and happily the wide-awake youth of to-day. He must have the musical equipment which will insure a recognized standing, not only with the children of the school, but also with the musicians of the community with whom more and more school music must establish harmonious relationships. General knowledge, teaching skill and musical ability—these form a trio of accomplishments which will have to be refined to a greater and greater degree, if the school music instruction is to bring about that intimate relationship between school, home and community which means a unifying and integrating of all the music forces in these three institutions. The supervisor who has these qualifications and who, through constant study and experimentation, can continuously keep apace of this rapidly developing subject has a rich reward in store. Salaries are constantly rising, until now the income of many supervisors is equal to that of the superintendent of schools. Social status has already been granted until the supervisor is often recognized as the most important single musician in the community. Above all, the satisfaction is present of being engaged in the most potent means for bringing about a musical America that exists or ever can exist. In music, as in every other field of education, the future of our country rests mainly with the schools.

The "Key-word"

By Henry L. Richardson

This is suggesting no "open sesame" to all things musical, but simply a help to the optical element in reading.

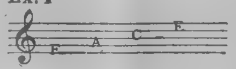
The "key-word" has proven its efficiency in developing remarkable speed in the identifying of tones located outside the staff.

By the "key-word" is meant a word which may be shifted about on the staff and used as a means of familiarizing the names of the degrees thereof.

The common method of teaching the treble clef spaces as "F" "A" "C" "E" becomes broadened into a working standard for spaces and lines consecutively.

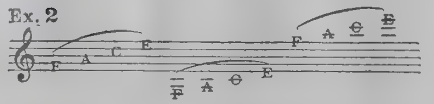
Take, for instance, the treble:

Ex. 1



becomes

Ex. 2

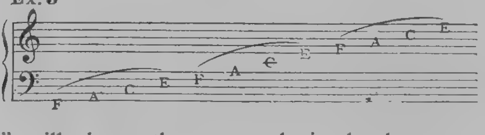


and the leger lines above and below are read at sight, while the intervening tones are the letters that precede or succeed the lines.

Thus, to read the third line above the staff means simply "F-A-C-E," "E" being the tone sought. To read the fourth space above means "F-A-C-E," and the space above this "E" is "F."

Another and equally useful application of our "key-word" is to show the relation of the lines and spaces in the bass as compared with those of the treble clef. By the accompanying diagram we find that the "key-word" still shows the way and simply drops a whole space in position in the bass register, then takes up the fourth and fifth lines, the intervening middle C line and the first line of the treble clef, showing that there is one line, and one only, between the two staves.

Ex. 3



"Growth is attained generally by industry, the exercise of patience and a willingness to accept constructive suggestions recognized as valuable. Nearly every one, who has made a lasting impression, has developed under trials and disappointments. They have served as upbuilding factors, just as they always will. On that account it is the wise person who welcomes obstacles which must be overcome, for easy sailing never promotes fibre in a man."

Schubert's "My Dream"

By Walter Dahms

A Poetical Autobiography of Franz Schubert

Only a small number of letters and personal documents of Franz Schubert have been handed down to posterity. His life was so full of music that he had little time to spare for the production of other written records of his life. He lived with his friends at Vienna, ignorant of the onerous duties of fame, an easy-going Austrian. When he wished to vent his grief or his joy, to give utterance to his experiences and hardships, he naturally resorted to the medium of tone. We, however, read the gigantic volume of his musical productions and endeavor to shape out of its treasures a picture of Schubert the Man. Still, the more we learn to love the Musician, the more we long to know of the Man. And thus we cherish every available record helping us to attain a better and more clearly defined acquaintance with his life and thoughts.

Unknown for a Century

A document that has remained unknown to this day is Schubert's short story called "My Dream." This story is as shown for the first time in my biography of Schubert, closely interwoven with the man's own life. The master presents us a poetical description of his struggles for a life of art against his father's will. He had begun to compose when he was still a pupil at the seminary. But, as he neglected his duties at school on that account, his father forbade his return home. After his mother's death, a reconciliation was brought about between father and son that lasted until the time when the choice of a profession renewed the conflict. Franz Schubert was to be, like his father, a schoolmaster. He entered upon this career, as a matter of fact, for a couple of years, in order to evade compulsory military service. Later, however, the man's genius proved triumphant and broke through all impediments. His father, once more, shut his house against the son until the time when he finally understood that he was not born to be a schoolmaster and that genius demanded unstinted freedom. They remained on friendly terms thenceforward.

It was in 1822 that this reconciliation with his father took place. Schubert already had attained complete mastery of his art. He had produced, in the course of this year, with sundry other works, the B minor Symphony (the "Unfinished," as it is called) and the "Wanderer's Phantasy" for the piano. It was then that Schubert, striving to give utterance to his joy, wrote the following poetical autobiography:

My Dream

"I was brother to many brothers and sisters. Our father and mother were kind. I bore deep love to them all. Once upon a time my father took us to a banquet. My brothers had a merry time indeed, but I was sad. Then my father, turning to me, ordered me to partake of the delicate fare. I was unable to do as he bade; whereupon my father flew into a rage and banished me from his presence. I took myself away and wandered to distant places, my heart being full of infinite love for all those who would have none of it. For years I felt my being torn between the greatest pain and the greatest love. Then I received the news of my mother's death. I hastened to see her. Nor did my father, softened by affliction, hinder my entrance. I saw her corpse and the tears flowed. She lay before me like a picture of the cherished past in which she wished us to live, as she lived.

Pain Changed to Love

"We followed the corpse, mourning our loss, and the coffin disappeared. Thenceforward I remained at home once more. After a time my father took me to his favorite garden, again asking me whether I found it to my taste. I, however, had taken a great distaste to this garden, without daring to utter my thoughts. Then he asked me a second time, the color rising in his face, whether I liked the garden. Tremblingly I replied I did not. Then my father smote me, and I fled. I turned away once more, and wandered forth to distant places, my heart full of infinite love for those who would have none of it. Songs did I sing now, for many, many years. When I sang of love, it would turn to pain, and when I was fain to sing of pain only, it changed to love.

"Then I was told of a saintly virgin who had expired not long ago. A circle was drawn round her tomb. Within it a number of young men and old were ever wandering as though in ecstasy. And they spoke softly as if careful not to awaken the Virgin.

"Heavenly thoughts seemed to scintillate from her tomb unceasingly, like feathery sparks, upon the surrounding youths and to emit sweet sounds while they were moving. I was then seized with a great yearning to walk in their company; but I was given to understand that nothing less than a miracle might allow me to step within the hallowed circle. Yet I strode slowly with lowered gaze, devoutness and strenuous faith within me, up to the virgin's tomb, when lo! faster than I had deemed it possible, I beheld myself within the circle which emitted a wonderfully sweet sound. And I felt as though eternal bliss were pressed into a single moment. I also beheld my father tenderly reconciled; and he folded me in his arms and wept. But my tears flowed even faster.

Franz Schubert."

Schubert, speaking of "the banquet" and the "delicate fare," meant the sciences. His father's "favorite garden" stands for the profession of a schoolmaster. The "Virgin's Tomb" is the sphere of Music, where all things are changed into blissful sound. The reader will readily recognize, behind these touching words, the experiences Schubert actually met with in his father's house.

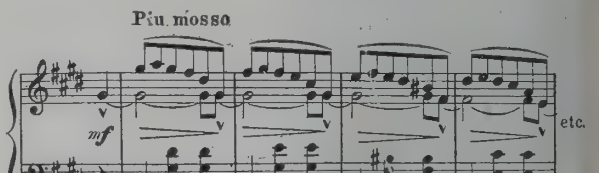
Expression and the Inner Melodies

By Caroline V. Wood

So much beauty is lost by always playing piano pieces through in the conventional melody-and-accompaniment style (without much emphasis on the melody). Many of us do not seem to realize that the composer had a soul which he has tried to express in his compositions. When it becomes a mere matter of just so many agreeable-sounding notes, intervals and chords, it is time to stop and do a little thinking, and feeling as well.

A great deal of expression can often be brought out in a piano piece by seeking inner melodies and giving them judicious emphasis. Sometimes we find inner melodies that were probably never thought of by the composer himself. Do we not remember reading about how pleasantly surprised Schumann was upon hearing one of his own compositions played by Liszt in a way that he had not conceived when composing it, but which he declared greatly added to its beauty. We are free to interpret music as we please, and probably no two musicians would feel it in exactly the same way; but the great crime is that so many do not interpret at all; they just play the printed notes in front of them. Of course this is not music in its real sense.

The writer well remembers how Josef Hoffman put new life into Chopin's *Waltz Op. 64 No. 2,* by bringing out a hidden inner voice in the *Piu mosso* part. The effect was something like this:



Amateurs so often lose the best that is in a piece by playing it too fast. They hardly glance at the title, practically never glance at the tempo, and as a result they do not get into the spirit of the thing at all. They are too apt to pass by the pieces that do not have an abundance of black, interesting-looking chords. Iljinsky's *Berceuse, Op. 13* is not even considered—yet what tenderness can be put into it by one who really feels its simple charm.

If you have a phonograph and want to see for yourself the reason for all this "preaching," get Paderewski's record of his own *Nocturne in B-flat, Op. 16, No. 4* or the Rachmaninoff record of his own *Prelude in C Minor.* Nothing can better illustrate the exquisite beauty that lies in the inner melodies. One could write volumes on the subject and still not say as much as the beloved tone poet has done in this one composition.

The Teachers' Round Table

Conducted by PROF. CLARENCE G. HAMILTON, M.A.

This department is designed to help the teacher upon questions pertaining to "How to Teach," "What to Teach," etc., and not technical problems pertaining to Musical Theory, History, etc., all of which properly belong to the Musical Questions Answered department. Full name and address must accompany all inquiries

Studies and Assignments

> (1) What studies would you suggest for a pupil who has completed the third book of the *Mathews Graded Course?* She plays carelessly and will not take time to study out the troublesome phrases. She will practice scales and arpeggios when I assign them, but in the same slipshod manner. If I give her a piece which is not marked "Third Grade" she seems insulted. Please suggest some pieces for her.
>
> (2) Of what should an assignment consist for the average second or third grade pupil?
>
> (3) Name some good studies for the second grade.
>
> (4) How many lessons should it require for the pupil of average ability to complete the *Beginner's Book* and the *Student's Book?*
>
> M. M.

(1) A careless pupil may sometimes be brought to her senses by a course of rigid polyphonic music. Try the *Little Preludes and Fugues* by J. S. Bach; and follow these by Bach's *Two-part Inventions.* Let her spend a whole week in playing each one with the hands separately before putting the hands together.

Beethoven's *Nel Cor* variations; Massenet's *Aragonaise* from the *Ballet le Cid,* and Cui's *Canzonetta* are promising pieces for her.

A pupil of this sort needs to be driven with a tight rein. Give her music that will interest her, if possible; but don't let her dictate to you!

(2) Such an assignment may well consist of:

(a) Some purely technical work—a few scales or arpeggios.

(b) A study in which this technical work is applied, if possible.

(c) Part of a new piece.

(d) Memorization of a piece or part of a piece already learned.

These are essentials, to which may be added, if there is time, review of a former piece, and sight reading of specified material.

(3) Burmuller: *25 Easy and Progressive Studies, Op. 100.* Brauer: *12 Preliminary Velocity Studies, Op. 15.*

(4) It is difficult to answer this question definitely, since so much depends on amount of practice, ability of pupil, and other considerations. I should say that each book, with extra material in the way of pieces and studies, might well occupy a season's work of thirty to forty lessons.

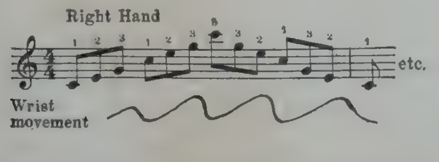
Awkward Fingers

> I am teaching a boy of fifteen who plays the scales well—in thirds, sixths, two and three notes against one, and so on. His arpeggio playing, however, is stiff and awkward, and he often misses the notes. Is his trouble due to his hands, which are large and have broad-tipped fingers; or am I expecting too much from one of his stage of advancement? He plays third grade pieces and also the three arpeggio studies in Duvernoy's Op. 120.
>
> He is a brilliant and careful student; and I would be glad if you would suggest some exercises to overcome this.
>
> MRS. G. W. H.

Fingers with broad tips are often difficult to manage, as they are apt to spill over from one key to the next. I suspect, however, that the chief trouble lies in stiffness of wrists, which can be helped in the following two ways:

(1) Insist on a considerable amount of forearm rotation, especially with slow practice. Particularly in playing with the thumb the right hand should roll well to the left and the left hand well to the right so that the hand-weight is in either case balanced on the thumb. Then, in playing away from the thumb, let the right hand roll to the right and the left hand to the left.

(2) When playing with the thumb, let the wrist fall to the level of the keys, but in playing with the second, third and fourth fingers, let it gradually rise so that the wrist describes a series of up-and-down curves as here illustrated (the wrist falls in playing with the fifth finger):



The above motions are, of course, reversed in playing with the left hand.

Slow practice with an exaggerated observance of these motions should free the wrist from all muscular stiffness, and will at the same time furnish an opportunity for extreme accuracy in tackling each key. After all rigidity is thus eliminated, the tempo may be quickened, and the motions gradually diminished, until they are only slightly evident to one who is watching the hands of the performer.

Loose-Jointed Fingers

> I have a pupil fourteen years old who has a good piano hand and can reach an octave with ease. But the first joints of her fingers are too limber, since the fingers are inclined to bend outward, and in playing the scales or any other quick passages the fingers apparently get in each other's way. I have shown her the correct position of the hands and have given her such exercises as a slow trill to be played with each hand alone. I am giving her Czerny, Op. 299, Clementi's Sonatines, and so on.
>
> Will you kindly advise me if such work will remedy the condition of her fingers? Is it right for me to encourage her to study music as a profession—to teach music?—L. T.

You are, in my opinion, dealing wisely with the pupil in the matters of technic and music. I should place unusual emphasis on the curvature of the fingers. Let her hold her fingers firmly, as though grasping a ball; and give her some five-finger exercises to perform on a table, so that her mind may be concentrated on the finger-positions. These exercises (such as the slow trill) should be played so slowly and carefully (perhaps with the metronome) that each finger-tip hits the table-top without allowing the finger to bend outward as you describe. Care should meanwhile be taken to keep the wrist loose.

I should not worry over the case, since her fingers, if properly guided, will probably take on more stability as she grows older.

As to her becoming a professional musician, there are many other items to take into account. Does she really love music? Has she natural gifts of concentration, patience and good taste? If so, you are justified in encouraging her, despite the disability which you mention. Apt fingers are desirable for the pianist; but apt brains are even more important!

The same teacher asks also:—

> Should I insist on the correct position of the hands of the small children, and is the age of seven too soon to begin their study of the piano?

The best way with young children is to lead them unconsciously into correct habits, without elaborate directions or undue nagging. An occasional suggestion as to the betterment of the hand-position or the use of the fingers is more to be desired than a long harangue on the subject. If the fingers are unmanageable, try some simple exercises such as those which I have suggested above, making these as short and pithy as possible. And so be contented to remedy each defect as it appears

A bright child ought to be ready for piano lessons by the age of seven, or even earlier provided these lessons are short and frequent, and that his practice is properly supervised by parents or devoted relatives. A sane course of kindergarten work, in which he associates with other children, is a good preparation for regular private instruction.

Variable Piano Actions

> In giving lessons at the homes of my pupils I find that the action of the keys of a given piano varies. At times the action will be easy, so that the child has no difficulty in pressing down the keys Then again, observing that the child plays with apparent difficulty—on the same instrument—I try the action and find it hard.
>
> What is the cause of this variation?—L. T.

There are two possible explanations of the phenomenon you mention. One is, that of climatic changes. During the winter, when a piano stands in a room in which the air is very dry from furnace heat, the wooden parts tend to shrink, so that the action loosens up. During the dampness of summer, however, the wood swells, so that the joints become clogged, and the keys often stick; with the result that the action becomes apparently "thick" and "muddy."

But I suspect that much of the trouble is purely psychological. Perhaps you have just been playing on a piano with especially easy action, so that the new one seems stiff, or vice versa. Then, too, our personal feelings often have their influence. On a bright, snappy day, when one's blood is active, the touch of the piano seems to respond to our mood, and to take on a new resilience; whereas a dull, heavy day will have just the opposite effect. Sometimes, too, a piano is draped and decorated until its tone sounds muffled and its action consequently seems hard. Try, in this case, opening the top, consigning photographs and plush scarfs to oblivion. Or, if the piano is an upright, pull it out a little from the wall, or free it from deadening rugs and hangings. You may get into trouble with parents who dote on lavish ornaments; but it is part of your job to convince them that a piano, like a person, cannot be stifled and yet carol joyously!

When to Use the Metronome

> Do you recommend the use of the metronome for piano practice? K.

Under certain conditions, yes. Everyone should cultivate an accurate sense of time-proportions; and there is nothing like the metronome to effect this object. Especially in the practice of technical exercises may the metronome be employed as a balance-wheel and as an index to one's growth in expertness. Try, for instance, using it in the following scheme of scale practice:

1. Beginning in the lower register of the piano, play a given scale through one octave, one note to a beat.
2. Similarly, extend the scale to two octaves, playing two notes to a beat.
3. Increase to three octaves, with three notes to a beat.
4. Finally play through four octaves, four notes to a beat.

The scale should be played at least four times in each of the above ways. At first, set the metronome as low as ♩-88; a rate which may gradually be increased to ♩-144. All sorts of variants may be applied to this work, such as different degrees of force, different rhythmic figures, scales in thirds and sixths, in contrary motion, and so on. Arpeggios may be similarly treated.

Technical studies, such as those of Cramer and Czerny, are also profitably practiced with the metronome. But the danger of acquiring a mechanical style makes it advisable to use it sparingly with pieces, or wherever artistic interpretation is the prime object. Even here, however, it may be applied wherever there is a tendency to vacillate in time-values.

Studies and Fugues

Mrs L. D. L. asks for advice regarding the work of her pupils and of herself.

First, as to studies which may follow Kohler's *Practical Method, Op. 249* Of the technical type, I suggest Beren's *New School of Velocity, Op. 61,* of which the first two books are most useful. These may be followed by the *50 Selected Studies* of J. B. Cramer. More poetic and interpretative studies are those of Stephen Heller, Op. 47, followed by Op. 46.

It seems to me from your description that you are tackling too difficult music. If you find Liszt's *Etude in D flat* and Mendelssohn's *Prelude and Fugue in E Minor, Op. 35, No. 1* beyond your powers, work on simpler materials until you reach the required grade. Since your left hand is technically weak, give it some special drill in scales and arpeggios. Also practice diligently studies that exploit the left hand, such as Czerny's Op. 718—Twenty-four studies for left-hand development—and from Cramer's 50 Studies Nos. 4, 7, 16, 18, 31. Chopin's *Third Prelude, in G major,* is an admirable study for the left hand.

Finally, before working on the Mendelssohn Fugue, you should conquer at least representative Preludes and Fugues from Bach's *Well-tempered Clavichord.* I suggest the following examples from volume 1, which are here listed in progressive order:

Nos. 5, 2, 21, 1, 11, 6, 15, 17, 3, 4.

The Musical Scrap Book

Anything and Everything, as Long as it is Instructive and Interesting

Conducted by A. S. GARBETT

THE SPANISH MALAGUENA

Concerning that languid song of Malaga, the *Malaguena,* Arthur Symons, the poet and prose rhapsodist, has the following to say in his charming *Cities and Sea-Coasts and Islands.*

You cannot walk through a little town in the south of Spain without hearing a strange sound, between crying and chanting, which wanders out to you from behind barred windows and from among the tinkling bells of mules. The *Malaguena,* they call this kind of singing; but it has no more to do with Malaga than the mosque at Cordova has to do with the soil on which it stands. It is as Eastern as the music of tom-toms and gongs, and, like Eastern music, it is music before rhythm, music which comes down to us untouched by the invention of the modern scale, from an antiquity out of which plain-chant is a first step towards modern harmony. And this Moorish music is, like Moorish architecture, an arabesque. It avoids definite form just as the lines in stone avoid definite form, it has the same endlessness, motion without beginning or end, turning upon itself in a kind of infinitely varied monotony. The fioriture of the voice are like coils which spring from a central point of ornament to twist outward as in a particular piece of very delicate work in the first mihrab in the mosque at Cordova....The passion of this music is like no other passion; fierce, immoderate, sustained, it is like the crying of a wild beast in suffering, and it thrills one precisely because it seems to be so far from humanity, so inexplicable, so deeply rooted in the animal of which we are but one species."

BEGINNINGS OF "BORIS GODOUNOFF"

"Hardly had Mussorgsky finished working at 'Mlada' when Stassof proposed to him a new subject for musical drama," says M. D. Calvocoressi in his book, *Mussorgsky,* writing of the origin of the most famous opera that has yet come out of Russia. "'It seems to me,' the biography says, 'that the contrasting and clashing of the Old Russia with the New Russia, the passing of the former and the birth of the latter, afforded a rich subject.....He started on the work enthusiastically. To study the history of the Raskolniky sect of Ancient Russia (The Old Believers), and all the general chronicles of the 17th century, was an enormous task. The numerous and lengthy letters which he wrote me at that time are full of details of these studies, of discussions on the composition of the opera, of the characters and the scenes. The best parts of the work were written between 1872 to 1875'

"In February, 1873, three excerpts from Boris Godounoff were given at the Maria Theater (for the benefit of the manager, K. Kondratieff), the inn-scene, the Boudoir of Marina Minishek, and the scene at the Fountain......

"Some months later, the rehearsals of 'Boris Godounoff' were commenced at the theater, and on January 24th, 1874, the first public representation took place.

"It was the greatest triumph of Mussorgsky's whole life."

"There is no doubt as to the completeness of the success which Mussorgsky scored at the performance of 'Boris Godounoff.' The younger generation entirely recognized its deep significance, the great originality of the work; and they were accordingly full of enthusiasm. Twenty consecutive performances took place, always to full houses. Late at night, groups of young men were heard singing the choruses along the streets and on the Neva Bridge."

Great minds are the lighthouses of humanity.

THE NEGRO SPIRITUAL

In a vividly written, comprehensive little article entitled "Jazz; A Brief Outline," appearing in *Vanity Fair,* Mr. Samuel Chotzinoff traces the origin of jazz to the Negro spirituals, which, he says "are in their way comparable to the folk-tune of any European nation. They are the musical expression of a great group of American peasants, who became identified with the native soil through a century of compulsory labor upon it....

"The negro spiritual has two characteristics: one, an insistent and lively two-four rhythm which, being started, is carried along by the momentum of its start. This almost living beat is the base for every kind of sentiment the negro slave felt and expressed.... It is this relentless pushing onward of the music that carries swiftly over sentimentalities and strengthens extravagant ecstacies. His confused reaction to a complex and alien religion is borne with pathetic dignity on the stream of this throbbing mingling of time and sound.

"The other characteristic of this music, of course an outgrowth of the first, is its physical effect on the listener. In the negroes themselves it produced a sort of rhapsodical epilepsy of which the lingering effects may be observed in street-corner negro revivalists, and indeed in the antics of our own Billy Sunday who not unwisely adopted the negro idea. The effect of this rhythm on the white race is not less marked, though less extravagantly so. There is an irresistible inclination to bodily time-marking: a lifting of shoulders, a rolling of eyes, a swaying of the head (the latter a conspicuous feature, I believe, of what is known as 'collegiate' dancing). There is an inevitable longing to let this extraordinary rhythmic force take possession of one's body and work its will—like the devils that were believed to enter the bodies of sinners in mediæval or Puritan times. The reaction to this rhythm is universal and as compelling as a natural force."

In conclusion Mr. Chotzinoff thinks that "The negro genius has been responsible for whatever musical development America can boast. It is that genius which has produced the American jazz, the only distinct and original idiom we have. It and not the music of MacDowell and Foster, and a host of imitators of the German and French, is the musical speech of this country."

Some of us may agree to this only with wide reservation, but the point of view is interesting nonetheless.

MOZART GIVES A PARTY

"Of all amusements, Mozart was fondest of dancing, and found in Vienna ample opportunity for indulging his passion, where dancing was at that time an absolute rage," says Otto Jahn, in his *Life of Mozart.* "His wife confided to Kelly, who saw Mozart dance on the occasion of their first meeting, that her husband was an enthusiastic dancer and thought more of his performances in that line than in music. He was said to dance the minuet very beautifully. His letters have many indications of this partiality, and he gives his father a merry and complacent account of a ball at his own house (January 22, 1783):—

"'Last week I gave a ball at my own house, but, of course, the gentlemen paid two florins each. We began at six o'clock in the evening and left off at seven. What, only one hour? No, no; seven o'clock in the morning! You will scarcely believe that I could find room for it.'

"He had lately moved, and had taken apartments with Herr von Wezlar, a rich Jew. 'There I have a room a thousand paces long, and a bedroom, then an anteroom, and then a fine large kitchen; there are two fine large rooms next to ours, which stand empty at present and these I made use of for the ball.'"

Apparently conditions in Vienna, 1783, were not very different from what they are in New York, 1924, except that not many modern dancing enthusiasts of Mozart's financial status can boast an apartment a thousand paces long, let alone a "fine large kitchen." Mozart to-day would be lucky to get a mere "anteroom" in the largest and richest city in the world. Happy Mozart!

PADEREWSKI AS A PUPIL

"The musicians of Vienna had hailed with joy the founding of the *Tonkünstlerverein,* which gave an opportunity of hearing not only the best products of their fellow-townsmen, but also those of foreigners, who, when possible, were always invited to take part, says the Comtesse Angèle Potocka in her biography of Leschetizky, who was, of course, Paderewski's teacher. "I remember the night that Leschetizky brought out his brilliant pupil, Ignace Paderewski. His performance of an original theme and variations was not greeted with special favor. Indeed, some local musicians were heard to remark that the 'young man did not seem to promise much.' But his keener master opposed envious criticism with the now unanswerable statement, 'Ah, my dear ———, you will have to get used to hearing that young man's name.' Yet, as he stood nonchalantly in the passageway, his tawny head resting against the wall, those who foresaw his great future were probably few.

"He came to Vienna to study with Leschetizky in 1885. Of all his pupils the master claims that Paderewski was most docile. There was no remark so insignificant, no detail so small, as to reserve less than his whole passionate attention. In his two modest rooms in No. 46 Anastasias Grungasse (rooms which, for motives of sentiment, he retains on a life-lease), with a slender wardrobe and scanty comforts, he patiently laid the foundation of his brilliant career."

THE INDIAN MEDICINE-MAN AND MUSIC

There is no greater living authority on the music of the American Indian than Miss Frances Densmore. In an article appearing in *Hygeia* (Chicago) she tells us something of Indian methods of employing music in the cure of disease.

"The Indian medicine-man treats physical as well as mental or nervous disorders with the aid of music, but there is no appeal to the emotions in his method. Instead, it appears to be based upon the actual power of rhythm. For about fifteen years I have been associating with the old medicine-men of several tribes, in connection with my study of the music of the Indians for the Bureau of American Ethnology of the Smithsonian Institute at Washington.

"Some of the medicine-men of the various tribes administer herbs and say that they sing in order to make the herb effective. Others sing without using material remedies. I have recorded phonographically more than one hundred songs used by Indian medicine-men and women when treating the sick, with descriptions of their methods of treatment. Sometimes a medicine-man uses affirmation as part of his method. Thus, a Chippewa medicine-song contains the words, 'You will recover, you will walk again. It is I who say it. My power is great.' This was sung for a person unable to walk. A Yuma medicine-man said, 'After singing my fourth song, I always ask the patient if he feels better. The sick man has always said that he felt better.'

"The Sioux medicine-men have songs for various ailments—a song to be sung when adjusting a fractured bone, a song for headache, and a song for diseases of children. The Papago of Arizona have special songs for every imaginable ailment and, like the northern Indians, they believe that healing songs are given them by certain birds and animals. There is nothing in the words of these songs to arouse any associations in the mind of the patient.... The song is usually sung four times, then follows a pause, after which the song is sung again four times."

MUSICAL EPIGRAMS AND APHORISMS

A recent issue of Schirmer's Musical *Quarterly* contained some interesting "Thoughts and Reflections Anent Music and Musicians" collected by J. G. Prod'homme, from which we select the following:

"The language of music is infinite: it contains all; it is able to express all."—*Balzac.*

* * *

"Tone is light in another form; both move through vibrations which end in man, and which he in his nerve-centers transforms into thought."—*Balzac.*

* * *

"Music is the vapor of art. It is to poetry that which revery is to thought, that which the fluid is to the liquid, that which the ocean of the clouds is to the ocean of the waves."—*Victor Hugo.*

* * *

"I loved music till the age of thirty—a veritable young man's passion. I loved her as long as she was my mistress; but since then she has become my wife."—*Auber.*

* * *

"Those only make light of difficulties who are unable to overcome them. Virtuosity triumphs in all the arts, in literature, and above all in poetry; in music we owe to virtuosity all the marvelous effects of modern instrumentation, which have become possible since it has penetrated into the orchestra."—*Saint-Saëns.*

An effective modern *song without words.*
To be played in the singing style. Grade 4.

Music Teachers Demanding Legitimate Discounts

In practically all of the professions and crafts, discounts upon the purchase of professional materials of all kinds are given gladly by publishers and manufacturers.

The custom of giving such discounts is **centuries old** and has long since been justified by usage.

We contend that **the music teacher, of all workers,** is entitled to a liberal discount.

A number of publishers have informed us that they propose literally to wipe out discounts to the music teacher entirely.

We sent an extensive questionnaire to teachers in all parts of the country and found that, although they are most enthusiastic over the mail order service received from the Theodore Presser Company, they were nevertheless **depending upon the discounts** they were receiving to reimburse them in some small measure for the great outlay in money, time, postage, stationery, car fare, etc., that the individual teacher is obliged to spend in selecting and purchasing new music.

The former fictitious discount, at which any retail purchaser (whether professional or not) could purchase music, has been discontinued at the recommendation of the Federal Trade Commission. **We endorse this heartily.**

The music teachers' discount (restricted to music teachers **only**) **is an entirely different thing.** It is established by universal precedent in nearly all professions and callings.

We shall not withdraw this special discount to teachers. The doctor, the lawyer, the dentist, the public school teacher and the scientist are all given liberal discounts. Why not the music teacher, where the income is often much smaller?

We believe in supporting the local dealer and advise our readers to patronize the local dealer when his stock and service entitle him to their custom. **He is an asset in the community** and may be a valued friend in need.

There are, however, vast numbers of music teachers who have **no music dealer near to them.** They are entirely dependent upon **"Mail Order"** and **"On Sale"** systems of purchase.

We believe most emphatically that **such teachers should demand a just discount,** not as a favor, but as a right to recompense them for the trouble and time and money they spend in selecting music.

The publishers who refuse to give such a discount either do not understand the teachers' side of the question or they are placing their own interests above **those very educators who make it possible for the publisher to continue in business.**

Teachers buy music and supplies **not for their own use,** but for re-sale to others. It is the custom of all businesses to grant a compensation discount to all such purchasers.

The Theodore Presser Company will combat energetically all attempts to rob the teacher of his **rightful discounts.** It will support all publishers following the same policy. It is confident that it has **the enthusiastic backing of the teachers** of the country in this decision and that the teachers will demand their rights in this matter.

Music teachers are not fools or weaklings. They have a commonsense knowledge of the situation and they know that it is possible for the publishers to grant them a just discount and at the same time, make a secure profit. They also know that the matter of securing discounts is regarded as very vital in all businesses, that thousands and thousands of business houses virtually owe their success to the proper management of discounts.

The successful teacher of the future will inevitably direct his purchases toward the houses recognizing his rights and fighting for them.

The Singer's Etude

Edited by Noted Teachers and Singers

It is the Ambition of THE ETUDE to Make This Voice Department "A Vocalist's Magazine Complete in Itself"

Recipes for High Notes

By Charles Tamme

To give pleasure with high notes, the singer must enjoy singing them; and the more he enjoys singing them; the greater will be the pleasure of the audience. In other words, there must be mutual confidence as well as mutual pleasure for successful high notes.

Confidence and pleasure must emanate from the artist. But how? There is only one answer. The artist must feel confidence and pleasure in his high notes in order to emit these sensations. If he does not, he will be nervous and worried, and this state of mind, instead of a pleasurable one, will be communicated to the audience, who in turn will lose their confidence in the singer unable to place confidence in himself; and such an audience will not be in a frame of mind for enjoying high notes.

Freedom in High Notes

The surest basis for self-confidence in the matter of high notes is to gain perfect freedom in singing them. They must be sung spontaneously, easily, with ringing clarity. They must sound, too, as though there were higher notes in reserve, and not as though they had taxed the singer's limit of range and volume. There should be no facial contortions and no apparent physical exertion.

Various exercises and instructions for the free execution of high notes are known in the vocal profession. Some singers would do well to practice them all, whereas others need only some or one of them. There are a few fortunate singers who have never experienced any trouble with their high notes.

Rapid Practice

High notes are best and most quickly acquired through daily practice of rapid passages like the arpeggio in its various forms, maintaining the vowel sound in its true quality throughout. There is less strain on the vocal organ in rapid passages than in sustained ones. After the voice has become flexible, then proceed to strengthen it by giving a hold on the upper note of the arpeggio, gradually increasing this as the voice grows stronger, and always listening that you are maintaining the true vowel quality. A high note should never be sustained longer than the ability to maintain a nicety of balance.

Many singers fall into the error of placing so much stress in the middle voice that when they come to high notes they have no energy left for them. High notes require more vitality than low or middle notes—this because the vocal chords become shorter in the ascent of the scale, causing greater natural tension, which in turn requires a balancing of the breath pressure throughout the entire vocal mechanism.

Excessive Breath Pressure

When excessive breath pressure is used in the middle voice, a corresponding tenseness results in and around the larynx; and this tenseness, coupled with the natural tension required in the ascent of the scale, often brings about such tightness that high notes become impossible. Watch the middle notes, then, if you would be successful of the high ones.

The singer, then, must gain a balance of energy, breath pressure and tension. He must depend upon resonance for volume before he can enjoy singing his high notes. The mental attitude, too, has much to do with the singing of high notes. Fear and uneasiness will invariably impair their quality, for the reason that these sensations will be requiring attention that should be directed to singing. Spontaneity, happiness, attention, particularly to the meaning of the words—these will help make high notes come easily and freely.

Very few singers have their high notes naturally. The problem must be faced frankly in order that it may be overcome. This will never be while the singer dodges the issue by singing songs in a lower key or by singing different words than those which are written.

A singer does himself injustice and often harm by singing songs in a key which is too low for his real range, merely to avoid the trouble of mastering the high notes in it. Instead, he should intelligently analyze the difficulty in each particular song, and work out the correction persistently.

The wise thing, usually, is to make a point of choosing the higher or the highest note where a choice is given. Avoiding a problem never solves it.

After the arpeggios have been practiced intelligently, and conscious freedom of the entire vocal mechanism has been persisted in, and still the high notes are not dependable, try dropping the larynx. Ordinarily, dropping the larynx makes for darkness and richness in tone color; but sometimes, in ascending the scale, the larynx is unduly raised, and dropping it slightly will get it into a more normal position and permit a freer exit of the high notes without darkening the tone quality.

Another excellent plan is to practice high notes before the mirror, seeing to it that the tongue is free from tenseness.

Making a strong effort to articulate consonants improves high notes; never slight them.

Another good rule is: Never interfere with the pitch mechanism. Direct the attention to the purity of the vowel sound.

At all events, face the problem of high notes with a determination to master it. After analyzing your own particular difficulty, formulate some remedy and work upon this basis. Is your difficulty mechanical or physical; or is it both? Attention is an excellent guide in this matter. Intelligent work will prove a dependable friend.

The Soft Palate in Song

By L. O. Huey

There are two ways of treating the soft palate in writing on "How to Sing." One, quite popular, is to forget it—not mention it at all. The other is to "raise the soft palate by inhaling deeply" before phonation begins. Our prominent singers defend this latter action on the ground that it prevents nasal quality. Others advise it because it helps to "open the throat," thus permitting a greater volume of tone.

Nasal Quality

If "nasal quality" is destructive of a fine singing tone, and if volume is the most important consideration in starting the voice, then we might admit the above doctrine to be sound. But, inasmuch as correct nasal quality is not only the salvation but also the foundation of the middle voice, and inasmuch as volume is not of paramount importance in starting voice study, we do, therefore, submit the above doctrine to be both false and pernicious, regardless of sex. Shakespeare disposes of the soft palate by defining its action as purely automatic. After one has reached a certain stage—yes. "Raise the soft palate by inhaling deeply, thus insuring an open throat." We would advise all who have an open throat, obtained and maintained in this way, by all means to insure it.

Many would have us believe the sole object of vocal training lies in continually concentrating on the production of a fine singing tone. This is a great, often fatal, mistake. The vocal organ of each individual is the sole dictator of the policy to be followed in its development. Under no circumstances does this policy, when understood, demand or permit a continuous attempt to produce fine tone.

Two Great Protectors

The two greatest protectors of the vocal instrument and voice are the soft palate and the tongue. In nearly all cases injury to voice is directly traceable to interference with one or the other, or both. The most destructive vibrations are produced by applying force when the soft palate is raised and the back tongue lowered, especially before the instrument is seasoned and adjusted. The most beneficial vibrations are produced with the soft palate and tongue in normal repose. These are the vibrations that build the instrument, and, eventually, the voice. An elongated uvula is, as we all know, detrimental to vocal development. When it exists, this defect should be remedied at once.

During the first few years of vocal study, you are not building a voice so much as you are building or preparing a "sounding board" for your tones. The whole body is the sounding board; and your character, your personality, your general and musical culture go into this sounding board also.

What Singers Say

"I do not believe that a girl's vocal education should commence earlier than at the age of sixteen. The girl who is of the right sort will lose nothing by waiting until she reaches this age."

—Marcella Sembrich.

"Correct breathing is the greatest health-giving force in the world."

—Frieda Hempel.

"Be big—that is the secret. And how? Live a big life, and love greatly."

—Galli-Curci.

For the Stammering Pupil

By Lewis Each

Occasionally one finds a pupil who seems never to be able to eliminate all false notes, even in the most simple form of composition. Wrong note playing can easily be cured if it always occurs at the same place; but it is most distressing to get one passage straightened out only to have some other go wrong.

The trouble is at some point in the playing mechanism between the printed page and the keyboard. Either the eye does not register, in a positive manner, the correct notes in the mind or the impulse from the mind to the finger tip is incorrect or not positive enough.

To discover which of these causes is the source of the trouble, the pupil should speak the letter names of a passage in single notes aloud and in the correct rhythm or as nearly so as possible. If he is not able to read the notes readily and correctly it is the first cause which must be overcome. He should then read the notes aloud or silently and at the same time give impulse to the fingers on the keyboard. If wrong notes accompany correct reading the second cause is the fault.

To cure this disease of stumbling and stammering, which is quite often pure carelessness, the following treatment is very effective.

The pupil should read the passage aloud ten times (ten for convenience) with all the time he needs for thinking and speaking, gradually adjusting the rhythm if possible. Each correct reading counts ten toward one hundred per cent reading, the wrong ones, of course, counting off ten per cent. Thus he is made to see his efficiency or inefficiency in per cents as he is in school.

The same plan is carried out for getting notes through the eye and mind and to the finger tips.

By having the pupil do this each day at his practice period and to bring in a report of his results some most hopeless cases of carelessness and stammering have been overcome in two weeks.

Staccato Is of Great Importance in Singing

By Charles Tamme

In addition to its beauty as a vocal embellishment, staccato holds a place of high importance in the development of the vocal artist.

Occasionally there is a singer who naturally sings a perfect staccato; but this faculty is rare. Most singers must practice for staccato and practice intelligently.

But it is practice well worth while. Staccato is excellent for the low as well as for the high voice. A good staccato indicates many things. It indicates a perfect attack, control of the breath, excellent manipulation of the vowel sound, purity of tone, exactness of pitch, and a voice that is agile. A good singer hardly needs many more accomplishments than these.

And yet not many professional vocalists are able to sing staccato. What imputation is their public to make from this fact?

When analyzed for what it is, fundamentally, staccato is not a feat of great difficulty. Many teachers are content with calling staccato a 'stroke of the glottis;' and staccato is this, to be sure. But 'stroke of the glottis' is, psychologically speaking, a very poor definition. In the first place, it calls a singer's attention to his throat and to his pitch mechanism, over which he has no direct control, thus only making him unduly sensitive. In the second place, the phrase, 'stroke of the glottis' has deteriorated, since the days of Garcia, into meaning an undesirable effort on the part of the singer—a pushing or forcing in his attack.

Let us then, look for another definition of staccato. Grove's Musical Dictionary says staccato is 'an impulse from the throat on an open vowel sound, instantly checked.' As a definition this is descriptive and complete; but for directions to the singer it might be well to emphasize the importance of placing most of the stress of action on the vowel sound. The singer should give his full attention to the singing of the *vowel sound.* This he must sing short, which will, of course, make the pitch sound short.

The difficulty with most singers in their staccato is that while doing it they cease to be singers and become instrumentalists. They attempt to control the vocal chords in the throat just as a violinist picks at his violin strings for sounds. And 'attempt' is all the singer is able to do, for he has no direct control over his pitch mechanism.

However well a singer has learned that in ordinary singing he must look to his words and to the vowels and consonants in his words, without undue attention to pitch; just as when he talks he is not unduly conscious of pitch; when singing staccato the knowledge does not seem to stand by him. This is unfortunate for he needs it as much as ever.

To sing staccato successfully, the singer must give his attention to the purity of the vowel sound. The staccato note consists, like any other note, of vowel plus resonance on pitch. The vowel is the important thing always, in singing staccato.

Begin practicing staccato on *Ah,* using the five note scale. Do it lightly and slowly at first; do it softly on the low notes with a gently increased energy and a crescendo when ascending. Be sure to maintain the true vowel sound throughout the entire scale. Take a breath after each note through the mouth which you must be careful to keep wide open; the amount of breath has got to be nicely adjusted for there is danger of taking too much breath, thus making the notes rigid, heavy and breathy. Too little breath, on the other hand, will not give sufficient impetus and energy to your notes.

The point about singing staccato is to sing the notes short, of course; but you must never get so interested in getting the notes short as to forget to sing a pure, round vowel sound on every note, with its full share of resonance, just as you do when singing legato. Indeed, a beautiful quality is the all-important factor of every note, whether legato or staccato; the shortness of the staccato being, after all, merely a negative characteristic.

Practice staccato very slowly at first, gradually increasing in speed and smoothness so that the staccato scales are executed as freely and as easily as the legato ones.

Staccato should first be practiced on *Ah,* and when it is sung easily on this one, it should be practiced on all the other vowels.

The beginner as well as the advanced artist does well to practice staccato. While it is not too difficult for the beginner, staccato has never been beneath the efforts of the greatest of singers.

Teaching the Messa Di Voce

By Charles Tamme

Few public singers attempt the *messa di voce.* For this reason many vocal teachers argue, and not without some justice on their side, that it is poor policy to discourage pupils by insisting on the accomplishment of this very difficult bit of vocal technic. The public does not demand it, they argue, otherwise they would not support singers who do not even make an attempt in this direction. And vocal students argue much the same way.

The *messa di voce* is a combination of *crescendo* and *diminuendo,* usually indicated for application to a single note, but it can be used with great effectiveness throughout an entire phrase. In fact, in its broader sense, it is used from the beginning to the end of songs—in certain types especially.

Now the value of the *messa di voce* does not end with its direct application to the singing of songs—the producing often of art from out of a chaos of mere notes—important as this may be. The *messa di voce is* the finest exercise in the whole gamut of vocal technic for developing direct control of the breath.

All the breathing exercises in the world will never accomplish for breath control what five minutes a day of the *messa di voce* will do. Indeed, it is very doubtful whether breathing exercises by themselves are not a waste of time, anyhow, as far as singing is concerned certainly they will never bring about a *messa di voce.*

If the *messa di voce* is taught properly, from the very beginning, the teaching as well as the learning will become very much less difficult than it usually is. But there never must be an attempt to teach *messa di voce* until the pupil has learned how to maintain a true vowel sound and a continued flow of resonance. This groundwork is an essential preparation for taking up the *messa di voce;* without it, the usual result is that the throat becomes rigid in its effort, and the pupil cannot be blamed for giving up in despair in a short time, for the rigidity blocks further progress in working out details. The teacher may still insist on requiring his pupil to practice for the accomplishment of the *messa di voce,* but he, too, will ultimately give up in despair, for there can be no progress or improvement until the pupil has mastered the important groundwork. There is no question but that the breath plays a very important part in the singing of this grace; and the efficiency of the part it plays depends upon the manner in which the breath is inhaled and also upon the breath capacity. More consideration should be given to the manner of inhalation than to the manner of exhalation. The abdominal walls should be well expanded after the breath intake from the downward push of the diaphragm. If there is plenty of time, the air may be inhaled through the nostrils, but it is usually taken to better advantage in large quantities through the mouth. Exhalation will take care of itself, for it is best controlled by the act of singing and one should not attempt direct control of it. This is true with all singing, but it is the *messa di voce* which most rapidly develops the control of the exhaled breath.

There are various methods of procedure in teaching the *messa di voce,* the most efficient and successful way is to recommend the pupil's starting with *forte* and diminishing to piano. *This* is really a study of the *diminuendo.* When this can be accomplished on every note within the pupil's range, with a fair amount of smoothness, reverses the order, but as a continuation of the same exercise. That is, start with *forte,* diminish to *piano,* and on the same breath return to *forte.*

Right here, take warning. Never allow the pupil to attempt to execute extreme softness or extreme loudness in the beginning, for the result is sure failure. The extremes can be gained only through patient and constant daily practice. The *messa di voce* grows from day to day, week to week, month to month, year to year. There is nothing spectacular or sudden in its accomplishment like the gaining sometimes, of high notes, or resonant tones or perfect staccato. Therefore it is not

Look Inside the Piano for this Trade-Mark

The Sign of the World's Standard Piano Action

The Most Important of *Any* Piano

SIZE, style and finish influence one's selection of a piano but every music lover should make the piano action the *determining factor* in a piano purchase. The action is the heart of the piano—the wonderful mechanism governing touch and controlling tone.

There is every reason why you should insist upon the Wessell, Nickel & Gross action—*the world's highest priced piano action*—in *your* piano. This famous action has been the choice of leading American piano makers since 1874. It is a real assurance of piano *quality* for it is never found in pianos of doubtful worth. It is built by the oldest, largest and leading makers of high-grade piano actions.

You make the most desirable piano purchase when you are careful to see that the instrument is Wessell, Nickel & Gross equipped.

WESSELL, NICKEL & GROSS
Established 1874 New York City

When you Buy an Upright, Grand, Player or Reproducing Piano—Insist on the Wessell, Nickel & Gross Piano Action.

good policy to push a pupil too strenuously for this accomplishment. Patience will build it up in good time, while the rest of the vocal technic is making progress and the voice is developing. Prescribe five minutes of practice a day, regularly for this study; and give it five or ten minutes' attention at each lesson. Never drive.

After the pupil has thoroughly learned to begin with a *forte,* diminish to *piano,* then *crescendo* back to *forte,* he may change the order. Let him begin with *piano, crescendo* to *forte,* and again diminish to *piano,* this being the true *messa di voce.* When he has gained perfect control from *piano* to *forte,* and back to *piano* again, he is ready for the extremes.

Throughout his practicing, have the pupil to be sure he is giving his attention to the starting of every tone in resonance and ending it in resonance. The timbre of the voice, in other words, should remain the same throughout a *messa di voce.* Color should never be allowed to overburden the vowels; the vowels themselves should infallibly predominate. Indeed, *messa di voce* is never pleasant or desirable unless the vowel sound is well understood.

As a part of vocal technic, and even if it is never attempted in public, the *messa di voce* is indispensable, as we have seen. Left out of songs where its use is indicated, there is a great void which cannot be filled by substitution. Its effect is to be seen in the light and shade of singing. It assists in the use of nuance and the many subtle changes which bespeak the true artist. What magnitude of love, what poignance of grief, what height and depth of all the emotions can be expressed by its tasteful and the masterful use!

Insist, then, upon your pupils learning this important part of vocal technic—gently, gradually, if necessary, and yet with a determination that admits of no failure. Once having mastered it, every singer is eternally grateful.

The Real Delilah of Saint-Saëns

In a book of *Outspoken Essays on Music,* Camille Saint-Saëns included some "Observations of a Friend of Animals," in which he describes a little lady-dog of his who was named after the heroine of his best known opera, *Sampson and Delilah:* "May I be allowed to say a few words about Delilah, a black griffon with dark blue eyes which for ten years has been the delightful companion of my solitary old age . . . ."

He tells some charming stories of this animal whose "greatest pleasure was to leap on to a table; she could walk about like a cat and never upset a single one of the fragile ornaments with which it was covered.

"On hearing a piano being played she uttered the most piercing cries. Whether she liked or detested it I do not know, for she came running up as soon as the music began instead of running away, though she raised such a series of howls that she had to be carried to the other end of the building as speedily as possible. Neither singing nor the playing of other instruments ever excited her to the same degree.

"On the other hand, I once knew a dog which adored the piano; as soon as the music began he would come up and crouch beneath the pedals: a matter troublesome enough for the player. To rid oneself of him, all that was necessary was to play Chopin's music. Before eight bars had been played he had left the room, with dejected ears and his tail between his legs. However often the experiment was tried, the result was always the same. Delilah knew the sound of the Eifel Tower gun. When it boomed forth she would make her way to the kitchen for lunch."

When Handel Went Blind

Every one knows that Handel, like Bach, lost his sight toward the end; but few know that his last moments of vision were spent upon one of the noblest of his works. Thus graphically Romaine Rolland describes the event in his new book of essays, *A Musical Tour:* "But nothing approaches in moral grandeur the chorus that closes the second act of *Jephtha.* Nothing enables us better than the story of this composition to gain an insight into Handel's heroic faith.

"When he began to write it, on the 21st of January, 1751, he was in perfect health despite his sixty-six years. He composed the first act in twelve days, working without intermission. There is no trace of care to be found in it. Never had his mind been freer; it was almost indifferent to the subject under treatment. In the course of the second act his sight became suddenly clouded. The writing, so clear at the beginning, is now confused and tremulous. The music, too, assumes a mournful character. He had just begun the final chorus of Act 2; *How Mysterious, O Lord, Are Thy Ways!* Hardly had he written the initial movement, a largo with pathetic modulations, when he was forced to stop. He has noted at the foot of the page:

"'Have got so far, Wednesday, 13th of February. Prevented from contg. because of my left eye.'

"He breaks off for ten days. On the eleventh he writes on his ms.: 'The 23rd of February, am a little better. Resumed work.'

"And he sets to music these words which contain a tragic allusion to his own misfortune:

"'*Our joy is lost in grief....as day is lost in night.*'

"Laboriously, in five days' time—five days!—and formerly he could have written a whole act in that time—he struggled on to the end of this sombre chorus, which illumines, in the darkness that envelops him, one of the grandest affirmations of faith in time of suffering. On emerging from these gloomy and tormented passages, a few voices (tenor and bass) in unison murmur very softly

"'*All that is.....*'

"For a moment they hesitate, seeming to take breath, and then all the voices together affirm with unshakable conviction that all that is

"'*.....is good.*'

"The heroism of Handel and his fearless music, which breathes of courage, of faith, is summed up in the cry of this dying Hercules."

The Etude has arranged with a group of the most distinguished present day teachers of voice to present the latest opinion upon all phases of vocal culture in coming issues. Our *Voice Department* will be unusually strong this year.

A Special Bargain!
EVERYBODY'S SONG BOOK
A Treasury of Favorite VOCAL MUSIC

This book is a great value for every home possessing a piano. With a collection such as this around, many an evening can be made delightful, parties can be enlivened or one can enjoy pleasantly a little diversion at the piano; contains 74 old favorite home songs, 147 beloved sentimental songs, 57 operatic songs, 25 sacred songs, 72 hymns, 59 pretty little children's songs, 27 southern songs, 34 college songs, 13 sea songs, 6 delightful rounds, 37 patriotic songs and 33 national and folk songs.

When Music Publishing Was a Monopoly

By Will H. Mayes

WHILE the Company of Stationers was granted a charter on May 4th, 1556, giving them the exclusive privilege to exercise "the art or mystery of printing or stamping any book or anything to be sold" in England of that character, it is evident that the Crown did not have in mind the printing of music when that charter was granted, for on January 22d, 1574, a monopoly of music printing was granted to Thomas Tallis and William Birde for the period of twenty-one years. Tallis and Birde were members of the stationers' company, and this privilege was evidently granted them as a special favor on the part of Queen Elizabeth. An excerpt from the grant is here given, showing the extensive privileges enjoyed by the first music printers of England of whom we have any record.

"Elisabeth by the grace of God, quene of Englande, Fraunce, and Ireland, defender of the faith, &c. To all printers, bokefellers, and other officers, minifters, and fubjects, greting. Know ye, that we for the efpeciall effection, and good will, that we haue and beare to the fcience of Mufick, and for the aduancement thereof, by our letters patents, **dated** the XXII of January, in the XVII yere of our raigne, have graunted full priviledge and licence vnto our welbeloued feruantes, Thomas Tallis, and William Birde, gent. of our chappell, and to the ouerlyuer of them, and to the affignes of them, and of the furuiuer of them, for XXI yeares next enfuing, to imprint any, and fo many, as they will, of fet fonge, or fonges in partes, either in Englifh, Latine, French, Italian, or other tangues, that may ferue for mufícke, either in churche or chamber, or otherwife to be either plaid, or foonge. And that they may rule, and caufe to be ruled, by impreffion any paper to ferue for printing, or pricking, of any fonge or fonges, and may fell and vtter any printed bokes, or papers of any fonge, or fonges, or any bookes, or quieres of fuch ruled paper imprinted. Alfo we ftraightly by the fame forbid all printers, bookefellers, fubiects, and ftrangers, other then as is aforefaid, to do any the premiffes, or to bring, or caufe to be brought, of any forren realmes into any our dominions, any fonge, or fonges, made and printed in any forren countrie, to fell, or put to fale, vppon paine of our high difpleafure; and the offender in any of the premiffes, for euery time to forfet to vs, our heires, and fucceffors, fortie fhillings, and to the faid Thomas Tallis, and William Birde, or to their affignes, and to the affignes of the furuiuer of them, all, and euery the faid bokes, papers, fonge, or fonges. We haue alfo by the fame willed and commaunded our printers, maifters, and wardens of the mifterie of ftacioners, to affift the faid Thomas Tallis, and William Birde, and their affignes, for the dewe executing of the premiffes."

Woman Who Inspired "Silver Threads" Dies in Poverty

HARRIET DANKS died in poverty on March 19, in a rooming house in Brooklyn. She was the widow of Hart Pease Danks, who, in 1874, composed "Silver Threads Among the Gold," to the poem by Eben E. Rexford. Contrary to the optimistic note of the song, soon after its composition the composer and his wife quarreled and separated, and Danks died alone in Philadelphia in 1903. By his will his widow was entitled to only one-third of his estate, consisting mainly of the royalties on more than a thousand songs; but, feeling that the whole of it should have been left to her, she became estranged from her children. The quarrel descended to the second generation, and Gertrude Danks, bringing suit against her brother, Albert Danks, for an accounting of the royalties, caused his arrest at the cemetery gate as he was coming from his mother's funeral. Thus the song, which is redolent of contentment and love, has been the cause of sorrow and strife to all those related to the composer.

Music in Post-War Germany

DESCRIBING conditions in the Germany of to-day for readers of *The Atlantic Monthly,* Elsa Simm reminds us of the extreme poverty of the professional classes who formerly were the main support of musical and operatic ventures.

"Concerts and theaters have become very rare treats," she says. "Prices are a thousand-fold higher, but sometimes you cannot resist buying a ticket to a beloved opera, and you remodel your 1914 evening dress, but little worn, and go early. Around you are handsome dresses and jewels. Can this be poor Germany? Soon you discover that the smart girls with bushy bobbed hair are Americans. You hear Swedish and Dutch in the boxes, and there are several Italians in gay attire. But here also are Germans, richly dressed and unfamiliar to you. Between the acts you walk through the foyer looking for friends. At last someone approaches whom you surely know. It is—yes, surely it is the coal dealer's wife in this elegant dress; when you last courted her for a little coal she wore a woolen shawl.

"You look in vain for Herr A, the painter who, in the old days, never missed one of Mozart's operas. He and his wife have disappeared. The wave lifts one and swallows another. Writers, doctors, painters and musicians slave somewhere in the dark for their existence."

A Hint on Using the Metronome

By N. G. Abbott

SOME students so dislike to use the metronome that they simply do not use it. Thus they deprive themselves of an opportunity to do some real, earnest study that makes for advancement.

I have found that by placing the objectionable machine on the floor at my feet I am not distracted by the motion of the arm of the metronome and am not tempted to look at the instrument. This, though of seeming unimportance, has, in actual practice, helped me a great deal. In using the metronome I first determine the tempo at which I wish to practice the piece and set the metronome accordingly. Then I place it on the floor and, looking at the music, count with the metronome until I have the rhythm securely in my mind. When I *do* begin to play I usually find that I have adjusted myself to the metronome and do not have any cause to wish that the metronome would adjust itself to me.

The
Premier Aristocrat Model
Price, $725

This 5 foot, 3 inch thoroughbred small grand which is so prominent a feature of leading studios and conservatories, is described in detail in "The Magic of Music"—our attractive art brochure which will be sent to any applicant upon request.

"The Magic of Music" embodies many interesting facts regarding America's Foremost Popular Priced Small Grand and the remarkable institution behind it.

Every teacher, student, music lover, studio and conservatory should send for this reference book at once.

If you cannot obtain the Premier at your Dealer's—please inform us. *See* and *hear* this instrument before selecting *any* piano.

Teachers—let me give you a regular 30c size tube of Kondon's— JHKenyon

✓ We want school teachers to know and value Kondon's and to advise this healthy habit to their boys and girls. 3100 teachers accepted this offer last season

✓ Keep nose and head clear with Kondon's. It prevents infection, colds and catarrh. Just as important as cleaning the teeth.

✓ Send the names of 20 or more parents of your pupils. We will send you, not a sample, but a regular size 30c tube of Kondon's.

✓ Clip this ad. Mail it at once with the 20 or more names and addresses to Kondon Mfg. Co. Minneapolis, Minn.

Take these four steps for pupils' health

The Organist's Etude

It is the Ambition of THE ETUDE to make this Organ Department "An Organist's Magazine Complete in Itself"

Edited for November by HENRY S. FRY
Former President of the National Association of Organists

Some Fundamentals in Organ Playing

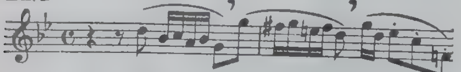
By H. S. Fry

THE most important fundamental in organ-playing is a pure legato touch for both manuals and pedals. Lest some of our friends raise their hands in horror at this statement, let us hasten to say that organ touch is by no means limited to the pure legato; but this is the important foundation on which organ touch is based, and is used more consistently than any of the other touches. Uninteresting, dull and dreary indeed, would be the organ-playing limited to pure legato; but that does not detract from its importance, and its frequent use serves to make touches such as Non-Legato, Staccato, Brillante, and Marcato the more effective by contrast. In the pure legato touch attack and release are of equal importance, as the attack of the note to be played must come at the instant of the release of the note being played. All other organ touches are governed by release, the quality of the touch being decided by the amount of cessation of tone between the released note and the note attacked. According to Dr. A. Eaglefield Hull in "Organ-playing—Its Technique and Expression" (Chapter III on "Touch"), Bach is said to have played with seven or eight different touches. The use of different touches is not only desirable, but also very important. Legato touch, however, is most important, as it is the foundation on which to build artistic organ-playing.

The student who has the opportunity of studying under a reputable teacher will be guided in the accomplishment of this important principle. For the student who lacks this opportunity, we suggest the playing of scale passages—as well as of more extended intervals—at a slow tempo, listening carefully for the cessation of one tone at exactly the instant the succeeding tone is heard. A decisive action of the finger should be used avoiding any suggestion of sluggishness.

As an illustration of the effectiveness of a mixture of legato and detached notes, we quote from the subject of the *Great G Minor Fugue* of Bach.

Ex.1



The reader may here observe the similarity in the first, second and fourth groups of notes, each of these groups being played legato; while the third group, different in content, affords an opportunity to use a detached touch for the leaping notes, where its use is most effective as a rule. Some players may prefer to play the subject of this Fugue non-legato—with the slightest possible detachment of notes, but the decided detaching of the leaping notes would still be effective.

Independence

A second fundamental in good organ-playing is independence between the two hands, and between the hands and feet. The independence between the two hands may, of course, be acquired at the piano, though it will be of some advantage to practice exercises for two hands, played on separate manuals. Independence between hands and feet may be acquired by playing exercises for left hand and feet, and right hand and feet (such as appear in "The Organ" by Stainer), followed by a liberal use of Trios for two manuals and pedals, such as those appearing in the Stainer work already mentioned; in " Master Studies for the Organ," Carl; the "Trios" by Albrechtsberger, and the "Sonata Trios" by Bach.

Pedal Technic

A third fundamental required in organ-playing is adequate Pedal Technic. A well known Philadelphia pianist and teacher has stated that three elements are necessary in good piano-playing:

(1) Technic
(2) Technic
(3) Technic.

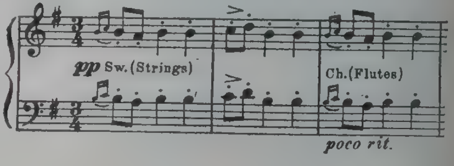
This important feature is necessary in organ-playing as well; and this article is based on the supposition that the student has already acquired key-board dexterity at the piano; as it is absolutely essential that the student whose goal is fine organ-playing should have a fine, clear-cut keyboard technic. This must be augmented by a corresponding pedal technic, which may be acquired by avoiding all rigidity, and the practice of such exercises as those included in Nillson's "Pedal Studies." The writer feels that the use of heel and toe pedalling should not be overdone in passages requiring brilliant pedal-playing—the use of alternate toes, producing perhaps a more crisp, clean-cut effect. The alternate use of toes, however, can also be overdone, evidence of which, in the writer's opinion, sometimes occurs in the compositions of one of the well-known Organ Composers in America—in his pedal indications. Phrasing in the parts written for the pedals must not be overlooked. The latter has been perhaps, a common fault in the past.

Tone Color

A fourth requirement for good organ-playing is a thorough working knowledge of the quality of the various stops, and a keen sense of tone color. Here lies an opportunity for experiment. Organs differ greatly in quality and balance of tone, and a registration that is excellent on one instrument may not be satisfactory on another; so that each instrument must be studied and suitable registration evolved. This includes the ability to registrate effectively on a two manual organ composition written and registrated for three or four manuals. It will not be sufficient to rely on the use of the Great Organ as a substitute for the Choir Organ. It often may be necessary to transfer the indicated Swell Organ part to the Great, using the Swell Organ as a substitute for the Choir Organ. As an illustration we will refer to the beautiful Tone Piece "Night" by Cyril Jenkins. The first four measures are alloted to the Swell Organ—the next two to the Choir Lieblich Gedackt 8′. As most two-manual organs do not include an 8′ Gedackt in the Great Organ, and in many cases the Great Organ is not enclosed in a swell box, it would be advisable to play the Choir Organ passage on the Swell Organ, making the necessary change in registration to the 8′ Stopped Diapason, changing again for the next four measures which are assigned again to the Swell Organ. The next two measures should be played on the Swell Organ Stopped Diapason as before, and so on. In this way the Swell Organ is used instead of Swell and Choir, by simply changing the registration. The little "Dialogue" between Swell Organ and Choir Organ on the last page of this composition may be treated in a similar manner.

While it is desirable to have variety in registration, changes should not be made simply for the sake of changing. Too many changes produce a feeling of unrest, and frequently are not justified. As an instance, in playing the well-known *Air for G String* by Bach, it is not good taste after playing one section on a registration suggesting string quality for the solo, to change to Clarinet, English Horn or some other quality for the second section. The composition was originally written as a "string" solo; and if any change in registration is made, it must simply amplify or modify the original color, not change it. A change in color would not be in keeping with the character of the composition. This, of course, does not apply to all compositions. For instance—in the charming "Grandmother's Minuet" (piano) by Grieg, which adapts itself beautifully to the modern organ—at the *Con Moto* section the first two measures may be played on a "string" combination, followed by the next two measures on a "flute" combination, though the piano copy does not indicate a change of color. This antiphonal effect may be continued throughout the section, though not always in two measure phrases.

Ex.2



In this instance we are not attempting to suggest the instrument for which the composition was originally written (as in the case of *Air for G String*) but rather we are "orchestrating" the number for the organ.

Great care must be taken in the changing of stops so that the flow of the rhythm may not be interrupted. Frequently the change may be made, during a rest for hand or foot, at a point in advance of the place where the change appears, provided the department of the organ where the change is to be made is not being used. Opportunities thus presented should be used and the registration practiced as part of the composition.

Phrasing

A fifth and very important requirement for good organ playing is Phrasing. This important feature is neglected perhaps more than any other. Much of the organ playing in past years has been deadly dull and uninteresting, because of lack of rhythm, phrasing and similar features. The writer recalls once hearing the remark that a certain organist phrased "when he changed manuals" and "when he gets off the bench." There has been much improvement in this direction recently, and no doubt much of the credit must go to the "movie" organists of the better type, who have imparted to their playing a pronounced sense of rhythm. A constantly moving mass of tone, without break, without undulation, and without nuance, soon becomes tiresome, and the student should endeavor to avoid this condition. Various means may be employed to bring about a more interesting interpretation. This may be done by a cessation of tone (similar to a singer taking a breath); by a slight *tenuto* on a note to be accented; by an *accelerando* with its compensating *ritardando;* by *crescendo* and *diminuendo;* by the introduction of detached notes in passages of a contrapuntal nature; and by accents produced by the shortening of the note or chord preceding the note or chord to be accented.

In the use of the *tenuto*—dwelling on a note to be accented—care must be taken

MR. HENRY S. FRY
At the Console of His Organ at St. Clement's Church, Philadelphia

that the holding of the note is very slight and the effect that of a natural accent, without the feeling of an interruption of the flow of the passage. The *accelerando* with its compensating *ritardando* is perhaps best illustrated by the pendulum of the clock which has its *accelerando* during its downward progress, and its *ritardando* on its upward progress to a new starting point, which precedes a new *accelerando*, and so on.

Organ Specifications

While not absolutely essential to good organ playing, a knowledge of organ specifications, mechanics and structural features of the instrument is of much value. If a contract for a new instrument is to be given the organist should be able to examine the specifications, not only to see that the suggested steps are the most desirable for an instrument of the intended capacity, but also that the specifications are not misunderstood by those who have the placing of the contract. It is not difficult for a builder to take advantage of the lack of knowledge on the part of the average layman on matters pertaining to the organ, and in many cases this is true also of organists who are not familiar with the subject.

Modern organ-building, unfortunately, has developed to too great an extent a system of "borrowing" or "duplexing" stops; *i. e.*, making one set of pipes do the work for two or more stops. A certain amount of this is desirable under some conditions; but the purchaser should know just what he is securing for the money expended. A perhaps common but questionable practice is when the builder, for instance, inserts in his specifications a Clarabella, 73 *pipes* on the Swell Organ, and a Melodia or Concert Flute, 73 *notes* on the Great Organ, using the same set of pipes for both stops, though giving them different names. The writer recalls an instance some years ago, where in a theatre organ, a Quintaton, 16-foot on the manuals, was used as a Bourdon 16-foot on the pedal. The distinctive feature of the Quintaton (the prominently developed twelfth) is a distressing fault if present in a Bourdon, and such use serves as an illustration of the abuse of the borrowing or duplex idea—desirable though it may be in many instances.

Another unfortunate tendency in modern organ-building is that of a pedal organ derived largely from manual stops. The practice of borrowing for the pedal organ has economic advantages; but its use should be limited to the point where it does not affect the adequacy of the pedal department. The borrowing of a Swell soft 16-foot Bourdon, or a swell soft 16-foot reed or string for the pedal is not objectionable; but when a large organ is constructed with a pedal department of perhaps only forty-four actual pipes, the economic principle is being carried out to the detriment of the effectiveness of the instrument. The writer recently was invited to play at a service of the American Guild of Organists, in a church where there is a fine instrument. Although there were only about eight stops in the Pedal Organ it consisted of eight *real* stops, and what a glorious pedal tone!

Knowledge of specifications and general organ construction will enable the organist to guard those who have the placing of contracts against pitfalls of the kind named, provided, of course, the latter are wise enough to consult the former.

Organ Literature

The organist who does not have the advantage of instruction by an experienced teacher can secure much information and knowledge and may keep in touch with matters pertaining to the organ by taking advantage of the excellent literature—magazines, books and pamphlets that are published. For those who may not be familiar with this literature we might suggest, in addition to THE ETUDE, with its Organ Department, such organ magazines as *The Diapason, The American Organist* and *The New Music Review*. In the book line we would suggest:

Organ Playing—Its Technique and Expression ....A. Eaglefield Hull
The Organ and Its Position in Musical Art ....H. Heathcote Statham
Organ Stops and Their Artistic Registration ....Geo. Ashdown Audsley
Bach, the Organist, and His Works..Pirro
The Organ Works of Bach..Harvey Grace
The Organ in France....Wallace Goodrich

Pulpit and Choir

From an Address by Herbert J. Tily, Mus. Doc.

[Dr. Tily is one of the foremost men in the Department Store business in America. For years he has been the general manager of the Strawbridge & Clothier Store in Philadelphia. During this time his activities in music have been of such a very valuable nature that they put to shame those of many professional musicians. He has written much choral music; he has conducted big choruses, as well as conducting performances of light opera. He has been president of the Philadelphia Music League which last year presented what was probably the most gorgeous musical pageant ever given in America. His degree of Doctor of Music comes from Villa Nova College. For many years he has been organist of St. John's Protestant Episcopal Church at Cynwyd, Pa. The following is part of an address delivered at a convention of the National Association of Organists. Editor of THE ETUDE.]

I AM going to assume as true that which I believe is true—that as a class, organists possess high intelligence and full sympathy with the devotional function of religious music. Further, it is true that the standards of church music have greatly improved during the last few years, but also that there remain special musical problems in many churches that await solution. I am going to build on these acknowledged and accepted facts some suggestions for you and for those to whom you minister. I suggest first, that you devote more time to a sympathetic, careful study of the real needs of the people you elect to serve through the medium of your art. I think you will agree that these needs are not the same in every parish.

The Type of Choir

If in any church the devotional needs of its congregation seem to be adequately and ideally served by the singing of a fine quartet of real artists, then, fortunate indeed, from the standpoint of the labor and thought involved in preparation for the services, is the organist who presides over this type of choral organization. Perchance, though, such an organist has a vision of finer, broader, more far-reaching work to be done through other means. I venture to express the hope that there is no one present who would not feel a noble discontent under such circumstances, no matter how satisfied clergyman, choir, and congregation might be.

I do not wish to appear as opposed to the employment of the very best talent; on the contrary, I *plead*, the church should and must have the best services of the best artists. Nothing less is *right*; any other attitude toward the supreme importance, dignity and sacredness of public worship is inconsistent with every teaching of the church itself. As a matter of fact it is the all-too-prevalent belief, that something less than the best possible is acceptable to God and man that makes your work as an association necessary and timely, and this humble essay of mine worth while.

KIMBALL

"The Instrument of Yesterday, Today and Tomorrow"

EMINENT organists—in their praise of the Kimball organ—enhance the prestige built up for Kimball instruments by famous singers and instrumentalists in their heartily voiced admiration of Kimball pianos.

Pietro A. Yon says: "In the past few years of concert work in almost every state I had the pleasure to perform on Kimball organs. They have always given the best of satisfaction that a recitalist can wish in mechanical promptness and quality of tone."

Kimball pianos and pipe organs satisfy the most exacting.

THE BROEKHOVEN COURSE IN MUSICAL COMPOSITION FOR BEGINNERS
IN 25 MAIL LESSONS

A correspondence course specially prepared and personally supervised by J. Van Broekhoven, of whose standard work on Harmony 19,000 copies have been sold in the United States; a text book used in the Paris Conservatory.

This short course will teach you to write a lyric song—words and music,—arrange an accompaniment—orchestrate it for orchestra and band—adapt it for male, female and mixed chorus—and give you the forms of popular music in a

Practical, Clear and Complete Course

JOHN PHILIP SOUSA'S OPINION OF THIS COURSE

My Dear Mr. Van Broekhoven:
It affords me great pleasure to speak in the highest terms of your splendid exercises known as **The Broekhoven Course in Musical Composition.**
Your practical experience of many years, together with the consummate technical knowledge, leaves you thoroughly equipped to produce a work of benefit to those embracing the musical profession. I wish you every success in this great undertaking; for you deserve it.
Very sincerely,
JOHN PHILIP SOUSA.

The Church a Musical Center

So please do not think I purpose advocating the discontinuance of anything that is so excellent as the participation of our finest vocalists in our services. Rather would I arouse in your minds, and better still, in the minds of congregations and clergy, this great question: is it fair to you and is it for the best interests of society to limit the employment of your talents? Should not the organist of every church be encouraged and supported to the end that he may devote his entire time to making the church a great musical center in the community in which it is placed? Rather than being with your little group of artists, superlatively fine though they may be, just a kind of artist impresario employed to give a few sacred concerts weekly, should you not better be a managing musical director of a great religious community, your chief work the preparation of that community for personal participation musically in the most exquisite, the most spiritual, the most soul-satisfying service it is possible for finite man to render to an infinite God? In doing this work with this great end in view you will establish a cultural influence in your community that must bring with it many collateral blessings.

Is this too generally stated or must I tell you in greater detail what I have in mind? I am sure you feel with me that one of the greatest helps to finer living is the ability to find self-expression through the medium of one of the arts, and that the easiest of rapid achievement is through the art of singing. Especially is this true of choral singing. If you, then, in preparing your community for musical participation in divine worship, form as collateral aids to this great end sight-singing classes, choral societies, a fine chorus choir and classes for individual vocal instruction; if you aim to develop congregational singing; if you give educational concerts and popular, easily understood talks on musical subjects; if you co-operate with the public schools in matters musical; if you influence your community to have in every home a library of part song to the end that choral singing may become a popular social diversion (thus happily displacing some of the unwholesome banal social diversions of our times); if you popularize in proper ways organ and choral recitals; if you are always cheerfully co-operative in any community movement of musical significance; you not only achieve your great aim, the elevation to greater beauty of the musical worship of your church, but you become social workers of great power.

A Challenge to Organists

Pray don't protest that this is too big a program. I know you as a class, better. I believe, also, that no group of workers can do this great musical work more efficiently than organists, and what is perhaps more to the point, no musicians have so great an opportunity. The many thousands of churches in America are just so many thousands of community centers pledged and consecrated to the highest spiritual and social uplift of our teeming millions. Each is directed by a man of God whose life is consecrated and devoted to ministering to humanity's deepest needs, and both are supported by millions of believers who know that man's duty to God cannot be fulfilled unless one fulfills also one's duty to man. Is it not *the* vineyard in which to work for the great end I have outlined, and are you not the workers to whom the call to labor comes with the most profound insistence?

I am fully aware of the fact that some of you could justly protest that the program I have outlined could not be carried out in all its details in every church, nor would it be possible of accomplishment by every organist, but I am speaking for you and to you as a class. As an association, your work should aim to be as comprehensive as I have suggested. Each one of you, however, can have the comforting assurance that if the biggest things are not possible of achievement in your church, yet each can be made a center for such activities as can be accomplished. Each church, small and large, is a center of some community life, and each has a congregation to be uplifted and edified by the music best adapted to its understanding.

And this suggests that I say just the briefest and, withal, most humble word to you as to a second type of careful, sympathetic study of the real needs of the people you serve. Unless church music really leads to devotion, really uplifts, it fails utterly to fulfill its high mission. No matter how fundamentally good, how soundly artistic a composition may be, it's the subjective reaction and not the objective fact that is supremely important in determining its value as spiritual food. The tune "Bethany" may irritate you so that you are quite the reverse of being incited to devotion, if you are forced to listen to it or play it too frequently, and yet beside you some good soul in tears finds in it an emotional significance that justifies its being rendered. On the other hand some fine masterpiece thrills you to your inmost being and leaves your neighbor cold and disappointed. When the disparity of effect is confined to a few individuals in a congregation it is negligible, but when, with few exceptions, they feel alike about a composition it is a fact to be reckoned with.

Each of you, if you are conscientiously desirous of making your church work a means to an end, must be willing to compromise with your ideals as to the means to be employed, if a rigid insistence on your ideals jeopardizes the full achievement of the end needed and desired. That end, of course, is worship in spirit and in truth. Your great task is to find out, each of you in your several churches, when the highest requirements of art must be subordinated to the fundamental needs of the worshipers.

Your playing, your singing, must be *understandably* devout to your particular congregation.

Knowing Our Minor Neighbors

By Jennie C. Kern

WHEN teachers have trouble in getting pupils to remember the different forms of the Minor Scales, the following plan may be used with good results:

Let the pupil consider himself as the Major Scale. Mr. Parallel Minor lives in the same house with him, comes out of the same door, but does not look anything like him, because Mr. Parallel has a different key signature (three flats more or three sharps less).

The relative Minor brothers live a minor third below Mr. Major, but look exactly like him, having the same key signature. Mr. Harmonic Minor has his seventh tones sharped (raised one-half step) both ascending and descending. Mr. Melodic Minor has his sixth and seventh tones sharped ascending and none of them descending. Mr. Mixed Minor ascends like his brother Melodic and descends like his brother Harmonic.

"The Place of the Voluntary," by E. A. H. Crawshaw, which appeared in the September issue of The Etude, was reprinted from "The Choir," of London, England, to which journal we had in mind to give full credit, but by some oversight this was omitted in the making up of pages.

On Approval Coupon
OUTFIT OF
CHRISTMAS SAMPLES
For Christmas Committees

Assortment of Christmas Publications for All Kinds of Choir Programs

When a Christmas committee meets, the chairman should be able to put before the committee as wide a line of program material as possible. The committee may then select the particular type of program that appeals to it and act promptly and efficiently. A Christmas committee should have before it:

Christmas Choir Cantatas
Separate Christmas Anthems
Christmas Anthem Collections
Christmas Solos and Duets
Christmas Carols (Standard and modern)

Clip this coupon, pin or paste to a sheet of letter paper, sign your name and address, and get on approval just such an outfit for your committee. After 10 days pay for all copies not returned postpaid to

LORENZ PUBLISHING CO.,
Dayton, Ohio (216 W. 5th St.)

Question and Answer Department

Conducted by ARTHUR DE GUICHARD

Always send your full name and address. No questions will be answered when this has been neglected.

Only your initials or a chosen nom de plume will be printed.

Make your questions short and to the point.

Questions regarding particular pieces, metronomic markings, etc., not likely to be of interest to the greater number of ETUDE readers will not be considered.

Double-flats

Q. *In what keys can there be double flats* (♭♭)*?*—B. C., Buffalo, N. Y.

A. In B♭♭ major, and in G♭ minor, both being keys which are not used.

Nomenclature of Women's and Men's Voices.

Q. *a. Which is a man's highest voice and which a woman's lowest? b. Which is a man's lowest voice and which a woman's highest?*—Cora B., Pasadena, Calif.

A. a. The highest voice in men is the counter-tenor; the lowest is the heavy bass (basso-profundo). b. The lowest voice in women is the contralto; the highest is the soprano.

Definitions of Consonance and Dissonance.

Q. *What is a consonance? What is a dissonance?*—Puzzled, Cincinnati, O.

A. Two different notes which give to the ear the impression of a single sound, by reason of harmonious effect produced, form a *consonance*. Two different notes which give to the ear the impression of two perfectly distinct sounds, by reason of the discordant effect produced, form a *dissonance*.

Diatonic versus Chromatic.

Q. *Please explain the difference between Diatonic and Chromatic.*—Marion, Los Angeles, Calif.

A. The diatonic scale is formed by a conjunct succession of tones and half-tones, proceeding according to convention; while the chromatic scale is a conjunct succession of half-tones.

Classification of Movements.

Q. *Would you kindly define the different kinds of movements. There seems to be so much confusion in some of the meanings or interpretations, such as andantino, allegretto, moderato, and so forth.*—X., New Jersey.

A. Very quick movements: *prestissimo, allegro vivace.*
Quick movements: *presto, allegro, vivo.*
Moderate movements: *moderato, allegretto, andantino.*
Slow movements: *andante, lento, larghetto.*
Very slow movements: *largo, grave, adagio.*

Antiquity of the Cornet: its Ancient name.

Q. *Is the cornet a very ancient instrument? Is it not, rather, a comparatively modern invention to displace the trumpet?* Brass, Baltimore, Md.

A. The cornet is a very ancient instrument, but not the cornet as it is now known. It was made of wood, usually covered with leather—some were of horn—its mouthpiece was of ivory or hard wood and its tube had six holes for the fingers, with two underneath for the thumbs. Its date is unknown, but mention of it is found in a Psalter of the year A. D. 1000; and the Harleian manuscript gives a list of Henry VIII's musical instruments from which we learn that the cornet was known by the name of gitteroune: "xiiij gitteroune pipes of woodde in a bagge of leather they are caulled Cornettes." The metal cornet, or cornet-*à*-pistons, as we now know it, is very modern and dates from about the year 1825. It was never intended to be a rival to the trumpet. Its tone is much coarser and less musical. The great classical and symphonic composers have not included it in their orchestras.

The Diminished Seventh Chord.

A question was asked in these columns recently about the Diminished Seventh Chord and a concise definition was requested. In reply we stated: "The best definition is that it is the first inversion of the dominant 'minor ninth with the root omitted.' 'It consists of three super-imposed minor thirds.' Now comes a correspondent who seems to object to that reply, who says, 'there is only *one minor element* in the chord,' who gets his metaphors badly mixed by talking about: 'mama,' 'cook and cherry pie,' 'squash' and so forth, and evidently seeks to know any authority for the above definition. In conclusion he confesses that he needs 'clarification.' Here follow a few 'authorities:' Sir Charles H. H. Parry, sometime Professor of Music at Oxford University, Doctor of Music, both of Oxford and Cambridge Universities, well-known composer, writer on the Theory and Art of Music, says in the last-named work: 'The complete chord, which is commonly known as that of the 'diminished seventh,' *is, properly speaking, an inversion of the chord of the minor ninth.*' Sir John Strainer, composer, for sixteen years organist of St. Paul's Cathedral, London (Eng.), also predecessor of C. H. H. Parry as Professor of Music in the University of Oxford, and a well-known writer on Harmony and Theory, says: (treating of the chord of the dominant ninth) . . . . the 'minor ninth, the most important chord in music . . . . In its inversions, the dominant itself, the ground-note, is nearly always omitted. . . . . One chord is pre-eminently adapted to an alteration of notation: it is the chord of the minor ninth. In the inversions of this chord the dominant on which it occurs is almost invariably omitted.' To this statement, many examples are added. Maurice S. Logan, in his excellent work on 'Musicology,' says: 'If the root of the V_9 chord is omitted, it becomes either the $vii°_7$, or $vii°_7$ chord, according as the 9th is major or minor. As these two chords have no perfect 5th, and on the principle that every fundamental chord should have a perfect 5th, some theorists regard them as V_9 chords with root omitted, thus including them in the general class of dominant harmony.' 'The $vii°_7$ may evidently be regarded as the V_9 chord, with root omitted, of a minor key, thus being classed as dominant harmony.' "

Correct Hand-position.

Q. *In playing the piano what is the proper position for my hands; should I strike the notes with my finger-nails and turn my hands out towards my little fingers?*—W. B., Minneapolis, Minn.

A. The nails should not touch the keys; strike with the cushion of the fingers, all except the thumb, which strikes on the fleshy side near the middle of the thumb-nail; fingers slightly rounded, not flat; let the hands be turned *in* slightly *towards the thumbs.*

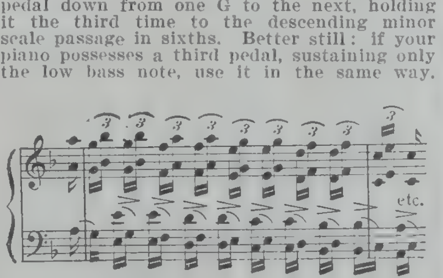
A "quantum suff." of divers questions.

Q. 1. *Are men's and women's voices produced and trained in a similar way?* A. Yes; to a certain extent. A precise knowledge of the male voice is indispensable in order to know how to train the covered voice and the head tones (*not falsetto*). See answer to "C. E. M." in this number. 2. *Can one learn to beat time for a choir alone?* A. Yes; consult "Choir and Chorus Conducting," by Wodell. 3. *Would you send me a list of songs for beginners, also the names of some pretty quartets for male voices.* A. Any good publisher will supply you with a graded list. 4. *I have heard that good classical songs should not be taught to beginners; what do you advise?* A. By all means begin with good classical songs of the slow, legato order, as soon as the pupil can take song work. 5. *How do you pronounce Mana-Zucca, Dvořák?* A. Mah-nah Tsoo-kah; Dvor'-zhahk.

The Pedal in 2nd Concerto, op. 22, Saint-Saëns; D minor Toccata, Bach-Taussig.

Q. 1. *How should I employ the pedals for the opening of the Andante Costenuto of the 2nd Concerto, Saint-Saëns?* 2. *Kindly tell me how to count this passage of the D minor Toccata, Bach-Taussig. Do the first G's come together?*—Old Reader, San Francisco, Calif.

A. 1. Take the sustaining pedal on each of the three low G's (octaves), holding the pedal down from one G to the next, holding it the third time to the descending minor scale passage in sixths. Better still: if your piano possesses a third pedal, sustaining only the low bass note, use it in the same way.

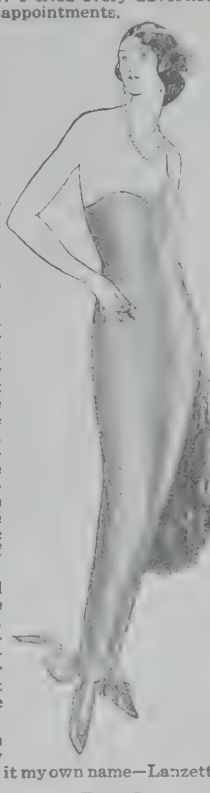


2. The first G's come together. Practice slowly, counting eight ♪ notes to the measure and giving a slight accent to the beat (that it, to the first note of each triplet in right-hand). Practice each hand separately, gradually accelerating the pace until the "presto" speed be attained, counting 4 ♩ to the measure and playing smoothly throughout; the slight accent will now be on the ♩, thus marking the descending passage from G to E through the three measures. The left-hand, also practiced slowly and separately, gets its slight accent on the first note of each slur (this completes the right-hand triplet), the second note of the slur is simultaneous with the first note of the right-hand triplet, thus descending in octaves with the right hand. When sufficiently proficient, play both hands together, absolutely smoothly but with the characteristic 1 (strong)-2 (weak), 1-2, 1-2, 1-2 of the bass. This is a good occasion to apply the Biblical recommendation: "Let not thy left hand know what thy right hand doeth."

I Have Found Out How to Get Rid of Superfluous Hair At Once

Here's the Secret

I had become utterly discouraged with a heavy growth of hair on my face and lip. I tried every way to get rid of it—all the depilatories I had heard of, electrolysis, even a razor. I tried every advertised remedy, but all were disappointments.



I thought it was hopeless until there came to me the simple but truly wonderful discovery which has brought such great relief and joy to me and to other women that it really cannot be expressed in words.

My face is now not only perfectly free from superfluous hair but smooth and soft as a baby's, all by use of the simple method which I will gladly explain to any woman who will write to me.

This amazing method is different from anything you have ever used—not a powder, paste, wax or liquid, not a razor, not electricity. It will remove superfluous hair at once and will make the skin soft, smooth and beautifully attractive. Its use means an adorable appearance. And you face the brightest light—the most brilliant electric lamps—even the glare of sunlight joyously.

With this method, used according to the simple directions I will give you, your trouble with superfluous hair is over permanently. You will never again appear with that ugly growth to disfigure your face.

So overjoyed was I with the results this discovery brought to me that I gave it my own name—Lanzette.

Send for Free Book

A book that tells just how this wonderful method gets rid of superfluous hair is free upon request. Don't send a penny—just a letter or post card. Address Annette Lanzette, Dept. 1136, care Hygienic Laboratories, 204 S. Peoria Street, Chicago, Ill.

The Violinist's Etude

Edited by ROBERT BRAINE

It is the Ambition of THE ETUDE to make this Department "A Violinist's Magazine Complete in Itself"

The Bow

By Otto Rindlisbacher

EXPERIENCED violinists know that a good tone can be produced only with a good bow, regardless of how good the violin may be. It is therefore obvious that a good bow is as essential to the violinist as is the good violin, if not more so. With a reasonably fair instrument and a good bow a good tone can be produced, whereas, with a good violin and a cheap, poorly haired bow, this is an impossibility.

Each individual violinist must determine by experience just what sort of a bow, in regard to length, balance and weight, is best adapted to his own personal playing. For dance and orchestra work where volume is desired, usually a heavy bow is used, while in concert and solo work the lighter bow is more desirable. No rule, however, applies to all players.

There are many causes which tend to make a bow worthless, but the trouble is almost invariably found in the hair, this being either of a poor grade, too much or too little, worn smooth or dirty and greasy. A poor grade of rosin, too much, too little or an uneven spread, will cause trouble.

Under the Microscope

Occasionally we find a bow which has been used for many years without changing of hair. Such a bow cannot be expected to give good results. Under a microscope we find that the hairs are not smooth but rather rough with saw-like teeth, all pointing in one direction on each individual hair. On a well haired bow half of the hairs are reversed so that some of these small teeth point in either direction. It is these little teeth that hold the rosin. With any amount of playing, the teeth soon wear off leaving the hair smooth. It is then time to rehair the bow. This is a simple process and any one can rehair his own bow and soon become an expert at it.

Select the Best Hair

First select the best grade of unbleached bow hair, which you should be able to procure for not more than fifty cents. Never use the cheap bleached hair. If the stick is not worth the best grade of hair it is not worth rehairing. The usual price charged for rehairing a bow is $1.50. As a bow needs new hair at least once a year, and, for professional players, every two or three months or oftener (your own judgment will tell you), rehairing the bow yourself will make a noticeable saving; and you may always have a bow in excellent condition.

Pound off the wax on the tied end of the hair. Cut the string and reverse half of the hairs so that you are sure all of the little teeth do not point in the same direction. Then with some strong thread wrapped a few times around, tie one end tight, cut the hair off even about one-sixteenth of an inch from the thread and with a match singe the ends. This will cause them to expand and keep them from pulling out of the string. Put a small amount of wax or rosin on the ends and with a match burn it into the hair.

Important Details

You will next place the tied end into the tip of your bow in such a manner that the hair will fold *over* the block. The block which holds the hair must fit very tightly and should never be glued in. With a fine comb, even out all the hairs, pull them tight and get the desired length (about one-fourth of an inch back of the block in the frog.) Tie these ends with hairs as even in length as possible and treat the same as the other end. Now remove the frog from the bow, slip the ferrule over the hair (it would be impossible to do this after the hair is fastened into the frog), and fasten the hair into the frog in the same manner as it was fastened into the tip, so that the hair will fold back over the block. This block should never be glued in, although you might drop in a small amount of rosin. Care must be taken not to twist the bunch when fastening it into the frog. Now put the frog back on the bow and tighten slightly; put in the slide and place the ferrule. Next you must wet the hairs. This will cause them to stretch to an even length. Tighten the bow. Now push a wedge under the hair (on the side towards the stick) exactly the width of the ferrule and thick enough to be tight. While pushing in the wedge, spread the hairs evenly. Your job is now complete.

New hair should be washed as it is sometimes greasy. This can best be accomplished with common soap and water. A few hours are required to dry the hair perfectly. A bow washed in the evening may be used the following day.

When dry, rub in some powdered rosin held in a piece of cloth. Always use a good clear grade of rosin and rub it a few times the entire length of the bow. With more rosin on some parts of the bow than on others the tone produced will be uneven. Wash the hair every three weeks or oftener, and occasionally wipe off the rosin which collects on the stick. Always loosen the hair after playing. This leaves the hairs apart so they will not gum together; and it also keeps the stick from becoming straight and dead.

Keep a very little oil on the screw. A piece of tape wrapped a few times around at the frog makes a very good thumb grip.

Never touch the hair with the hands, and always hold the bow at the frog. Oil from the hands soon causes the bow to slip where the rosin will not stick.

Many players have a habit of tightening a bow so much that the stick becomes almost straight, which will, in a short time, ruin a good bow. With good hair a loud tone can be produced with little pressure and it is necessary to tighten the bow only enough to free the hair from the stick. Use rosin lightly but often, for the best results.

When purchasing a new bow, select a straight stick with plenty of bow, made of a good standard bow material. With proper care it will last a lifetime and by being accustomed to its weight and balance you will always "play at your best."

The Young Teacher

By Sid. G. Hedges

THE young violin-teacher has no right to expect an easy time; if he does he will not get it. It is a momentous hour when the young violinist decides that his student days are over and that henceforth he is a professional.

A young man, from a small town, remarked recently:

"I thought it would make a stir when I came back to the old town to teach. They used to be glad enough of my items at local concerts; but not a single person seems to have noticed my arrival, and no one at all has taken any interest in me now that I'm a professional."

This is a rather common experience among newly arrived teachers.

Supposing a new store-keeper stole into a town one Monday morning, quietly opened shop and sat down, waiting. Nothing at all would happen, except that he would get very tired of waiting. But the new store-keeper does not behave like that. For weeks before his arrival great posters flame everywhere with the news of his imminent, momentous opening. The local papers shout the intelligence; and the building destined to be his store is obscured under an array of shrieking notices. He makes most wonderful promises; and on the day of his epoch-making arrival the whole town is astir to see if he can do for them all that he has promised. Whether ultimate success comes depends on his own work, whether or not he is just a bluffer.

Now it is unfortunate that the average musician has little of a business training; for he would better realize at the outset that it is essential for him to be a business man as well as an artist.

He must advertise widely:

"James Newteacher, A. B. C. M., will be able to take pupils in violin playing from January 1."

This is a mere theme, many elaborate and striking variations may be played on it. The town should be flooded with handbills telling how a highly qualified music-teacher is coming, and pointing out the obvious reasons why everyone should take lessons. It is a good plan to repeat this leaflet inundation fairly frequently until a good number of pupils is secured. The point is that no sooner does Mr. Smith think of sending young Jim for lessons than Mr. Newteacher's name springs instantly to mind, as a well-qualified, up-to-date man.

Pupils may often be obtained by personal canvassing. One should call on likely and unlikely houses. One teacher declares that whenever her pupils drop below the minimum number for her requirements, she does a couple of days' canvassing and never fails to get the necessary additions.

One's friends also should all be on the *qui vive*. Thus, with proper preparation some few pupils should already await the young teacher. Incidentally, it is not always wise to make reductions in fees for acquaintances, else one day when pupils are plentiful the time at the cheap rate may be begrudged.

Of course at the end of one or even two years pupils may still be few. It takes a long time for a teaching connection to grow. A reputation is not made in a week; it is formed slowly, but surely, bad or good.

Successful pupils are eventually the finest advertisements for any teacher; and these, of course, do not serve until after several years' tuition. But there are other ways of obtaining publicity for the young violin-teacher. He may give occasional recitals if he is capable. A good recital makes a splendid opening for one's teaching career. Solos should certainly be played at local concerts; though it is not good to have one's name too often among a crowd of amateur mediocrities.

The young professional should lead things himself—an orchestra if possible, or a choral society or choir. Little lectures on musical appreciation, history, and kindred topics similarly help to keep one's name and abilities before the public.

Lesson fees must be definitely settled at the beginning; and it is better to start with them too high than too low. An advertised price cannot well be raised; but to make a reduction, if necessary, is easy.

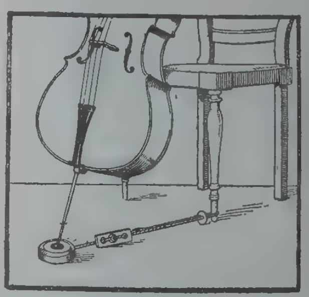
One hour is rather long for a lesson, a half-hour is short; three-quarters is the most satisfactory time when one remembers that both children and grown-ups have to be considered. Usually the new teacher finds that most of his pupils are young men of from sixteen to twenty-six years of age. There is no other type of person to whom the study of the violin seems so attractive.

It is important that the young teacher should have his entire curriculum mapped out from the outset. Usually it will be the course of studies through which he himself has worked. It will begin with a tutor and lead at any rate, into Kreutzer and Rode. These two famous collections may well be preceded by Fiorillo, Mazas and Kayser. The important point is that the teacher should know his complete course thoroughly and should understand from the beginning exactly at what results he is aiming.

Patience, tact, ingenuity are each required for successful music-teaching: patience, to understand and sympathize; tact, to obtain and retain pupils; and ingenuity, to devise methods of making seemingly dull things fresh and interesting.

The young violin-teacher needs to know something of violins, bows, and their fittings; for he will often be called upon to procure outfits or select instruments. If he is unable to fit a bridge, or peg, or tail-gut, or to adjust a soundpost, he will impress his pupils very unfavorably.

Yes, the violin-teacher certainly may have a rough time at first; but, if he be persevering and deserving, success, with its compensations and happiness, will eventually arrive.



A 'Cello Anchor

AN English inventor has just patented a useful device for preventing the sharp end of the 'cello peg (tail-pin) from slipping, or from damaging floors, rugs, and carpets. He calls it the "cello anchor." In describing its use he says: "The loop of the cord is passed around the left leg of the chair, and retained in position by the fibre disc. The length of the cord is adjusted to the requirements of the performer by means of the slide. The adjustment once made is practically permanent. The device can be carried in the pocket or string bag, and weighs only two ounces. For chairs having cross or side bars the spring hook provided can be used to advantage.

"AT the present day the tools of violin mastery, of expression, technic, mechanism, are far more necessary than in days gone by."—YSAYE.

Music and Wood

By Robert Kempton Harvey

The connection between wood and music is evident to anyone who has the least knowledge of the orchestra, the highest form of modern musical organization whose instruments are made of wood. At least half—the bass, the violin and its first cousins, the viola, the 'cello and the string-bass—the entire string quartet. Then there are the wood-winds—the flute and piccolo, the oboe, English horn and bassoon and the clarinet. The percussions include the drums, the marimba and the piano. Finally we have the organ, seldom heard with the orchestra, but acknowledging as peer only the violin.

The First Stringed Instrument

Perhaps the first stringed sound-producing instrument was the bow, "the one-stringed harp that sings of sudden death;" but certainly the first stringed musical instrument was the revanestron, attributed to and named after a king of Ceylon who lived about 5000 B. C. This primitive idea was carried by traders, soldiers, and means only to be guessed at, to Egypt, where it developed into the lyre, a harp-shaped instrument used in the temples in connection with the religious rites. "I am all that is, that was, and that will be; no mortal has lifted my veil," was the creed, and in the faint light of the temples, the lyres echoed a slow, secretive accompaniment.

By various means, in various forms, this idea was carried to Babylon, city of Astareth, Greece, Rome, and into the Europe of the Middle Ages. There it became the Anglo-Saxon crwth, the French luth and the Italian viol, until finally in 1459 a German lutanist, having emigrated from Nuremburg to Cremona, a little town of Italy, made the first violin of the form so familiar to us today.

From the obscure beginning, Cremona became the center of violin making. Here labored such men as Maggini, da Salo, Amati and his pupils, Albani, Ruggeri, Guarneri and Stradivari. Here were made the instruments so highly prized today, the Cremona violins.

The violin was made of seventy pieces of wood—seventy pieces fitted together with the greatest care. The back was usually made of maple, pear or sycamore, more generally of the first. The top was of white pine, brought from Switzerland or the Tyrolean Alps. Wood cut from the south side of a trunk grown on the southern edge of the forest was preferred by the masters, because it matured more evenly. As most of this wood was floated down in the mountain streams, it had to season in the sunlight for at least five years, lest it warp.

The seasoned wood was cut to shape with an axe, for the saw injures and tears the fine wood fibres. Through long experience these masters knew how to shape it. First the wood was sounded with a hammer. If it gave a high tone, the violin was made very curved and round, almost tubby. If the sound was deep and guttural, they made the violin thin and flat. Thus did the shape offset the tone of the wood, and the result was the perfect violin.

Perhaps the most delicate work of all was the ornamentation, the fitting of the purfling which covers the joining of the back and sides and of the belly and sides. The purfling was usually a slip of maple or sycamore, glued between two slips of ebony, and the whole, perhaps an eighth of an inch in width, was fitted into the narrow slit prepared for it. When the irregular shape of the violin is considered, some estimate of the delicacy of this work may be made.

Cremonese Varnish

The final and very important process was varnishing. The secret of the "Cremonese varnish" has been lost, without doubt, forever. Many have searched and experimented, but nothing has ever been found that equals its golden lustre, its soft, transparent coloring. However, many of the ingredients used are known—plum-tree gum, Venetian turpentine, white rosin, frankincense, linseed oil, sandal-wood and alum, with colors boiled from logwood, Pernambuco wood or mahogany, but what process was used or what other substances were necessary, is unknown.

Thus in the time of Stradivarius, the super-master, was made what has been called "The one perfect thing." That there has not been a renaissance of the art of violin making is probably due to the lack of devotion to his work, of the modern artisan, which would lure him to the long, loving labor necessary to the production of the masterpiece, and this done contentedly for the pure joy of having it so. For this reason we have the fifteen-dollar fiddle and the thirty-thousand-dollar violin. The difference—well they must be heard if it would be appreciated.

The Music Sense

By Claudia May Ferrin

To attain a knowledge of music is not so easy as it may seem. Yet, as every true musician will testify, there is a simple way by which to acquire it. Most beginners think of the piano as the basic instrument—because possibly that or its cousin, the cabinet organ, may be within reach. What of the violin?

This is one of the most treacherous instruments imaginable. At the outset, a trained ear must direct in the tuning. The second string must be the A above middle C, counting by the piano key-board. It may be a year before a beginner can take an untuned violin and adjust his A string by sound alone; that is, without the piano note or some other set key to direct his sense.

Then there is the first or E string. That sound must be known, not only by its relation to A, but also because it is E. It is essential to learn so carefully as this; for when, about two or three years later, he takes up "positions" his sense of sound is his only guide as he plays next the bridge. The letters of the first position must be found high up on the lower strings. He must find on the G string the notes he played on the D string, and know these by *sound* just as he knows the note A by which to tune his instrument.

In brief, the violinist must know his every letter, from the open G to the keenest note next the bridge on the E. The piano could be played for years with not a care as to the distinctive pitch of the keys individually. One might drum into his senses the knowledge of related notes so that he should discern readily a discord. Yet not until he takes some such instrument as the violin can any one appreciate the niceties of tones and semi-tones that make real music.

If you teach Music
this is your Opportunity!

Thousands of beginners—boys and girls—young men and women—are buying Saxophones and learning to play. They are teaching themselves because there are few teachers.

With your fundamental knowledge you can master the Saxophone in a few weeks. You'll find it the easiest instrument you ever tried to learn.

And it is just as easy to teach, because it *is* so easy to learn. You get such quick results. You can soon make a reputation for yourself as a Saxophone teacher and you'll enjoy it.

Send the coupon or a postal for free copy of our book, "The Story of the Saxophone," illustrating the first easy lesson.

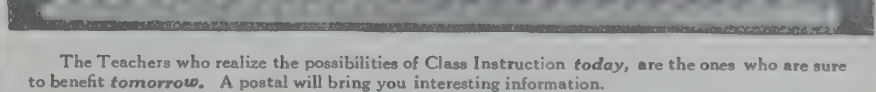
THE WILDER IMPROVED KEYBOARD

"Opportunity Knocks at Everyone's Door Once"

There will be ***thousands*** studying the piano five years from to-day where there are but ***hundreds*** to-day. From "individual" to "class" instruction, history will repeat itself in piano playing, as in practically every other branch of learning.



The Teachers who realize the possibilities of Class Instruction *today,* are the ones who are sure to benefit *tomorrow.* A postal will bring you interesting information.

The Wilder Keyboard Company, Dept. E-6 West Newton, Mass.

Violin Questions Answered

By MR. BRAINE

Easy Scales for Violin.

A. S. H.—A pupil can begin the easier scales after the first few weeks of study. Most of the first instruction books for the violin give the scales in the first position. You will find a good deal of scale work in the first position in the Hermann *Violin School* (*Book I*). 2—It is a good idea to use a book of melodies to supplement the work in the instruction book. Franklin's *Ten Easy Melodies* is very good.

The Kloz Family.

H. R. M.—The Kloz family, famous violin makers of the Mittenwald, Germany, had numerous branches, and good specimens of their work are highly esteemed by violinists. The most famous of the family were Sebastian Kloz and Egidius Kloz, and their violins command the highest prices of any of the family. Joan Carol Kloz, who made your violin, made some excellent instruments. 2—It is impossible to quote prices on J. C. Kloz violins without seeing the instruments as they are valued chiefly by their tone qualities and not so much by the fame of the maker.

The Vibrato.

M. D.—An excellent work on the Vibrato is "The Vibrato," by Siegfried Eberhardt. There is a good chapter on the vibrato in the "Violin and How to Master It." However, even a single lesson by a really good violin teacher, is worth all the books in the world in acquiring this beautiful art. 2—The shortest possible bowings in violin playing are executed by the hand entirely from the wrist. All longer bowings are a combination of wrist and arm movements.

Schweitzer.

G. L. R.—Johann Baptist Schweitzer, Budapest, was a Hungarian violin maker whose violins are valuable. His work has been much copied, and there are uncounted thousands of imitations, the bulk of which are factory fiddles of small value. Show your violin to an expert.

Starting at Nineteen.

A. S.—The age of nineteen is too late to start with the view of becoming a professional violin teacher. You would be under a heavy handicap, since you would have to compete with others who had completely finished their education in violin playing when yours was just beginning. Why not try some other profession which does not depend so much on getting a very early start? 2—If you expect to do really good work as a violin teacher you ought to have a good education yourself in the art before you start teaching.

The Double Bass.

J. O. B.—The reason why many small combinations dispense with the double bass is that, by using the piano instead of the double bass, viola and second violin, they make the piano take the place of three instruments. The double bass is of enormous importance, even in a small orchestra, since it is the foundation. 2—The heavier the string in size the heavier will be the tension when tuned to the same pitch. 3—To finger the passage you send, commence in the first position, go to the third position by placing the first finger on the note A (second note, second measure); come back to the first position by placing the second finger on G sharp (fifth note, second measure).

Professional Engagements.

F. P. D.—If you play really well the compositions you name you should be able to do some professional work. Joining the union would help you to get engagements. 2—Orchestral playing would help you very much to learn sight reading, but you can do a great deal to that end at home. See article on sight reading in the January, 1924, ETUDE. With the foundation you already have, you can add to your technic to a great extent, although you have reached the age of twenty. It is those who are first beginners at twenty who can only acquire a limited technic.

Selling Old Violins.

G. F. S.—Write to the firms who deal in old violins, who advertise them in the ETUDE, in regard to the sale of your old violins. Almost all dealers in violins are in the market for good old instruments.

C. L. M., G. N. N., J. R., M. M., B. H. O. and many others.—It has been repeatedly explained in the ETUDE that there are millions of imitation Stradivarius violins in the world, all having a Stradivarius label which reads like the genuine, duly pasted inside. Readers having such violins continually write to us asking if the violins are genuine, what their value is, and so on. It is quite impossible to answer these questions without seeing the violins. The only course for the owner of such a violin is to have it examined by an expert judge of violins. Firms who deal in old violins, such as those who advertise in the ETUDE, can pass on the value of such violins if sent to them.

A da Salo Violin.

S. D.—It is impossible to judge your da Salo violin without seeing it. Send it to a reputable violin dealer for an opinion and for valuation. 2—As far as I have learned, the mystery of the London music hall violinist who was able to make sounds emanate from a violin while standing at some distance from it, has not yet been solved.

A. Delivet.

A. K.—A. Delivet is a modern French violin maker. His violins were awarded a silver medal at Liege (Belgium) in 1905, and a gold medal at Nantes (France) in 1904, at expositions.

Ledenhofer.

O. R. D.—Sorry I cannot trace your violin signed "Ledenhofer." It may be a good violin for all that.

Setting a Violin Price.

E. A.—In justice to its advertisers, the ETUDE cannot undertake to set values on modern violins and other musical instruments, or what the quality of such instruments is, or whether the purchaser paid too much or too little for any instrument. Besides, I could not give you the value of the instrument without seeing it.

Peters and Litolff Editions.

G. T. O.—The Peters and Litolff editions, which included so many valuable violin works, are not being published at present, although it is expected that publication of the Peters edition will soon be resumed. It is said that a great many of the plates from which these editions were printed were melted for ammunition and other war material at the time of the war.

Meisel Violins.

J. McN. S.—The name is spelled Meisel, and not Miesel. Several of this family made violins at Klingenthal, Germany. There were Johann Christoph, Johann Georg and Christian Friedrich; but I do not find Carl Christian. He may have been another member of the family, however. Impossible to set a value on the violin without seeing it.

Nicholas Didier.

J. F. E.—Bauer, in his *Practical History of the Violin*, says of the violins you inquire about: "Nicolas, Didier (Aine) 1757-1833. The best of a family of Mirecourt violin makers. He made very good instruments after the Stradivari model. His violins were very much liked at one time, the result of which is that thousands of imitations with his brand, 'A la ville de Cremonne Nicolas Aine,' formed into a triangle, were placed on the market." I could not give a guess at the value of your violin or whether it is genuine without seeing it.

A Violinist's Plans.

M. C.—It is quite impossible for me to try to predict your future as a professional violinist, from the list of studies and pieces which you send me and which you say you have studied, for the reason that I cannot tell how well you play them without hearing you. If you play the list really well, you could probably get a teacher's certificate in two or three years' further study at some conservatory or school of music in St. Louis or Chicago, the largest cities near your home. I would advise you to arrange for a term of ten or twelve weeks in one of these schools, for in this way you would gain experience by which you could determine what you might expect of the future. It is rather difficult for music students in a large city to defray a portion of their expenses by musical work.

Selling Old Violins.

J. B.—If you wish to either buy or sell a genuine Stradivarius, or any other of the leading Cremona violins, it is much better to leave the negotiations in the hands of a good reputable firm of violin dealers; that is, unless you are a good expert, and know the business of buying or selling violins thoroughly. Almost all valuable violins are bought and sold through dealers. If you wish to conduct the transaction yourself, you should at least get the written opinion of a leading expert as to the quality of the violin, its probable value, and its genuineness. 2—It is very difficult to ascertain the exact prices at which Stradivarius violins have changed hands within the last ten years. There have been rumors of sales as high as $15,000 and $20,000, in the case of especially fine specimens, but the exact figures are difficult to obtain. I understand that a firm of American violin dealers has just put a very fine Strad on the market at $25,000, but it has not yet been sold at that price. 3—Stradivarius produced very fine violins practically up to the year of his death, 1737. 4—If you wish to conduct the purchase or sale of a Strad yourself, you might advertise in the leading American and European musical papers, especially those of London, England, as London is the great clearing house for Cremona violins.

Defective Fifths.

L. M.—The difficulty you experience in making perfect fifths might come from several causes. Your strings may be false, so that they will not sound true in fifths, or in fingering the fifth you fail to stop the two strings so that each string is stopped at exactly the same distance from the bridge. Then, again, the trouble might be caused from the strings being too far apart. This is especially likely to happen if you have very slender fingers with small tips. Another cause might be a defective fingerboard, which is not perfectly level. Better get instruction on this point from a good violin teacher, as no one can locate the exact cause of the difficulty without a personal examination.

Album of Favorite First Position Pieces
FOR VIOLIN AND PIANO
Price, $1.00

A volume of this kind is of great value in the violin world. It gives the beginner on the violin encouragement through the excellent numbers it contains which are melodious and interesting yet at the same time easy to play. There are twenty-two numbers of real worth arranged in progressive order. Teachers here have an ideal volume for instructive purposes and beginning violinists will find it just the volume to possess for their recreation or recital needs.

Etude Cover Design Contest

$250.00 Prize

THE ETUDE Herewith Announces a Prize Contest Open to All for Cover Designs Suitable for Our Publication.

REGULATIONS

1. The designs must have distinct musical significance with an appeal to as large a section of THE ETUDE'S widespread body of readers as possible.

   The design should be attractive from the News Stand (the selling standpoint), but must also make an effective cover for the music lover's home.

   Designs with a historical, educational or humorous trend will be considered with interest. Designs that are merely allegorical, purely idealistic with Grecian, Roman, or essentially antique grounds are not solicited. THE ETUDE is a practical paper for music-lovers, teachers and students of to-day.
2. Designs may be for two- or three-color reproduction.
3. Designs must be drawn in proportion to reduce to the standard size of THE ETUDE, 10½ inches wide by 13½ inches high.
4. The design must not bear wording or lettering.
5. Avoid the introduction of lyres, pan-pipes, lutes, antique instruments, banjo, guitar, etc. If an instrument is used employ the piano, organ or the instruments of the symphony orchestra.
6. Any contestant may submit as many designs as desired.
7. The ownership of the copyright of the winning design will rest with THE ETUDE.
8. All designs submitted must bear upon the back the full name and the address of the artist.
9. Postage to insure return must be sent with every design.
10. THE ETUDE assumes no responsibility for loss of or damage to any design, but every possible care will be taken of the designs while in our offices.
11. The contest will close Dec. 1st, 1924

Address all designs to

ETUDE COVER DESIGN CONTEST
1712 Chestnut Street, Philadelphia, Pa.

ETUDE friends everywhere are requested to notify their artist friends of this contest. Big names do not mean anything to us in comparison with effective, attractive, beautiful cover designs. Art Schools and Art Departments of Colleges everywhere are invited to co-operate with us in this contest.

Your Personality

The Amateur Musician's Stage Presence

By Mildred Holland

JUST comparatively little training in the rudiments of acquiring good stage presence would have aided many a brilliant but self-conscious amateur musician to make her career a successful professional one.

The feeling that she knows how to look well, from head to foot, when taking her place, preparing to play, and beginning—goes a long way toward making any performer feel sure of doing her very best work any time she may be called upon to appear in public.

And the ability to do her best work at will is one of the vital factors in taking any artist out of the amateur class and placing her in the professional one.

The thing that nine out of ten self-conscious amateur musicians, like most amateurs in all other branches of the art of entertaining, must learn before they can do themselves justice when playing for others, is the simple rule—go slow. No professional, whether she be a great artist, or just satisfactory enough to be worth a small salary, is ever seen to be in a nervous hurry to begin. It is impossible to do one's best without a few seconds of mental, physical and perhaps spiritual preparation. There is always plenty of time for this; the performer has only to take it.

The vaudeville pianist, who often is called upon to play music immediately following the act of a blackface comedian or a trained seal, has one of the most difficult audiences in the world to quiet and to get into a sympathetic mood for her music. One device which nearly always accomplishes the trick is to play a few chords and arpeggios, usually in the same key as the beginning of her coming selection. As her numbers are ordinarily extremely varied in character, she often uses the same device for creating a bit of appropriate pianistic atmosphere before the beginning of each new selection on her program.

Unless in special cases there should be an objection from an artistic standpoint, some variation of this little device of the vaudeville musician will help a self-conscious amateur to "go slow" in getting ready to play, as well as to prepare her audience in a number of ways.

The average stage musician looks more pleasing when playing the piano, violin, cornet, harp, and even the lowly saxophone and ukelele, than does the usual amateur playing the same instruments. The professional's self-confidence, of course, is the chief factor in making her mere outward appearance command attention and fill the eye more satisfactorily.

But the controlled facial expression, the straight back and well-held head, which are among the A B C's of good stage presence, are the chief means of expressing that self-confidence so that it impresses an audience; and these are points which any amateur, however, inexperienced, can easily copy.

Evening Bulletin (Philadelphia)

Letters from Etude Readers

Music in Maturity

To THE ETUDE:—

Your November issue is particularly interesting to me, for two reasons: First, the article by Ernest Hutcheson on "Adults and Piano Study;" and second, the little sketch, "Why Not?" by Florence Hadley. Not that many other fine things have not impressed me in this number, as have those of other ETUDES which I have read throughout the years; but these two so neatly fit my case that I feel justified in telling you how much they help.

A good many people, like myself, are exceedingly fond of music, as is suggested in your editorial, "Missing Half the Fun," and wish to do something besides winding a phonograph and pumping an automatic piano. But most of us are not gifted enough to make music a profession and have to hustle for a living or prepare for such prosaic work, during the time when a correct and advanced technic should be acquired.

It may be that we "took lessons" on the old parlor organ or square piano, or, if younger, on the new upright, and so can play a little and perhaps read fairly. Under such circumstances, when leisure and means become available there is no reason why men and women should not indulge themselves in the game of learning to play the piano, or even the pipe organ, just as well as to spend their time at tennis, golf or other sports. And while it is not expected that they will attain virtuosity, it is perfectly possible that a very considerable skill may be acquired late in life as has been demonstrated many times. So, three rousing cheers for the teachers who are willing to encourage us old timers in having more fun with music than with any other sport!

Col. Skinner,
Washington.

Recollections of Two Beginnings

To THE ETUDE:—

"Not what you say but how you say it" has become proverbial as to speech. Carrying out this same idea, one might say "Not what you teach but how you teach it."

I well remember that as a child I was put under the tutorship of an overworked, nerve-exhausted young woman whose life must have been no dream, with a large class on her hands of aggravating youngsters to which I doubtless was no exception.

My daily practice made up the dreariest hour of the day—filled with the drumming of monotonous scales and the counting of time I did not understand.

At the end of my first year of lessons this teacher migrated to another part of the country and Herr Liebrich, an old German professor, was persuaded to add me to his large class. Music lessons now became an entirely new experience. My first sight of the professor's studio was an inspiration to my young mind. The big, bright windows, the green-tinted walls almost covered with pictures of many sizes, of celebrities in the musical world, fired my imagination. At the end of the room were large sheets of white paper on which were pinned large notes cut from cardboard—the whole notes, half notes, half rests, and many, many other musical characters all grouped into families and properly named. Ah! The old gentleman, in his simple, fatherly way, knew how to interest children.

Hoping others may profit by his example, I am,

Very sincerely,
MRS. CHRIS OLESON (Minn.).

New Mines of Musical Treasure

THE ETUDE has been discovering many new sources of musical information. Watch coming issues for delightful articles.

Rockford, Ill., High School Band completely equipped with Martin Handcraft Instruments. John T. Haight is the director.

High School Bands Deserve the Best Instruments

WHEN your High School Band proudly steps out and swings into the pulse-quickening notes of their school song, they represent YOUR CITY. You want to be proud of them. You want them to compare favorably with the best in the country. And you will want to leave no stone unturned in bringing their efficiency up to the highest point. Mighty important in this connection is their instruments. Give them the best to be had. It will make for a better band because the individual members will enjoy their playing and practicing more. Do like many other leading High Schools are doing—equip your High School Band completely with Martin Handcraft Instruments. You'll have the satisfaction of knowing your band has the best.

Important Reasons for Mail Order Music Buying

The buying of music publications by mail order is not an experiment, since the Theo. Presser Co. for about 40 years has been conducting a Mail Order Music Supply House that has furnished thousands of teachers with all desired music publications. The fact that each year has shown a most gratifying increase in patronage and that many of our patrons have proven friends of a number of years standing is evidence of the satisfaction found by those who secure their music material from this house. There are important features about our Mail Order Service that mean much to the teacher and embraced in one phrase these mean *convenience and economy* to the teacher. Teachers may enjoy convenient charge accounts, liberal examination privileges, prompt, accurate and courteous service, and in every instance the best possible price. These are important reasons for the mail order patronage given us by a great host of music teachers throughout the country. We would be glad to have any teacher not familiar with our Mail Order Service to correspond with us, as it would give us pleasure to furnish details.

Cover Design Prize Contest

We have extended this contest to December first in acquiescence to popular demand. The artist friends of all ETUDE readers should know of this contest and the closing date. The conditions are given in detail upon another page of this issue. December first will be here all too soon, therefore it is advisable not to delay sending in cover drawings and paintings for this contest. Every entry will receive careful consideration, and announcement as to the winner will be made as soon as the judges can complete their work after the contest closes.

The "On Sale" System! Do You Use It?

"I do not know what I would do for teaching material if it were not for the 'On Sale' plan," has been said over and over again in various forms by teachers writing to us. Each year there are new teachers entering the field of musical education, and therefore we are making note of this immensely successful system for aiding the teacher in his or her work.

The "On Sale" plan makes it possible for the teacher to secure for examination a liberal stock of music of exactly the type and grades desired. Any number of lots of "On Sale" music may be secured during the teaching season and all may be kept throughout the teaching season, making it possible to have on hand a stock of music to care for the needs of various pupils as such needs arise. This makes immediate attention to the pupils' study material possible.

Payment for the music used from "On Sale" stock need not be made until the end of the teaching season, when unused music may be returned and settlement made for that used or disposed of to pupils.

Start early in the 1924-25 season to enjoy the convenience of this system. Write now and tell us the number of pupils to be cared for and give us an idea of the type and grades of music that you would like sent to you "On Sale." Convenient "On Sale" order blanks and a detailed explanation of the entire plan will be sent to you upon request.

If any teacher desires to see regularly each month during the teaching season new sheet music issues, packages of new publications will be sent automatically each month on an "On Sale" account if we receive a postal request to that effect. In ordering these New Music On Sale packages, it is only necessary to state that they are desired and indication given as to whether Piano, Voice, Violin or Organ music is desired. The Violin and Organ packages, of course, do not go out regularly every month, these being sent as frequently as new material is available.

Album of Arpeggios For the Piano

The successful teacher is the one that makes study attractive to pupils, and in pursuing this course progressive teachers have long since discarded curriculums that adhere strictly to dry technical works and have replaced those studies with attractive study pieces that aid in developing certain phases of technic. As a result of the demand for material of this character, a series of albums of study pieces for special purposes was started with the issuance of an *Album of Trills.* This volume met with great favor, and the later announcement of an *Album of Scales* met with an enthusiastic reception. Then, as no technical equipment is complete without ability to handle the arpeggio forms, this important phase of technic is receiving our attention in the preparation of the next volume for this series of study pieces for special purposes. The *Album of Arpeggios* will contain attractive pieces in the intermediate grades, which are based upon some of the Arpeggio forms. No better material for aiding the pupil in the development of ability to handle the Arpeggio forms can be found than will be presented in this album. The advance of publication cash price for this book is 30 cents, postpaid.

Thanksgiving and Christmas Music

There are many excellent anthems and sacred songs of praise that are available for making a notable service at Thanksgiving time. Choir masters desiring to build up a special Thanksgiving service are invited to tell us their needs and request that we may send suitable material for examination.

It is not too early to give thought to music for the Christmas season. Our stock of Christmas music is exceptional, and we have on hand quantities of anthems, cantatas and services suitable for Christmas. All worthwhile Christmas solos are carried in stock by us, and we can make suggestions in all these branches that will enable those responsible for the Christmas musical service to make this coming Christmas a great one musically in their Church or Sunday School. We have a printed list of Christmas music covering anthems, solos, cantatas, services, organ solos, and also various suggestions are given for Christmas entertainments. This folder will be sent cheerfully to anyone requesting it. Under the *Advance of Publication Offers* in this month's "Publishers' Notes" will be found three new publications for Christmas. In addition to these, we have added to our catalog since the last Christmas season the following publications:

Cat. No.	*Title*	*Composer*	*Price*
	ANTHEMS		
20472	Christians, Awake!	*Norwood Dale*	.12
20423	Joyful Christmas Song, A	*F. A. Gevaert*	.12
20424	Legend, "Child Jesus Made a Garden"	*Tschaikowsky-Bliss*	.08
20419	Lo, How a Rose...	*M. Praetorious*	.05
20422	Sleep of the Child Jesus, The	*F. A. Gevaert*	.05
20449	We Worship Him..	*August Halter*	.12
	ORGAN MUSIC		
19145	Adeste Fidelis....	*Reading-Lemare*	.40
19569	Church Festival March	*R. M. Stults*	.60
	CHILDREN'S SONG		
19571	Happy Children	*Wallace A. Johnson*	.30

New Anthem Book

Many letters of commendation upon our previously published volumes of Anthems carry suggestions that we publish more such volumes. However, as we endeavor to make each succeeding volume even better than those issued before, we do not rush new editions through at short intervals, rather awaiting until we are able to gather from the Anthems recently written a good number of desirable offerings for the repertoire of the volunteer choir. We now have sufficient material at hand from which to make a compilation, and in a few months we will have a new collection ready. Each anthem is chosen because there exists in it melodiousness that is fitting to a sacred work, and because it does not possess any difficulties that will carry it beyond the possibility of a successful rendition by the average choir. Those who are acquainted with other anthem books that we have issued will not hesitate to place their advance order for one copy of this work at the special advance of publication price of 20 cents, postpaid.

Dawn of Spring Two-Part Cantata For Treble Voices Music by Richard Kountz

Richard Kountz, whose gift of melody writing has been well demonstrated, here offers a new cantata for two-part chorus of treble voices that will be welcomed by school music supervisors and directors of young women's choral organizations. The text is by Alice Clifton Beil. It is a story of Spring, from dawn, through night, to dawn again. Nature is personified and every attribute of Spring steps out in glad array. The music is melodious and graceful in lines, not difficult to sing, but worthy of study. The accompaniment affords much opportunity for delicate nuances. The time for performance is about 25 minutes. Be sure to order a copy now while it may be had at the special advance of publication price of 30 cents, postpaid, and you will receive this cantata in ample time to begin rehearsals for the Spring Concert.

The Cross-Patch Fairies A Christmas Play With Music for Little Folks Book by Lida Larrimore Turner Music by Norwood Dale

A new theme for the holiday season. The story is entirely different from any other Christmas play and introduces many pretty situations. The staging may be very simply done or elaborated. *Carol,* in the story, is cross at everything, and so the cross-patch fairies come where they make everyone cross. Of course, there is a happy solution. The ten musical numbers are all most melodious and perfectly suited to the tastes of children. Our advance of publication price for one copy only is 30 cents.

Day Before Yesterday Operetta for Children By Cynthia Dodge

After having had the pleasure of presenting to those interested in children's entertainment material several successful juvenile operettas by Cynthia Dodge, we are delighted to have the privilege of publishing this new musical playlet by the same writer. *Day Before Yesterday* is entertaining as well as instructive, since the participants step back into the characters of years ago. The audience virtually sees the pages of history opened. The well-known characters come to life. The music is very attractive and pleasing, and while it is kept within the limits of children's voices, it will be found charming by hearers. The costumes are fully described and the action is given in directions that are clear and comprehensible. This little operetta will fit very well into an afternoon or evening entertainment given by children performers, the time required being about half an hour. The advance of publication price for one copy of this work is 40 cents, postpaid.

Barbarossa of Barbary A Musical Comedy in Two Acts Music by David Britton

Here is a very clever and entertaining book by Frances Bennett with attractive lyrics that have been well handled musically. A musical director with a group of young people could put this musical comedy on in great style very successfully. There are some very humorous points in this work, and the performers as well as the audience will have a fine time with its production. The title does not give much indication of the plot, in which a U. S. Naval officer and his colored servant get into difficulties with a Greek pirate chief and his renegade band of pirates that infest the Algerian coast. Complications arise when the officer falls in love with the lovely daughter of the pirate chief, but with mirth-provoking incidents a happy ending for all is brought about. There are five male solo parts, two of which are tenors and there are but two girl soloists required, these being soprano. The size of the chorus and the elaborateness of the staging, etc., depend entirely upon the available material at hand. One copy of this work may be secured in advance of publication at the low price of 40 cents, postpaid.

Cleopatra Opera Burlesque of College Life Book and Music By John W. Brigham

Here is one of the most novel offerings we have seen in a long time. Young men's clubs as well as schools and colleges will find it hard to secure anything more entertaining or more mirth-provoking than this. The success of "Cleopatra" will be much greater if all the characters are taken by men, and for that reason it is particularly appropriate for glee clubs or men's community clubs. The time required for production is about 40 minutes, thus it furnishes the necessary fun and diversion for an evening's concert. The story is so absurdly told that it is excruciatingly funny. We know of no other work of this sort, and consider it most fortunate that we are able to present this.

Our advance of publication price for one copy only is 40 cents.

he Promised Child
hristmas Cantata
or Mixed Voices
y R. M. Stults

Mr. Stults has achieved success in his ntributions to the musical part of the urch service because his writings are elodious and not difficult to sing, yet at e same time their rendition can be made ry effective. All of these qualities in r. Stults' writings predominate in this w Christmas cantata. Choir masters ay use this for a special musical service Christmas time, since it requires but out 40 minutes to render and therefore ll fit in with the important parts of e usual church service. The congrega- n will find this an inspiring music con- nplation of the Christmas story. This rk is practically ready, and we expect fill all orders placed in advance of blication before the end of this month that rehearsals upon it can be taken up November. Advance of publication sh price is 30 cents a copy, postpaid.

ne Awakening
Christmas Cantata
or Treble Voices
William Baines

Many choir masters find their road a rd one to travel when it comes to music special occasions, due to the fact that y do not have good male voices at ir command. This cantata will be lcomed by those who are in this posi- n, and it is also an important offering anyone interested in Junior Choirs or oirs of girls' or women's voices. roughout the cantata is scored for prano and alto, and young singers can ily handle the vocal work and where oists are not available for the few parts these can be done readily in son. This makes a most desirable ring in Christmas music and we ommend it to any interested in secur- something worth while in Christmas sic for either church or Sunday school. e advance of publication cash price is cents a copy, and advance orders will filled very quickly, so that this work be taken up in good time for the istmas season.

ie Music Scrap Book
N. Louise Wright

his is a primary instruction book in asing kindergarten style. Young olars will succeed in their first study en it is made so easy and understand- e as in this work. Notation is learned ough the use of rhymed verses, which y be recited or sung. Then the loca- i of the notes upon the keyboard is ght in a similar manner. In logical er other things that the beginner must w, such as the hand position, time, etc., taken up, and the little verses are tinued throughout these lessons. The section of the book gives some short es and a few duets that help the ng beginner to feel that something has n accomplished.

he advance of publication cash price this work that teachers of children will l interesting to know, is 30 cents a y.

verie Album
r the Piano

usic, above all the other arts, more ely links itself with the various moods mankind. There are times when one ld rather pass by the flashy, brilliant e of piano composition and enjoy e of a quiet, dream-like type. There many exceedingly fine numbers of this l, and a careful selection is being le of a goodly number for this Reverie um. There will be many uses to h this album may be put, as music this character is suitable for Sunday ing or at religious meetings where piano is used. Material of this type, ntimated above, is much to be desired one's diversion at the piano. Most he numbers will be in the intermediate les and teachers will find it helpful tilize pieces in this album from time ime with pupils in these grades. This m is a decided bargain at the advance publication cash price of 35 cents a , postpaid.

Jolly Jingles
For Little Fingers
By Helen L. Cramm

We have issued several other books of little teaching pieces by Miss Cramm, and each of these has become popular with many teachers of child music students. It is doubtful if there are any teachers specializing in child beginners that do not know Miss Cramm's *Rhymes and Tunes for Little Pianists.* This new book, *Jolly Jingles for Little Fingers,* is certain to enjoy popularity, as the little pieces in it are charming, having attractive rhythms and melodies, and withal an educational value that will make this collection an outstanding first year teaching book. The advance of publication cash price is 30 cents, postpaid.

Rhythms for Young People
By Blanche Fox Steenman

There is a demand for a book of this kind in view of the great amount of work being done at the present time by private teachers and the public schools for the developing of musical appreciation. A number of the most popular semi-classical piano compositions have been utilized in making this work, and the editing and the annotations have been cared for in a skillful manner. The material in this book does not go beyond a grade of about 2½ and a generous amount of material is presented, but the price is to be a nominal one. For advance of publication orders of this work we have made a price of 50 cents a copy, postpaid. Music teachers in general and school supervisors can be acquainted with this work, and at the same time secure a copy for their personal library at this very low price, if order is made before this work comes off press.

The Fairies' Revelry
Operatic Cantata
For Treble Voices
By Richard Kieserling

This would make a feature part of a program used either as a cantata in concert form or staged in operatic style. If staged the work could be enhanced by the introduction of dancing in solo and ensemble. A cast of young ladies could make a beautiful production along these lines. Girls' seminaries and colleges, high school choruses as well as women's music club choruses will find this a very suitable work to undertake for their concert programs. It gives opportunity for some beautiful and effective chorus work, requiring but about 30 minutes to present. Conductors should make sure of seeing this new work by sending their order at this time for a copy at the special advance price of 30 cents a copy, postpaid.

Little Folks'
Music Story Book
By James Francis Cooke

The child's musical education should not be confined to what can be accomplished upon the instrument studied, as it will add to the child's advancement considerably if attractive points in music are presented. The idea of this work is to present to children in a simple and easily understood manner the history of music. The little tots in the primary grades are often inveigled into the gaining of knowledge through the combination of play with study and work. That is just what this history does, as there are many "cut-out" pictures for the child to paste in the book, and throughout it has been the endeavor to make every little history lesson a real delight. The advance of publication cash price is 50 cents a copy, postpaid.

Musical Moments
For the Pianoforte
By Mrs. H. B. Hudson

Many are familiar with the extremely successful series of study works for little tots by Mrs. Hudson known as the A. B. C. of Piano Music, and we are sure it will please the many enthusiastic users of these works by Mrs. Hudson to see this new book of first grade recreation pieces by the same writer. These numbers are presented in the regular musical notation, and while here and there melodies have been adapted and arranged from various sources, most of the pieces are original writings throughout. Mrs. Hudson's expert knowledge of the kind of material that is interesting to young students is apparent, and it will be found that these pieces will accompany or supplement to advantage any instruction book.

While this work is in preparation, we will accept orders at the advance of publication cash price of 35 cents a copy, postpaid.

Schubert Album
For the Pianoforte

When one feels in the mood to read gems of some literary genius it is a comfort to be able to reach into the bookcase and pull down a volume containing some of the best efforts of that individual writer. It is gratifying to know that pianists are building up similar musical libraries, and the various albums that we have issued in the past, giving in one collection favorite numbers by a well-known composer, have enjoyed a large sale. Not only have pianists and music lovers secured these volumes for their libraries, but numerous teachers have utilized them in teaching purposes when desiring to acquaint their pupils with the writings of some of the individual great composers. We are now preparing a collection of Schubert's favorite numbers. Some of these will be original short piano pieces by Schubert, others will be favorite movements from some of his longer works, and interspersed in the compilation will be transcriptions for the piano of some of the famous Schubert songs. Franz Schubert has written so many wonderful melodies that it will not be difficult, with judicious compiling, to make this an album that will become popular with many. Nothing of extreme difficulty will be included. The advance of publication cash price is 35 cents, postpaid.

Six Study Pieces in Thirds
For the Piano
By Carl Moter

Mr. Moter has made attractive study pieces dealing with an essential department of modern technic. As thirds are found in continual use in piano compositions, it is well to present to pupils in the intermediate grade, study material of this character that will aid the student to become acquainted with all sorts of groupings and fingerings. Individual study works, such as this, enable the discerning teacher to fit the "study prescription" to strengthen noted weaknesses in the technical work of various pupils.

Advance of publication price, postpaid, 25 cents a copy.

Principles of Expression
In Pianoforte Playing
By A. F. Christiani

This book has proved to be one of the best works on the art of piano playing and is highly esteemed by many leading musicians. We are taking over this work and a new edition is being prepared which is opened to the same advance of publication order privileges as other new works added to our catalog. Anyone interested in pianoforte playing, whether teacher, student or professional, will find it profitable to read this book. It perhaps better deserves the right to be designated as an authority on the subject, more so than any book. The advance of publication cash price is $1.50 postpaid.

Vision of Deborah
Cantata for Mixed Voices
By Richard Kieserling

The choir director who most successfully holds the interest of his choir to their work is the one that does not fail to accomplish something even "between seasons." Such choir masters will welcome this musical work based upon the Biblical story of Deborah. The solo work is such as to satisfy the best church singers and throughout the music is excellent with an exotic flavor. Mr. Kieserling has made this an impressive sacred work. The advance of publication price for a single copy is 30 cents, postpaid.

(*Continued on page 722*)

The World of Music

(*Continued from page 657*)

Alexander Saslavsky, for some years a conductor of symphony orchestras in California centers, died in San Francisco on August 2d. A native of Karkoff, Russia, he was a violinist of much talent, at one time concert master, soloist and assistant conductor of the New York Symphony Orchestra, and assisted in the organizing of the Russian Symphony Orchestra.

Aeolian Hall, where during the last decade have appeared many of the world's most famous musical artists and organizations, has been sold, the Aeolian Company retaining, however, the use of the entire great building of which the Hall was a part, until May 1st, 1929.

Wilhelm Furtwangler, successor of Nikisch as the Berlin Philharmonic Orchestra conductor, has been engaged to appear as guest director of the New York Philharmonic Society, this winter.

Eugene Bonner's One-Act Opera, founded on a play, "The Man Who Married a Dumb Wife," by Anatole France, has been accepted for performance during the coming season at the Theater des Champs Elysees—the first American opera to be accepted by one of the larger opera houses of France.

A Bach Verein at Eisenach, the birthplace of the "Great Cantor," has only recently been organized, with the purpose of a Bach Festival each summer. This year the Society of Friends of the Wartburg held a Bach celebration, the famous Thomaner from Leipsig, the choir which Bach at one time directed, furnishing an important part of the program.

The Philharmonic Orchestra of Havana gave its first concert in July, at the National Theater, under the Baton of Pedro San Juan Nortes, the Spanish composer.

Franz Lehar, of "Merry Widow" fame, is reported to be coming to America this season to superintend in New York the presentation of his latest operetta, "Clo-Clo."

Atlanta Civic Opera, modeled after that of St. Louis, is planned for next summer. Miami, Florida, is planning a season of opera for its winter colony; and so the story grows.

Chinese Opera, by a company of Chinese principals, an orchestra playing original Chinese instruments, and under Chinese management, is now being given in Miner's Bowery Theater of New York. The repertoire consists of operas of which the plots are on ancient Chinese historical subjects and of which the music is said to have been written more than a thousand years ago.

A New Italian National Opera House is being built in Rome. It will be a modernized replica of the Paris Opéra, will seat four thousand, cost thirty million lire (seven and a half million dollars), and will be subsidized and controlled by the government.

The Quarto-Centenary of Palestrina's Birth is to be celebrated during the first six months of 1925 by elaborate festivities under the direction of the Royal Academy of Saint Cecilia of Rome.

Verdi's Forgotten Opera, "I Masnadieeri," founded on Schiller's play, "The Robbers," has been found by the librarian of the Budapest Opera House where it was presented in 1853, after being censored by the chief of police because of revolutionary qualities in the text. An early revival is planned.

A Chamber Music Festival was held at Salzburg, August 5-8, by the International Society of Contemporary Music.

Francesco Malipiero has been appointed director of the Liceo Musicale of Florence, to succeed Ildebrando Pizetti, who has become director of the Conservatorio di Milano.

But Three Organists in one hundred and twenty-three years is the record of Lichfield Cathedral, England. Mr. J. B. Lott has but recently resigned after forty-three years of service.

"Cadman Night" at the Hollywood Bowl was celebrated on August 1st. Six of the orchestral compositions of Charles Wakefield Cadman were produced before an audience of seventeen thousand people who applauded vigorously these works of one of our leading Americans.

A New Christmas Service
for Sunday Schools

THE CHRISTMAS STORY
—The Sweetest Ever Told

**Price: Single Copy, 7 cents; Dozen, 80c;
50 Copies, $3.25: 100 Copies, $6.00.**

All Above Prices Postpaid.

A very interesting and melodious service in which all members of the school can join.

THEO. PRESSER CO.
**1710-12-14 Chestnut St.
PHILADELPHIA, PA.**

What to Play—What to Teach
By Harriette Brower

There are many young teachers who will welcome a work of this character and other teachers of experience will find it revivifying to their work to read this book. Miss Brower tells not only "what to teach," but also "what to play," therefore many serious students of the piano will find this is a helpful book to possess, as Miss Brower has described many of the favorite recital and concert pieces and arranged them in program form. We are offering this helpful contribution to literature of music in advance of publication at 75 cents a copy, postpaid.

The Cat Concert
By Russell Snively Gilbert

As will be gathered by the title, this is a unique offering and it will prove interesting to young students, at the same time helping them in the elementary stages of keyboard work. The little piano teaching pieces in this set are well constructed, pretty little tunes running in them. Cats and kittens have always been a delight to children and these pieces gain additional interest because each is characteristic of some fanciful incident built around these favorite pets. Like the primary reading books in school work, these pieces are made easy for young students to read, large notes with good spacing being used in their printing. A copy of this little book may be secured at the advance of publication price of 35 cents a copy, postpaid.

Notturno
A Musical Romance
By Carl Schmidt

There are a limited number of fiction works, utilizing the wonderful possibilities of romances or plots in the musical world, but of the few that exist, Notturno is outstanding. It is a most interesting novel on a musical theme, and many in and out of the musical world have enjoyed reading it. We have secured the publishing rights because we felt that many of our patrons would be interested in possessing this musical novel. We are getting out a new edition upon which we are taking advance of publication orders at the special low price of 80 cents a copy, postpaid.

Music Writing Book
By Anna Heuermann Hamilton

The proofreading and all the preliminary preparatory work upon this book has been completed, but one or two details of the mechanical part of its production remain unfinished, therefore teachers should not delay availing themselves of an opportunity of securing a copy at the low advance of publication price, since it will not be long before it is withdrawn. A number of writing books are to be found upon the market, but we have great faith in the advantages of this writing book which imparts a wealth of necessary knowledge important to those in the elementary stages. Although this is a writing book, this does not mean that it is confined to notation itself, but other important rudimentary branches are treated. Important details in the early study of music are more firmly emphasized by having the students write them down.

The advance of publication cash price is 20 cents, postpaid.

Fiorillo's Studies For the Violin

These studies are among the classics in violin literature and have been universally used to a great extent for nearly 100 years. These studies or caprices for the violin are considered indispensable by many in the training of violinists, and the pupil who thoroughly masters them will have accomplished considerable in the art of playing his chosen instrument. As usual, when adding a widely accepted standard work to the Presser Collection, we are having this work edited in a competent manner with the view to making it the best edition of these studies. In advance of publication, we are accepting orders for these studies at 35 cents a copy, postpaid.

Reflections for Music Students
By Sidney Silber

Mr. Silber's name is well known throughout the musical world, as he is one of the masters in piano pedagogy. Etude readers will remember the interesting and helpful articles by Mr. Silber that appeared in The Etude, and therefore will appreciate the value of a little volume of inspirational paragraphs for the music student by Mr. Silber. There is no doubt but that some of the talks and advices in these "Reflections" will take root in the minds of ambitious students, stirring them on throughout their entire student career. Teachers will do well to have this book about the studio, not only for their own reading at odd moments, but also for profitable reading by pupils when waiting their lesson turns. It should not take a great length of time to produce this book, and therefore the advance of publication term doubtless will be limited. The advance of publication cash price is 50 cents a copy, postpaid.

Ten Busy Fingers
By Mabel Madison Watson

This is a fine set of elementary studies, there being nine altogether, and the rhythms are made clear to the pupils by means of appropriate verse for each study. These pieces enable the teacher to give the elementary student a good idea of rhythm and a better acquaintance with the keyboard of the piano, since they do not remain in the middle of the keyboard as is so often found in elementary material. These studies work backward and forward along the keyboard, giving each hand at some time or other an opportunity to play in the treble as well as the bass clef.

The advance of publication cash price for this elementary study work is 25 cents a copy, postpaid.

In Advance of Publication Offers Withdrawn

We are pleased to announce that a number of works are now ready for delivery, presenting to the music world some new works for use early in the 1924-25 season. Advance of publication offers on all these works are withdrawn. We suggest that any who have not secured these works in advance of publication and are interested in any or all, order copies for examination. We are giving below short descriptive paragraphs of the five works withdrawn.

Album of Scales

This is the second volume in the series of Study Pieces for Special Purposes. The Album of Trills has been found very useful by teachers, and we are sure this Album of Scales will enjoy equal success. It contains 23 attractive pieces in which the composers have utilized the scales and variations of them. Pupils in the early third grade can accomplish much in scale work with this attractive material. The price of this is 75 cents.

Tunes for Tiny Tots, by John M. Williams.

This is a little preparatory book for little piano students, and while it will not supplant the usual instruction book, it makes a very attractive preparatory work to any beginners' book or method. It teaches the rudiments of music, using the bass and treble clefs from the start. The price of this work is 75 cents.

Basic Principles in Pianoforte Playing By Josef Lhévinne.

A little volume giving a series of personal conferences with Mr. Lhévinne on the art of piano playing that was published over some months in The Etude. The whole subject is presented so well that it is only proper for that material to be preserved in this form for use by teachers and serious students of the piano. The price is 60 cents.

Glee Club Songs for High School and College, by Hollis Dann and W. L. Wood.

In its entirety this is not a new compilation, but in taking this work over from another publisher some new material has been added and some of the old eliminated, making an up-to-date volume for the purposes indicated by the title. The price of our copy is 90 cents.

Pageant of Flowers.—Operetta for Children, by Richard Kountz.

Text and lyrics of this operetta or pageant are by Elsie C. Baker, and they have been set with sparkling style. Full instructions are given for the presentation of this pageant which is very suitable for school entertainments. The price is 40 cents.

Six Study Pieces for the Development of the Wrist.—By Carl Moter.

A set of melodious study pieces, not at all difficult. They may be taken up by any student who has finished the second or third year of study. Their use will be an excellent preparation for bravura study. The price of this work is 80 cents.

Renewal Time

This is the season when most Etude subscriptions expire. Don't forget to renew. We endeavor to give our readers ample notice when time for renewal arrives. Some subscribers, however, forget and delay, with the result that Etude service is interrupted. So don't procrastinate. The cost of renewal is only $2.00 for one year, $3.50 for two years. (The two-year price permits of a substantial saving.) Three minutes at your desk with your complete name and address and $2.00 means that you are "all fixed" for next year. It promises to be the best Etude year we have ever planned.

Cut Rate Magazine Prices

See the display advertisement on the inside back cover of this number. It means that you can order magazines now at a substantial saving. This special low price offer expires November 10th. Let your orders come forward promptly and save money. Each magazine selected to club with The Etude is vouched for by us as being the best in its class. Magazines make mighty acceptable holiday gifts. Of course, you can order them later if you wish, but why not place the order now to begin with the December number and we will see that the subscription starts promptly in time for the holidays. An attractive gift notice giving the name of the donor will accompany each subscription where it is requested.

Premium Workers Attention!

Send for the new premium catalog listing many new, attractive and serviceable gifts. Many workers provide their entire circle of friends on their gift list with selections from our catalog. The time to begin sending subscriptions is now. If you do not wish to make your selection at once, just forward the name and address of the music lover with your personal check for $2.00. We will enter the subscription and give you credit on our books, then, later on, you can make your selection from the catalog. A post card will bring one of the new premium booklets as soon as it is off the press, which will be about October 10th.

Change of Address

Remember that in changing addresses it is absolutely necessary to advise us promptly, giving both the old address and the new. Magazines are mailed under second-class rate and the post office will not forward any magazine even though a change of address is left with the postmaster. Careful attention to this memorandum will save needless trouble, inconvenience and expense.

Warning!

The time is ripe for the annual crop of complaints that money has been paid to a swindler. *Be careful* to pay money only to those personally known to you. If in doubt, place the subscription and send the money direct to us. We will give the agent credit if he is entitled to it. We cannot be responsible for money paid to any but a duly accredited representative carrying our official receipt.

SPECIAL NOTICES AND ANNOUNCEMENTS

PERSONAL, FOR SALE or WANTED
Rate 10c per word

FOR SALE—Progressive Series of Piano Lessons complete with music. (Mrs.) Ruth Wenzel, 807 Grant Blvd., Milwaukee, Wisc.

THE BOOK MANY TEACHERS REQUESTED FOR PUPILS COMPLETING

The Immensely Popular

"HARMONY BOOK FOR BEGINNERS"

Preston Ware Orem

THEORY AND COMPOSITION OF MUSIC

By PRESTON WARE OREM

Price, $1.25

The author gave considerable thought to the preparation of this book and the result is a work that surpasses all others on the same subjects. It is a modern, easily understood guide for the practical application of harmony to composition. There is no better work for the student who has mastered the elements of harmony. The subject is truly made a fascinating one in this book.

UNISON, TWO, THREE
THE WITMARK SCHOOL EDITION
AND FOUR PART SONGS
SACRED SECULAR

One of the best known authorities on School Music recently said:-

"The average school boy and girl likes the new ballads and popular songs of the day. While the supervisor does not encourage the taste for music of little educational value, there is a certain middle ground between the classics and so-called popular songs in which will be found much excellent material that meets the requirements of the schools for study purposes, and at the same time answers a decided yearning of the young people for lighter, melodious harmonies. The following numbers have been carefully selected from an extensive line of modern song successes, and the list is suggested as particularly desirable for school use."

TREBLE VOICES—UNISON AND TWO-PART SONGS

*THOSE MARKED WITH * ALSO PUBLISHED FOR THREE-PART*

OCTAVO MUSIC SENT ON APPROVAL

M. WITMARK & SONS, Dept. 48—1650 Broadway, New York

A System of Harmony

By John A. Broekhoven **Flexible Cloth, Price, $1.00**

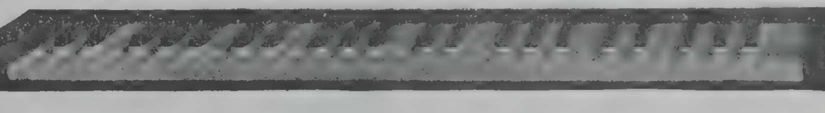
A Harmony Work with Many Individual Points

Broekhoven's Harmony contains many features of special value and information to teachers and students not found in the average book on harmony. Among these are: The short and clear sections numbered for the purpose of ready reference. The questions after each chapter. The explanations of musical examples. The use of the term **Sept chord** for the confusing term **chord of the seventh** found in all books on harmony. The free resolution of collateral Sept chords. The explanation of altered chords. The chord analysis of the six-key group. The presentation of the various phases of suspensions, retardations and anticipations. The exhaustive illustrations of modern modulation. The harmonization of a melody in the soprano, alto, tenor and bass. Four, three and two-part writing. Examples of simple counterpoint and mixed counterpoint. The harmonization of a choral in four, three and parts. Omnitonic harmony, and the application of chromatic chords. This complex of subject matter gives Broekhoven's Harmony a broader scope of material for musical composition than found in the current works on harmony. The complete index of the subjects treated given at the end of the book is an encyclopedia of musical elements most valuable for reference.

THEO. PRESSER CO. 1710-1712-1714 Chestnut St. **Philadelphia, Pa.**

THE WILDER IMPROVED KEYBOARD

"That we are on the eve of a great 'swing' to ***Piano Class Instruction*** there can be no doubt, and in this ***'New Way'*** the Wilder Keyboard is sure to play a most important part."



To-day's progressive Teachers and Students, through their vision and initiative, will inevitably be the leaders in the "New Way."

A postcard will bring you interesting and convincing reasons.

JUNIOR ETUDE

CONDUCTED BY ELIZABETH A. GEST

The Harebells' Tune

e harebells played a pretty tune
Jpon the mountain top,
d all the little fairies
3egan to hop and hop.

e wind blew over them so soft,
The moon white shadows made,
d all the little fairies
Came dancing down the glade.

d on and on and on they danced
While harebells played the tune.
d then at dawn they skipped away
For daylight came too soon.

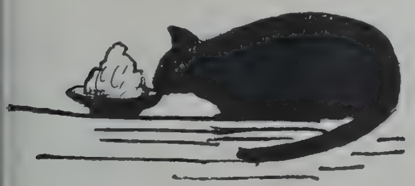
1 sorry that the fairies
All disappear from view
d harebell music ceases
When daytime comes. Aren't you?

Musical Appreciation

By Edna M. Schroeer

THIS is a story of Happy-Cat, our little low kitty with the big ears. One night ther and Daddy and Happy-Cat and I re listening to some new records and ppy-Cat was curled up on my lap asleep. were talking about musical apprecia- 1.

"Just what do we mean by musical preciation, Daddy?" I asked. Daddy ked puzzled for a moment. Then he on a new record of a beautiful soprano ng. The music had barely started when ppy-Cat woke up, perked up his ears d jumped right off my lap. He walked around the machine, and we watched n, as he seemed to be hunting something. d then what do you think he did? He his little feet up on the machine and ped in and tried to crawl inside. When found that he could not crawl in he ned and gave us an appealing look, as ich as to say "Please put me in there. I e the sound of that."



Picking little kitty up Daddy said lappy-Cat has answered your question, ughter. When you reach the point here you can't get close enough to music, d can't possibly hear enough of it or amine it too much, then you really preciate it."

So we took Happy-Cat and gave him me ice cream, feeling that nothing but cream was good enough for a kitty th such musical appreciation.

Intelligent Practice

By Marion Benson Matthews

BETTY sat down at the piano, placed her music on the rack, and began to play. It was a new piece, and Betty felt that she was doing very well with it. She played it through, and then waited for the comments of Miss Brown, her teacher.

Miss Brown looked at her gravely for a moment.

"Betty," she said, "I'm afraid you have put very little practice into that piece."

Betty was surprised, and a little hurt.

"Why, Miss Brown!" she exclaimed; "I have practiced surely an hour a day on it. I thought I was able to play it well."

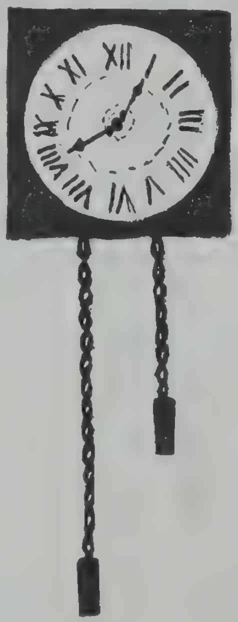
"You played the notes correctly, but—oh, how I should like to re-write some of the old proverbs!" broke off Miss Brown.

Betty looked at her teacher in amazement. What had old proverbs to do with her piece?

"I was thinking of the old saying, 'Practice makes perfect,'" explained Miss Brown. "I should like to add one word to it, to make it read, '*Intelligent* practice makes perfect.' You have practiced, as you say, an hour a day on this particular piece. At the beginning the composer has written the words *Andante grazioso;* yet you played very fast, as if you were in a great hurry to have it over and done with. You have studied musical terms long enough to know what *andante grazioso* means; have you not Betty?"

"I know it means the piece should be played slowly and gracefully," answered Betty, flushing. "Miss Brown, I am so stupid—I didn't pay any attention to the directions."

"No, you are not stupid," said Miss Brown; "but you are thoughtless. Unthinking practice is as bad as none at all. Oh, if you children only would understand that a few minutes of thoughtful, intelligent practice are worth hours of mechanical, careless practice! Of course, I am pleased when you tell me you have practiced a great deal—when I see that you have put thought and care into your work."



"Miss Brown," exclaimed Betty, "I shall remember that, and I'm going to show you in my next lesson that I *can* practice with thought and care!"

Dolly's Accent

By Olga C. Moore

"OH, this old piece!" pouted Dolly, fretfully; "I just can't get it right!"

"Which piece is it, Dear?" asked her mother.

"*Spring Morning*, in my second Mathews book," answered Dolly. "Mrs. M.— said if I played it well I would imagine I heard birds twittering in the little triplets in the treble, and this bass at the beginning would remind me of boys playing football."

Dolly's mother, who was a very fine musician, came up to the piano and sat down beside the disgusted little girl. She knew all about the troubles little girls have who play too fast and try to play at once with both hands together; so she said, "That ought to be a very interesting piece to work on. Let us try again and see if we can play it. How did Mrs. M.— tell you to practice this?"

"Oh," responded Dolly, feeling better. "She said to play each hand alone a great many times, counting every measure; for the treble and bass do different things. But, Mother, it takes up so much time, playing it separately; and I want to hear how it goes!"

"Yes," said Mother, thoughtfully (for even mothers do have to *think* before they tell little girls some things), "it does seem to take longer; but it is so much easier to watch one hand than two, and count at the same time. So you really waste time when hurrying to put it together before first thinking it out separately. You know, the saying, 'How does the little busy bee *improve* each shining hour?' Well, you can improve your *minutes*, dear, by doing *well*, only a little at a time, like the little busy bee. Now tell me on which beat your piece begins, in the treble?"

"Let's see," puzzled Dolly, thinking it over. "I must count six eighths in each measure, so that triplet comes in on '6.'"

"That is right. Now, how will you play the triplet on the sixth count; with an accent or without?"

"Oh, Mother, you must never accent on the sixth count," laughed Dolly.

"I'll accent '1' in the next measure and a little on '4.'"

"Very well, play that much for me and count aloud."

Dolly did read notes very nicely when she played slowly. She began sweetly on the triplet and accented the next quarter note, saying softly then suddenly loud, "'6,' ONE, two, three, FOUR, five six," playing the following staccato notes just as they were written. Once she got the idea, it was easy sailing, repeating the little pattern every time it came along.

"That sounds like a little musician playing," said Mother. "Now take the bass of just this first part. Your eighth note is held over to the next note which is staccato. When you play that staccato note on the accented beat, lift your finger high and *aim* at the key, then spring off. See what a nicely accented tone you can get?"

"Why, Mother," exclaimed Dolly, "that is just what Mrs. M.— told me to do—to aim for the tone by lifting the finger—and she says to strike firmly, too."

"Yes, I am satisfied your teacher tells you these things; but you must remember them and take her advice by practicing carefully."

Musical Terms (No. 10)

(Continued)

Perdendosi—gradually dying away in tone and speed.
Pesante—Heavy, ponderous.
Phrase—an incomplete musical sentence.
Piacere—at the performer's pleasure.
Piano—softly.
Pianissimo—extremely soft.
Pitch—the place of a tone in regard to high or low.
Piu—more.
Pizzicato—plucking the string with the fingers (referring to violin).
Poco—a little.
Poco a poco—little by little, gradually.

Question Box

DEAR JUNIOR ETUDE:

How do you pronounce the name of the great pianist, Sergei Rachmaninoff?—H. S. B. (Age 15), Ohio.

Answer.—Pronounce Serg to rhyme with dirge, ei as eye. Rach as Rack, man, ee, noff. Accent on the ee.

Please Do!

Some people,
When they sing a song,
Mumble every word;
So, when you sing,
Speak clearly, please,
Mumbling, is absurd.

JUNIOR ETUDE—Continued

Junior Etude Contest

The Junior Etude will award three pretty prizes each month for the best and neatest original essay or story and answers to puzzles.

Subject for essay or story this month, "The Study of Harmony." Must contain not over one hundred and fifty words. Any boy or girl may compete whether a subscriber or not.

All contributions must be received at the Junior Etude Office, 1712 Chestnut St., Philadelphia, Pa., before October 20, 1924. Names of prize-winners and their contributions will be published in the January, 1925, issue.

Put your name and age on upper left corner of paper, and address on upper right corner of paper. If your contribution takes more than one sheet of paper do this on each sheet.

Do not use typewriters.

Competitors who do not comply with ALL of the above conditions will not be considered.

(When schools or clubs are competing, please have a preliminary contest first, and send only the five best to the Junior Etude contest.)

MUSIC AND RADIO
(Prize Winner)

Music and the radio brings to my mind my own experience when I played for a broadcasting station. As I took my place at the piano my selection was announced. A thrill ran through my body as I pictured hundreds of men, women and children seated at the radios listening in, among them my relatives and friends. I made a firm resolve to do my best, so that those who were listening in might receive some enjoyment from my playing. I tried to put into my music the emotions I felt. With only a turn of the knob they could get the jazziest kind of music, and I did not want them to turn off my piece and get jazz. Let us always make our playing so appealing that the audience will not wish to hear anything else instead.

Eleanor Morrow (Age 14),
Ohio.

Honorable Mention for Music and Radio Essays in April

Witten Yost, Mamie Pittman, Laura Jean Barnett, Jean Moseley Robertson, Nellie Caraher, Edna Ardoom, Margaret L. Voetter, Margaret Wait, Margaret Messmet, Ruth Wendemuth, Naldine Bufkin, Mildred Onieta Hahn, Eleanor L. Griswold, Margaret Platt, Gladys Foreman, Blanch Sheffield, Mary Priest, Marie Binder, Catherine Redmond, Marian Hayes, Dorothy Pollock, Ruth Smith, Phila Johnson, Doris Deardorff, Garnet Nihart, Philora Schuster, Alice Louise Smith, Velma Tobin, Dorothy M. Simon, Marie Jones, Wilma Rigby, Hazen Bradstreet Bee, Frieda Sloop, Geraldine Ahern, Kathryn Hart, Ethel Karrick, Frances Fusfield, Madeline Boos, Bertha M. Weeth, Margaret M. Mace, Doris M. Evans, Cecile N. Hindelong, Katherine E. Dealy, John Schmitz, Theodore Ochs, Rose Connelly, Ralph Goetz, Herbert Schuller, Elizabeth Hill, Virginia Meyer, Laurence Quill, Dorothy Logan, Irene Urbaniak.

Puzzle

Instead of answering a puzzle this month, send in an original one relating to music. Follow the regular "contest" rules. The best three will receive prizes.

Answer to Concealed Terms Puzzle in April

1, Count; 2, Measure; 3, Beat; 4, Flat; 5, Staff; 6, Key; 7, Rest; 8, Clef; 9, Bar; 10, Sonata; 11, Baton; 12, Note; 13, Time; 14, Alto; 15, Tone.

Prize winners—Hannah Klein (Age 14) New York. Olive Chase (Age 14) Vermont. Rodolphe Lefebvre (Age 15), Canada.

This seems to have been a comparatively easy puzzle and a great many correct answers were received, though not all were neat! The neatest and best work was from J. A. Landry, Adrien Lapointa, Nina Barnes, Jeanne Smith, Ralph A. Hallenbeck, Edith Glover, Tillie Cohen, Ruth B. Jilson, Elizabeth Vassil, Betty Sullivan, C. Giguere, J. M. Collins, Dianna Ellis, Lois Mason, Mildred DeWolf, Vera Quirt, Violet Patton, Betty M. Ross, Roslyn Roth, Doris M. Evans, Ralph Goetz, Ellen Timmons, Grace Fenton, Marjorie Kennel, Georgetta Wilson, Phyllis Walker, Louise Brull, Vivienne Pilotte, Marjorie Pilotte, Daisy Johnson, Sylvia Broering, Clara Laurence, Harriet G. Isham, Eleanor Morrow, Maldine Bufkin, Frances Waken, Euginie Torkelson, Elinor Schriver, Harriet Magee Walton, Marie Todd, Mildred McIntire, Anne Walton, Elizabeth Hill, Natalie Pokorski, Mary Elizabeth Doherty, Auriette Louise Losier, Dorothy E. Canna, Lionel Nowak, Mildred Callahan, Mamie Pittman, Dorothy Day, Marie Jones, Marie Anita Ingram, Mary Dobelm, Francis Collin, Pauline Plumstead, Grace Finney, Oinia R. Martin, Helen Newell, Elizabeth W. Emory, Victoria Rasmussen, Florence Leiter, Gwendolyn Duggan, Floriene Goldeen, Mildred Knabe, Paul Belanger, Ruth Cacek.

MUSIC AND RADIO
(Prize Winner)

The radio is a very great help to music lovers in this country. It enables many of us who are too far away from the cities to get any benefit from the concerts of great artists to enjoy these concerts in our homes. Even though we do not see the artists and their methods of playing, we learn to train our ears to the best music, and we also learn to appreciate more the beautiful pieces which we were not able to hear before the radio came. Music over the radio may also be used as amusement to those who are sick. So in many ways the radio is helping to spread the gospel of good music through our country.

Elsie Weston (Age 14),
Michigan.

MUSIC AND RADIO
(Prize Winner)

Over the radio we hear church music, pipe organ music, singers of high renown, wonderful musicians and music from large orchestras. The radio enables many to hear good music when they otherwise could not hear it. It is creating a new interest in music. Most people enjoy some kind of music and are glad to listen to it. The public in general is turning to better music and is leaving the jazz and popular music behind. A real treat to people in the country or in small towns is hearing good music on the radio. The people who furnish this music are musicians who have had excellent training and great experience in concert work, so we know that the music is coming from the best sources.

Irene Zercher (Age 14),
Texas.

SIGHT READING
MADE EASY FOR PIANISTS

PIANISTS can become perfect sight readers by studying my course on "The Art of Sight Reading." Sight reading is not a "gift" and is within the reach of all pianists—beginners and advanced. It tells you of the difficulties of sight reading and how overcome—method of reading and practice—faults made and how rectified—how to play accompaniments at sight—etc.

Satisfaction Guaranteed or Refund made
DANFORD HALL 1352 Foster Avenue CHICAGO

The Most Popular of All Modern Instruction Works for the Pianoforte

SCHOOL FOR THE PIANOFORTE
By THEO. PRESSER
IN THREE VOLUMES
Vol. I—Beginner's Book
Vol. II—Student's Book
Vol. III—Player's Book
Price, $1.00 each

BEGINNER'S BOOK
SCHOOL FOR THE PIANOFORTE—VOL. ONE
Used More Extensively than any other Elementary Instructor for the Piano
The simplicity of this work has enabled many teachers to achieve speedy results with even the youngest beginners. This is a "first reader" in piano study. The whole work is bright and interesting.
"Beginner's Book" makes an Excellent Introduction to any Course or System of Piano Study. "Beginner's Book" is the Instruction Book with the Red Cover that is familiar to Thousands of Pupils and Teachers.

STUDENT'S BOOK
SCHOOL FOR THE PIANOFORTE—VOL. TWO
A Work that Aids the Pupil to Progress because it Presents Interesting Material that the Teacher can Use Successfully
Takes up the subject just where the "Beginner's Book" leaves off, and is, of course, intended to supplement that excellent instructor, but it can be used very successfully for any student who has done the work of the first grade, up to, but not including the scales.

PLAYER'S BOOK
SCHOOL FOR THE PIANOFORTE—VOL. THREE
A Superb Offering for the Instruction of Progressing Young Players in the Various Phases of Piano Technic
Pleasing study material arranged in progressive order, treating somewhat in detail trills, octaves, two notes against three, the pedal and other matters necessary to technic. Memory study and ear training are specially stressed.

Teachers may secure any of these volumes for examination.
These volumes are sold by leading music dealers everywhere.

"A SKIN YOU LOVE TO TOUCH," BY T. K. HANNA

"Science and everyday experience teach that a beautiful skin does not depend on youth"

How long can a woman keep the charm of *"A skin you love to Touch"*?

AT TWENTY—is a woman's skin always fresh and fair?

At thirty—must it begin to fade?

In romance—yes. But not in actual life.

Science and the woman of forty

Science and everyday experience teach that a beautiful skin does not depend on youth.

A woman of forty may have a fresh, clear, dazzling complexion. A girl of twenty may have a skin that is dull and sallow, disfigured by blackheads or ugly little blemishes.

Give your skin daily the right treatment, and you can keep it smooth, clear, flawless, long after youth is passed. For your skin never loses its power to respond. Each day it changes—old skin dies and new takes its place. This new skin you can make what you will.

Daily care is essential

Find the special treatment that your skin needs in the booklet of famous skin treatments wrapped around every cake of Woodbury's Facial Soap. Make this treatment a daily habit!

Before long you will notice a wonderful improvement in the whole tone of your complexion.

A 25-cent cake of Woodbury's Facial Soap lasts a month or six weeks. Or you can get it in convenient 3-cake boxes. Get your Woodbury's today!

For ten cents—a guest-size set of three famous Woodbury skin preparations!

THE ANDREW JERGENS CO.
5610 Spring Grove Ave., Cincinnati, Ohio

For the enclosed 10 cents—Please send me your miniature set of the Woodbury skin preparations, containing:

A trial-size cake of Woodbury's Facial Soap
A sample tube of Woodbury's Facial Cream
A sample box of Woodbury's Facial Powder
Together with the treatment booklet, "A Skin You Love to Touch."

If you live in Canada, address The Andrew Jergens Co., Limited, 5610 Sherbrooke St., Perth, Ontario. *English Agents:* H. C. Quelch & Co., 4 Ludgate Square, London, E. C. 4.

An Important New Work

THEORY AND COMPOSITION OF MUSIC

By PRESTON WARE OREM

The Logical Sequel to His Immensely Successful "Harmony Book for Beginners"

Thousands of teachers and self-help students who have used "Orem's Harmony" requested a book with which they could continue in this pleasant and profitable method. The result of their demands is this excellent work. The student is led immediately into creative work, making practical application of all knowledge gained, meanwhile learning everything that the ordinary course in harmony gives, including modulation and a good working knowledge of musical form.

PRICE, $1.25

BASIC PRINCIPLES IN PIANOFORTE PLAYING

By Josef Lhévinne **PRICE, 60 CENTS**

Josef Lhévinne, one of the greatest authorities of the present day upon pianoforte technic and interpretation presents in this volume some vital principles that should be studied by every teacher and student. The whole subject is presented in a clear, simple manner and a careful following of the advice given should bring beauty and charm to one's playing.

ALBUM OF SCALES

Study Pieces for Special Purposes Vol. 2

PRICE, 75 CENTS

This is the second volume published in the new series Study Pieces for Special Purposes. The first volume, *Album of Trills,* was an immediate success and has been adopted by many teachers who recognize the superior value of interesting study pieces over dry, technical exercises. The pieces in this album are all calculated to give the student plenty of scale work, at the same time furnishing through their musical qualities an incentive for the student to practice.

PAGEANT OF FLOWERS

Operetta for Children

Text and Lyrics by Elsie C. Baker
Music by Richard Kountz

Pageants are in great demand, especially in the grade schools, and the available material from which to select is quite meager. This work, therefore, will be welcomed by teachers and supervisors as filling a long felt need. It is built upon a beautiful theme and points a strong moral. The music is charming and will prove a source of keen delight.

PRICE, 40 CENTS

THE FAIRIES' REVELRY

Operatic Cantata for Soprano Solo and Three-Part Chorus of Treble Voices

By Richard Kieserling

With the addition of a few dances, solo and ensemble, a most attractive dramatic performance may be given of this work. However, it may be presented simply as a cantata, its musical worth making this feasible. Music clubs and young ladies' schools and colleges will find this a very interesting vehicle.

PRICE, 0 CENTS

To those seeking music publications of any type we will be glad to send helpful catalogs upon request.

THEO. PRESSER CO., ***Music Publishers and Dealers,*** **PHILADELPHIA, PA.**

SUBSCRIPTION PRICE, $2.00 per year in the United States and Possessions, Argentine, Bolivia, Brazil, Columbia, Costa Rica, Cuba, Dominican Republic, Ecuador, El Salvador, Guatemala, Mexico, Nicaragua, Paraguay, Republic of Honduras, Spain including Balearic Islands, Canary Islands and Possessions in North Africa (Ceuta, Melilla and Tangier) Peru and Uruguay. The World of Music

Felix Weingartner is reported to have made arrangements to visit America during the season of 1926-1927. He recently resigned his position as Director of the Volksoper of Vienna and is now conductor of the Vienna Philharmonic Orchestra and guest conductor of the London Symphony Orchestra.

"Silent Night, Holy Night (Stille Nacht, Helige Nacht)" was written one hundred years ago, tradition telling that the words were written by Pastor Mohr and the music by Gruber, a school teacher, both of Oberndorf near Salzburg; and the little village has recently celebrated this centenary.

Octavia De Louis, granddaughter of Chief Keokuk of the Sacs and Foxes, has taught music in Des Moines, Iowa, for fifty-three years. She was born in 1847, in Keokuk, named for her royal grandfather.

La Scala and Paris Opera companies are reported to be negotiating for "exchange seasons" next spring. Catholicity in art which some American organizations might do well to emulate.

Brazil's New Copyright Laws, recently enacted, are designed to protect particularly the musical works of foreign composers, and especially those of the United States. Unauthorized public performance of any musical composition, tragedy, drama, comedy or other production copyrighted in Brazil may be enjoined and the gross revenue of such performance or representation may be seized by the owner of the copyright.

The National Association of Piano Tuners met for their fiftieth annual convention, at Hotel Wisconson, Milwaukee, August 11-13. A record in enthusiastic attendance is reported, and Charles A. Deutschmann was re-elected as president.

A Piano Factory near Shanghai is manned entirely by Chinese and turns out about six hundred instruments per year, every part of which is made entirely by hand.

Mme. Saint-Saëns, widow of the celebrated composer, has failed in her effort to secure half of the royalties of his works, which amount to 10,000,000 francs (about $2,000,000 at normal exchange). She had been separated from her husband for many years, and the court refused her claim.

Turkish Women are to be permitted to appear on the stage, is the last report. The Government has granted this privilege, where hitherto the Moslem religion strictly forbade women from showing themselves to any man other than members of their family.

The Wagner-Mozart Opera Festival at Munich, August 1 to September 9, is reported to have been a genuine success. Singers well known in America interpreted many of the leading rôles.

A New Transmission Device for Telephones, in Munich, is said to surpass the radio for transmitting opera. The initial experiment with "Die Walküre" justified the claim that this type of broadcasting could be done without interfering noises.

Eugene Bonner's One-Act Opera, "Celui qui Epousa une Femme Mutte (The Man Who Married a Dumb Wife)" will be produced at the Théâtre des Champs Elysées of Paris during the coming season. This is said to be the first American opera to be presented in a Paris theater.

The Bayreuth Festival, resumed this summer for the first time since the outbreak of the World War, is announced by Siegfried Wagner to have had a financial success, warranting future pay for the singers who heretofore have given their services in the cause of art.

Gatti-Casazza, in the name of the Metropolitan Opera House of New York, has sent a gift of one thousand dollars to the Verdi Association and five thousand dollars to the "House of Rest," founded at Milan, by Verdi, for aged musicians. This makes a total of one hundred and forty thousand dollars which the Metropolitan management has sent to this worthy institution.

The Fisk Jubilee Singers, of Fisk University, Nashville, Tennessee, recently sang before King George at Buckingham Palace, and as mementoes of their appearance Queen Mary presented to them a portrait and other souvenirs of the King's grandmother, Queen Victoria, to become the property of their alma mater. The original Fisk Jubilee Singers sang their Negro Spirituals and Plantation Songs before Queen Victoria on their first world tour in the early seventies and again in 1884.

G. W. Armstrong, Jr., for many years the President of the Baldwin Piano Company, recently celebrated the fiftieth anniversary of his connection with that business. Along with doing much towards the promotion of the interests of the Baldwin Company, Mr. Armstrong has been very active in promoting the civic and musical interests of Cincinnati.

Concerts on Scheduled Time in New York is the plan of the National Music Managers' Association. So far as is humanly possible they purpose adhering to this practice, if those attending will but lend their help by being in their seats on time.

"Carmen" broke all records for popular-priced opera at the Municipal Theater of St. Louis, when the first seven performances recently given drew $36,869 to the box office, compared to the previous record of $36,007 for seven presentations of the "Merry Widow" in 1923.

Ernest Newman, the eminent music critic of the London *Sunday Times,* and a widely known writer on musical topics, is soon to arrive in New York to supervise the publication of an American edition of his works. It is rumored that he may succeed, at least temporarily, to Henry T. Finck's former position as music critic of the New York *Evening Post.*

Carnegie Hall, of New York, which was recently reported about to be demolished, is to meet no such immediate fate, if at all, according to statements of its managers.

John Alden Carpenter's new ballet, as yet unnamed, is to be produced at Monte Carlo about March 1, by the Diaghilief Russian Ballet, according to report. This American composer's ballets, "Birthday of the Infanta" and "Krazy Kat" have already had successful productions in the States.

The Oldest American Organist, in point of service, may still be "undiscovered." Our note in the July "World of Music" has brought us the information that Eben H. Bailey, of Ipswich, Massachusetts, has been continuously a church organist for sixty-four years and that William B. Trott, of Washington, D. C., has performed a similar service for sixty-nine years.

Bush Conservatory of Music and the Lyceum Arts Conservatory, of Chicago, have been merged under the joint management of the former owners of the two institutions.

The Music Teachers' National Association will hold its 1924 Convention at St. Louis, December 29, 30, 31. A program of great interest is promised, with speakers of national and international reputation, among whom are Edgar Stillman Kelley of Oxford, Ohio; Albert A. Stanley, Professor-Emeritus of Ann Arbor, Michigan; Ernst C. Krohn of St. Louis, Missouri and Dr. Abraham Z. Idelsohn, Professor of Jewish Music, Hebrew Union College, Cincinnati, Ohio.

An Imperial Opera House in London is proposed, the funds to be raised among one million shareholders at one pound each. Isadore de Lara, composer of the successful opera, "The Three Musketeers," is in the lead of the movement. The theater is to seat four thousand people, with good seats at from one to five shillings. It is hoped to raise an extra million pounds as an endowment fund.

Mascagni is reported to be engaged on the composition of a new opera based on Henri Cain's play, "Plus que Reine (More than Queen)" with the Empress Josephine as the inspiration of the leading rôle.

The "Eroica House," 92 Doblinger Hauptstrasse, Vienna, has been acquired by the municipality, with the purpose of converting it into a Beethoven Museum.

One Theater for Every 32,000 Inhabitants of Paris, one for every 81,000 of Berlin, one for every 130,000 of Vienna, and one for every 145,000 of London is the report of the *Musical News and Herald.*

The Prize of Five Thousand Lire (about one thousand dollars) offered by the Lega Musicale Italiana of New York, for an Orchestral Suite, has been awarded to Lodovico Rocca of Turin, for his suite in four movements, entitled "Chiaroscuri."

Boito's "Nerone" is to be taken on a tour of the leading Italian cities, by the La Scala management, during the earlier part of the coming season.

A "Lotta Educational Fund," provided in the will of the late Lotta Crabtree of Boston, the eminent actress of a past generation, is set aside from her estate, the income to be divided annually among four students of the New England Conservatory who are in need of financial help toward their education. Lotta's whole estate was valued at $4,000,000.

Texas Auditoriums are to have two notable additions. San Antonio will soon have a new Municipal building at a cost of $700,000 and seating six thousand; and in Dallas the Fair Park Auditorium will seat five thousand in a building at an expense of $500,000.

One of Richard Wagner's Battered Batons, used when he conducted a concert of his works at the Royal Albert Hall of London in 1877, was recently brought into use again when Susan Spain-Dunk made her London debut as a conductor in the same hall.

Remigio Rinzi, first organist to the Pope at St. Peter's in Rome, has been visiting relatives in Chicago and while there was heard in several recitals.

Mignon Nevada, daughter of Emma Nevada, who was among the first of our native singers to achieve international fame in opera, is engaged for the season at the Théâtre des Champs-Elysées of Paris, where, among other parts, she will create the title rôle of Rimsky-Korsakoff's "Snegoroutchka (Snow-Maiden)" at its Paris premiere.

Herbert Wilber Greene, prominent vocal teacher of New York and Philadelphia, died September 25th. He was born in 1851 at Holyoke, Massachusetts, and was educated in New York, London and Paris. In 1885 he helped to found the Metropolitan College of Music in New York, and since 1900 has conducted the Summer School of Singing at Brookfield Center, Connecticut. In 1897-8 he was president of the Music Teacher's National Association and held the same position in the National Association of Teachers of Singing in 1909-10 He had been long a valued contributor to The Etude and edited *The Standard Graded Course of Singing,* which has been widely used.

A Ten Thousand Dollar Organ is to be installed in the auditorium of the Teachers' College at Pittsburg, Kansas, the funds coming from the profits of the cafeteria conducted by the Domestic Science Department of the institution The organ idea was suggested by, and had the unanimous support of, the student council.

An Amateur Symphony Orchestra is being organized by the Educational Alliance of New York. Complete training in ensemble and orchestra routine, under competent leaders, will be furnished semi-professional and advanced amateur musicians, and this without fees of any nature.

Five Orchestras, with twelve different conductors, appearing in one hundred and eighty concerts, will be a part of the musical fare offered for the digestion of the New York public during the coming season.

In the Municipal Pawn Office (Monte di Pietà) register at Venice is an interesting entry in December, 1859: a watch, a snuff-box, and a sweet-box, all of gold, pawned by Richard Wagner, musician. Wagner lived there at the time, spending rather more than he could afford.

A Prize of One Hundred Dollars, for the best composition for Women's voices, is offered by the Rubinstein Club of Washington, D. C. Complete information may be secured from Mrs. Harvey I. Rabbitt, 312 Cathedral Mansions, Center, Washington, D. C.

The Order of the Crown of Italy has been conferred by the Italian government, upon Samuel Insull, president, and Giorgio Polacco, first conductor, of the Chicago Civic Opera Association, in recognition of their services to opera in America.

PIANO MUSIC
For the Beginner

Methods and Recreative Material

For Keyboard Fluency
For Musical Feeling **For Musical Intelligence**

THE CHILD'S FIRST GRADE

by Blanche Dingley-Mathews

For the child beginning the piano. A primary book of piano principles and practices which is intended to help the busy teacher and aid the child.

The plan of the book, without attempting to interfere with the individual methods of teachers, and the great influence of the book, is that musical notation is the art of representing MUSIC, as reading MUSIC, as playing MUSIC, and not as reading NOTES and playing NOTES. **Price, $1.00.**

THE CHILD'S SECOND GRADE

by Blanche Dingley-Mathews

Materials and Methods for uncovering the musical gifts of the young pianist.

In this new Second Grade Mrs. Dingley-Mathews has not only given practice material, but also methods for arousing and holding interest in technical and musical exercises that will, to a large extent, eliminate "task" from the daily practice. **Price, $1.00.**

GRIMM'S INSPIRATION STUDIES

Five Volumes *by Carl W. Grimm*

Inspiration Studies is the right name for this unique collection. It is a real "inspiration"—a new idea in the way of teaching material whose "point" every teacher will see at once. "Appreciation of music" is now taught in the majority of our great universities and colleges—to say nothing of the conservatory proper.

From Book I to Book V he moves forward step by step and—even should circumstances lead him to give up his piano study—if he has completed these **Inspiration Studies** he will have learned to know and love many of the finest thoughts of music's master minds. He will have laid a foundation for the acquiring of "true musicianship, correct taste, culture and artistry." Five volumes, each **60 cents.**

STUDENTS' CLASSICS

Two Volumes *by Blanche Dingley-Mathews*

A collection of classic and standard piano compositions, graded and edited. Here in compact form may be found the different types of good music necessary to develop and foster a taste for the highest and noblest in tone. Great care has been taken to use as many keys as could be conquered in these grades, minor as well as major, and to select subject matter that would materially assist the teacher in overcoming any faults of head and hand which might, later on, prevent the student from following along those paths that have been tread by the Master Minds in Music. In two volumes, each **75 cents.**

GRIMM'S MELODIOUS STUDIES
IN THE FIRST GRADE

Two Volumes *by Carl W. Grimm*

These little studies are technical exercises in melody form: in the two books may be found studies in minor as well as major keys and while there are no note values shorter than eighths, nevertheless present a great variety of rhythmical patterns. Herein may be found two and five finger exercises, material for the change of finger, for trilling, emphasis for the fourth finger, chord studies in solid, broken and arpeggio form, work for the wrist, scale studies, crossing of hands, studies for the use of the pedal and—in all these **Melodic Etudes** the left hand is never neglected. All the technical features are concealed in beautiful melodic themes so that the beginner at the piano is unconscious of doing real technical work. In two volumes, each **60 cents.**

"The House Devoted to the Progress of American Music"

There is no Substitute for
SCHIRMER'S LIBRARY

THE most powerful educational results come by use of the best, and only the best, editions of music.

There is no better edition in the world than Schirmer's Library.

In this country alone, Schirmer's Library has been the standard of excellence, without parallel, for over a quarter of a century.

Its sale increases annually in the face of strong commercial competition only because it is impregnably meritorious and has the confidence of the public.

That the additions of recent years maintain the lofty purposes of the founder and early editors is confirmed by a study of the list here appended.

When in doubt use Schirmer's Library.
Never accept an alleged substitute.

A PARTIAL LIST OF NEW VOLUMES

1415—**LESCHETIZKY ALBUM FOR PIANO.** (Collected and edited by Edwin Hughes)
1429—**BRAHMS, JOHANNES, Concerto in D minor, Piano Solo, Op. 15.** (Orchestral accompaniment scored for 2nd piano.) (Edited by Edwin Hughes)
1432—**BAZZINI, A., La Ronde des Lutins** (*The Round of the Goblins*). **Scherzo Fantastique. For Violin and Piano.** (Revised and fingered by Leopold Auer)
1421 } **BEETHOVEN, L. VAN, Seven Trios for Violin, Violoncello and Piano.**
1423 } (Edited and bowed by Josef Adamowski)
1439—**FOSTER, STEPHEN, Album of Songs.** (Collected and edited by H. V. Milligan)
1447—**TSCHAIKOWSKY, P. I., The Nutcracker Suite, Op. 71. For Piano, 2 Hands.** (Arranged by Stepan Esipoff—Edited by Carl Deis)
1449—**SAINT-SAËNS, CAMILLE, Variations on a Theme by Beethoven, Op. 25. For 2 Pianos, 4 Hands.** (Edited by Edwin Hughes)
1454—**KÖHLER, LOUIS, Special Studies, Op. 112. For Piano.** (Edited by Carl Deis.) (English and Spanish text)
1456—**BACH, J. S., Eight Little Preludes and Fugues of the First Master-Period. For Organ.** (Edited by Widor and Schweitzer)
1455—**REINECKE, CARL, Twelve Studies, Op. 130. For 1 Piano, 4-Hands.** (Edited with foreword and analytical notes by Mrs. Crosby Adams.) (English and Spanish text)
1461—**MACDOWELL, EDWARD A., Sonata Tragica, No. 1 in G minor, Op. 45. For piano. Revised Edition.** (Edited by Edwin Hughes, with special preface by Mrs. Edward A. MacDowell)
1462—**MACDOWELL, EDWARD A., Second Concerto, Op. 23, in D minor. For 2 Pianos, 4 Hands.** (Edited by Edwin Hughes, with preface by Mrs. Edward A. MacDowell)
1469—**ALKAN, C. V., Préludes and Prières, 10 Piano Pieces Selected from Op. 64 and Op. 66. Arranged for Organ by César Franck.** (Edited by Charles N. Boyd)
1474—**REBIKOV, VLADIMIR, I., Silhouettes, Op. 31, Nine Childhood Pictures for Piano.** (Edited and fingered by Carl Deis)
1463—**KÖHLER, LOUIS, Technical Virtuosity Studies. With Theoretical Directions for Daily Practice, Op. 120. For Piano.** (Edited by Carl Deis.) (English and Spanish text)
1480—**SMETANA, BEDRICH, Album for Piano: 12 pieces.** (Edited and fingered by Ladislav Urban)
1482—**ARENSKY, ANTON, Suite in Canon Form, Op. 65. For 2 Pianos, 4 Hands.** (Edited by Mrs. Crosby Adams)
1485—**SARASATE, PABLO DE, Caprice Basque, Op. 24, for Violin and Piano.** (Edited and fingered by Efrem Zimbalist)
1483—**BACH, J. S., The Well-Tempered Clavichord, Vol. I.** (Edited by Edwin Hughes.) (English and Spanish text)
1479—**DUBOIS, THEODORE, Ten Pieces for Organ.** (Edited by F. Flaxington Harker)

A Hopeful Prospect

THOSE who have been brought face to face with cruel, cold science, have a way of accepting the discoveries of the wise men as indisputable.

We have, however, hundreds of instances of scientific blunders. The scientist in many cases, is liable to serious error. One great mind of this generation may overturn the whole practice of an art or a profession based upon supposedly accurate "scientific" discoveries of a former age.

The object of the true scientist is the search of truth. Because he is misled now and then by an *ignis fatuus*, is forgivable. Scientists, for instance, were able to prove conclusively a half a century ago, that a heavier than air machine could never fly. Since then airplanes were the foremost factor in the greatest war in history.

Now comes Prof. Paul Kammerer, of Vienna, whose discoveries promise to give the study of psychology and biology a much more encouraging aspect to those of us who are constantly looking toward the betterment of mankind.

According to the old school, acquired traits in one generation could not be transmitted by heredity to another generation. You might work amid the most wonderful surroundings in music, you might bring yourself to a high degree of musical attainment, you might become a most desirable citizen of the world—but, the older philosophers told us that these acquired traits would have no effect upon your children. All that you have fought to make yourself will be lost to coming generations. We never liked to believe this but with the habit of submission before the throne of science we silently acquiesced.

Now Kammerer has shown that with lower animals certain acquired traits can be transmitted. His first experiments were with blind subterranean lizards. By exposing these animals through many generations to intensive red light there were finally born lizards with eyes. The progeny of these all had eyes. Similar experiments with other animals were equally startling.

Kammerer does not claim that he is absolutely positive that traits in man can be transmitted in similar fashion. The lower animals breed with amazing rapidity. Many generations may come in a year. With man this takes centuries; but don't you see that by such a deduction as may be made upon the discoveries of Kammerer, a wholly new and very optimistic aspect is thrown upon the entire subject of heredity and the progress of mankind.

We have known for years of the numerous "musical families" in which the art had thrived for generations. We had assumed that it was merely a matter of accident or family calling. Now it seems to us that in the face of the Bachs, the Couperins, the Wesleys and the Puccinis, heredity did have a part and a very important part.

After all, our greatest instinct is the preservation of the race; and, in the light of these discoveries of a Viennese scientist, widely recognized in the highest scientific circles of the world, we realize that it does pay to fight hard and long for the best—that all of our achievements are not lost—that the fine things that we are teaching to-day will be carried on to higher and better things in coming generations. All this seems to disclose the office of the teacher to be indisputably the greatest of all—as it always has been and always will be.

Busoni

1866—1924

WHEN Ferruccio Benvenuto Busoni died in July the world spared him the damning reflection, "Just another pianist gone." Busoni was not "just another pianist." What he accomplished was something very fine and very distinguished. Many critics may not rank him among the very greatest pianists of all times, like Liszt or Rubinstein; but there are other knowing lovers of the art who realize that Busoni did certain things perhaps far finer than any of his predecessors or contemporaries. The exquisite beauty with which he suffused his playing of Bach was unforgetable. There was the perfection of technical finish betraying his German ancestry and training, combined with a Latin warmth revealing his Italian father.

Busoni in his young manhood played with great power and brilliancy; but as age came to him his most beautiful effects were those that resulted from extreme refinement of his art. Once we heard him play with the New York Philharmonic when Mahler was conducting. Mahler said to the editor just before the concert, "Busoni is to play the *Hungarian Fantasie* of Liszt. He plays it wonderfully; but he is a gentleman in the parlor not the Ziganer in the fields and woods."

Mahler was right. Busoni played the *Fantasie* with impeccable technical and artistic finish but without the fire and swing which a Liszt would have brought to it. On the same program Mahler played a Bach Concerto, conducting from the keyboard of a harpsichord instead of with a baton. Mahler recreated every thought that came through his wiry fingers. The orchestra was alive with interest and inspiration. It was one of the most wonderful musical experiences we have ever had. The playing of Busoni was forgotten, the playing of Mahler, who did not consider himself a virtuoso, was unforgetable. Yet Mahler playing Bach in a recital could never have compared with Busoni.

When we knew Busoni he was unfairly forcing himself to give concerts that his health made well-nigh impossible. His playing was always fine; but it was done only because his will so ordered it. His skin was a ghostly white and his eyes were worn and tired. His broad intelligence as a musician made him a delightful musical acquaintance.

As a composer he is highly regarded by some, although few of his compositions have gained any currency beyond the circle of a certain European group of cognoscenti. As a conductor he was greatly in demand in Europe. His passing removes from the world one of the most significant musical figures of our time.

The Joy of Improvisation

"IMPROVISATION is a gift," you say. "I can never learn to improvise." Nonsense! You learned to talk, to converse. When you speak you do not merely recite something that has been memorized. You express thoughts, ideas, in tangible relation and form. Improvising at the keyboard is very much the same thing, and it certainly can be learned.

Many people sit dawdling over the keys, striking odd chords, playing snatches of irrelevant melody and imagining that they are improvising. It is improvisation in a very crude form. But much of it is like the meaningless mouthings of a half-wit. If expressed in words it would sound something like "phosphorus, beetle, seaweed, carburetor, Jupiter, castor oil, sponge cake, Lithuania, William Jennings Bryan, carrots, cold fish cakes." We have heard countless people fool away their time "improvising" in this fashion.

At the other extreme are men with marvelous musical intellects, such as those of several concert organists who volunteer to improvise a fugue upon any theme submitted by the audience. We have heard some astonishing fugues born in this fashion. The whole undertaking seems incredible at times.

Anyone who undertakes to improvise should endeavor to learn as much as possible about form, musical composition and harmony. You would not expect to speak fluently and authoritatively without a good knowledge of grammar and rhetoric. Why expect to improvise music without some knowledge of music? We are forced to admit that once in every one hundred thousand individuals we encounter some one who seems to have an instinctive "feeling" for harmony and melody. For every such one there are thousands who *imagine* they have such a gift; and this accounts for most of the bad improvising. You will find lots of fun in learning how. Such books as "Theory and Composition of Music," by P. W. Orem, and "Extemporization," by Sawyer, are a great help.

Schumann sensed the inspiration that comes from improvisation in the following thought:

"If heaven has gifted you with a lively imagination you will often, in lonely hours, sit as though spellbound at the pianoforte, seeking to express the harmony that dwells in your mind."

Tears of Blood

The Etude is essentially a musical magazine. We never forget that. Our particular field is musical education. Because we have firm convictions that the greatest office of music in all education is that in connection with the daily inspiration and stimulation of all the children in our public schools, we advocated, a number of years ago, an ideal or plan known as "The Golden Hour." The Golden Hour was merely a non-proprietary title for a far-reaching scheme of teaching character building, ethics, honesty, square-dealing, patriotism, morality in the public schools, by means of precept, practical examples, moving pictures, addresses by public men, and so on, all with a background of music.

We have tried to make it clear that such a program was of questionable value unless music brought to it that life, enthusiasm and exaltation which can come in no other way. Gradually the need for this plan has become more and more recognized. Under various names it has been widely adopted—but we are still only at the beginning.

The National Education Association, at a recent meeting, appointed a committee to foster a general scheme for the teaching of ethics and character in our schools. Dr. Edwin C. Broome, the Superintendent of Education of Philadelphia, who has made an admirable reputation as an educational executive, is the chairman of the committee. Great things may be expected from this magnificent step. Dr. Broome is enthusiastic in his appreciation of music in public school work and he will unquestionably realize what an all-important part music must play in the moral and ethical upbuilding of the child.

It is not this committee, however, which was the inspiration for this editorial, but rather the sacrifice of an innocent life in a Western city—a sacrifice to a condition which years ago led us to advocate such a scheme as the Golden Hour. We refer to the infamous Loeb-Leopold-Franks case in Chicago.

Is it not possible that Providence has permitted the parents of these youths to suffer in providing a crisis of so terrible a kind that the whole country would be aroused to the tragic short-comings of our educational scheme? Here were two youths educated in the world's knowledge in a remarkable manner. Both had passed through high school and through the University with the highest rating, at an unusually early age. They were a product of the best brain-training procurable. But what did all this education amount to when it was rotten at the foundation? The great essentials of making these young men fine citizens were drowned in an ocean of learning which has now carried them down with it.

In this case education did not prevent them from becoming two of the most notorious figures in the history of crime.

Our hearts go out to their sorrowing parents who at this time would give every cent of their millions to have prevented this tragedy. Coming from a race which has given the world its greatest moral codes from Moses to Christ they have found their own offspring degraded beyond imagination in the new country which seemed to have forgotten its ideals in a wild scramble for so-called wealth. They with their children were the pitiful victims of an educational system which has permitted them to acquire riches in money but misery in real life values. They are drowned in tears of blood. But the same deluge may came to thousands of American parents in the future unless some far-reaching remedial plan is promoted in every town and hamlet from coast to coast.

As for the Franks child he was literally crucified by this same system as though to bring the world to a realization of the need for something far greater and bigger in our education. Only through such a sacrifice could the people of this day realize the gravity of such a crisis.

Perhaps some of our readers, who have been wondering why The Etude, a musical magazine, has been shouting "The Golden Hour" ideal from the housetops, may realize its serious significance. Perhaps some have even had a suspicion that we might have been trying to *capitalize* "Character-building." We have no interest in the name; but the principle means everything to us. Place yourself in our position, and realize what a glorious opportunity it has been to work with you in such a cause. Realize that statistics indicate that nearly seventy-five per cent of the inmates of prisons get there before the age of twenty-five; and you will soon see that it is our common responsibility, as musicians, to do everything in our power to promote the use of music in the public schools, in connection with any broad scheme to teach character-building and morality. We can never have too much intelligent work of this kind. Do something to-day to interest your local pastor, newspaper editor, school superintendent in this magnificent opportunity that has come to all music workers.

The future of America depends more upon the Solid Rock of Character than upon anything else. What is more important to us all?

The Dynamism of Wagner

The political force of Richard Wagner is just being fully revealed by recently uncovered documents. Here was a man who was feared for his propaganda far more than many astute statesmen. His gigantic brain was regarded as the firebrand of Europe by many who dreaded to think what it might mean to the monarchists. Wagner might amuse himself by writing music and dramas, as long as he kept his hands off the State. Had Wagner turned his mind to things political, with the same enthusiasm that he gave to music, the map of Europe might have been changed years ago.

Eugene Brado, in a recent article written for *Die Musik*, has traced Wagner's visits to Russia. So fearful of this man were the Czarists that he was kept under police observation every moment of his stay. The secret police were urged to take every possible precaution to record everything that he did and to give particular attention to observing who his visitors were. When Wagner returned to other European states the secret police breathed more easily.

Thanksgiving

"Prosperity Everywhere!" seems to be conclusion gained from reports pouring in upon us from all parts of the country. We can truthfully say that we were never busier than at the moment this issue of The Etude is going to press. November is the American jubilee of Thanksgiving. We thank the Almighty for the great prosperity which our busy musical friends are bringing to us.

Why Is So Much Piano Playing Dull and Uninteresting to Listen To?

By the Distinguished Piano Virtuoso

MARK HAMBOURG

This article is the second in the notable series by this famous pianist which we have the honor to present in "The Etude." Mr. Hambourg is the son of a noted teacher of piano, Michael Hambourg. He has inherited his father's gifts in the understanding of educational problems; and his writings are extremely practical. The following article will explain why some people find it a bore to listen to pianoforte playing. The piano, properly played, is a most sympathetic instrument. The modern pianoforte action is extremely sensitive and responsive. The great difficulty is that in most instances the instrument is learned from the very beginning as a kind of machine. There is of course a very distinct technical mechanism in the student which must be built by the teacher step by step. In other words an "action" must be trained into the student by the teacher, just as the piano maker builds an action into the piano. It is the piano builder's job to make his action as near perfection as possible. It should be the student's task to make his own "action," the "external mechanism," equally perfect. But his task does not end there by any means. In fact, it has only begun. The difficulty is that the average student does not realize this and does not know how to differentiate between the music he must play and the mechanism he has to play it with. Mr. Hambourg's article will aid thousands of students and teachers to play more beautifully. Mr. Hambourg's previous "Etude" series, republished in book form in England, has been most enthusiastically received.— THE EDITOR.

YOUNG students often come to play to me who are already far advanced in technical facility. They play me a difficult piece with perfect accuracy, fluency, and show a high level of proficiency; yet the whole performance is so dull and lifeless that I can scarcely bear to sit it out to the end. What is it that is lacking? Well, there are various subtle qualities to be acquired in piano playing before it can become interesting, even though the player be a very good performer in the ordinary sense of the word. That is to say, he plays all the notes and makes few mistakes. But if he does not succeed in giving pleasure to his hearers, what is the use of all his proficiency?

Cultivating Tone Production

And these qualities which he has not yet found, what are they? Now the most essential of them can be procured by the cultivation of a fine tone production. By tone production I mean a great deal more than just striving to acquire a beautiful touch. For a player may have a pleasant touch either in *forte* or in *piano*, or in both, and still be wearisome to listen to for long, if he can produce no variety in the quality of his tone. Even the most beautiful sound will pall if it continues unceasingly in an unaltered intensity of color. Therefore, to create life and spirit in pianoforte performance it is necessary that every variety of touch be studied and employed, so as to obtain tonal chiaroscuro and present different qualities of sound. Hundreds of students learn from their teachers that there are loud tone, and soft tone, and medium tone; but having learned that, so few of them are taught to differentiate further. Thin tone, thick tone, both in *forte* and *piano*, bright tone, muffled tone, tone like the sound of wind instruments, tone like bells, tone like the sound of the organ; all these can be more or less obtained on the piano, by the aid of the pedal, by the way the notes are attacked, by rythmical calculations, and by contrast in volume. A certain atmosphere of illusion must be created in pianoforte performance as in all the arts so as to bring out different effects in special relief.

The pedal, of course, is an immense help when rightly applied and studied; but very much uninteresting playing can come from too much use of the pedal, which wearies the ear like nothing on earth, and makes everything sound heavy. Insufficient pedalling is nearly as bad. It produces the dry player whose tones do not blend at all, and who does not attempt to do anything to soften the hard wood, ivory, and steel properties of the keyboard, which are of themselves so uncompromising.

Lack of Rhythm

The other cardinal essential, the lack of which makes so much piano playing fall flat, is rhythm; the rhythm which imparts dash, sparkle and brilliance, and which has a good deal else to do with manipulation of touch, and with the producing of many effects of tone color. Of course, quite a lot of people have no natural rhythmic sense; they can play in time, but not rhythmically. Now I think that no one who performs music with a really fine perception of rhythm, can fail to arouse the interest of the listener, even if he is unable to hold it for lack of some other quality. But unrhythmical playing is almost always spiritless and flabby. I consider the want of real rhythm one of the most usual causes of dull performance.

I spoke also just now of chiaroscuro, by which I mean the light and shade which should be in play throughout all renderings of music, that is to say, along the general esthetic rule that an ascending phrase increases in volume of sound and a descending one decreases. How many players forget this natural principle which forms a universal background for musical expression. They come and play a beautiful melody absolutely correctly, but with a desolating monotony of tone color.

Tedious playing arises from other reasons too. From pedantry; figuring out too much how Bach or Beethoven meant their works to be played or would have played them themselves (as if anyone could possibly really know), and all of which mostly ends in slavishly following the expression marks of enterprising editors who possess no more first hand knowledge than the student who adopts their views unquestioningly. Such students consequently contribute nothing of their own original thought to what they play, and so their performances remain dull and stereotyped. This would not be the case if only they would try a little more to sink themselves in the spirit of the music and thus find a living interpretation.

Then there are those who from want of study in a good school of playing adopt wrong tempi and play much too fast or much too slowly. Dragging the tempo, especially in melody, is a very common cause of intolerable dullness in the performances of many well equipped young pianists. They play not with sentiment but with sentimentality. There is also a distinct tendency nowadays to try to imitate the piano machines which render everything with such perfection of execution, with never a single mistake, and never a single inspiration. But the standard of inexorable exactitude that these mechanical pianos perhaps unconsciously set to the lay mind, has, I think, reacted to some extent on a certain school of pianists who value only technical precision in their playing and who sacrifice everything else to it. I once knew a very celebrated Russian teacher of the piano whose one thought was to preach proficiency of speed, and agility, as the highest goal for his pupils. Even when one of them came to him with a Nocturne of Chopin (it was the one in thirds and sixths) and played it to him with great expression, all he said was: "Now play it for me again, as fast as you possibly can."

"Don't Mind Me"

Too much selfconsciousness and lack of conviction are other causes of dull playing. People sit down and play almost apologetically, as if their mental attitude were to be explained thus: "I am performing this piece, but please excuse me, and do not look at me or mind me." It is foolish to be aggressive and overbearing, but it is also no good being deprecating, if you want to play the piano well.

Then, especially in England, but also to an extent in other countries, there still sometimes lingers with pianists the tradition of organists and performers of church music who are their musical ancestors. Now the manipulation of the keyboard on the organ is of such a nature that anyone playing the piano after being accustomed to the other instrument is inclined to produce a very dry touch upon the piano. This is because organists have to play half staccato to get the articulation, as the keys of the organ retain their sound after the fingers have left off pressing them down. Players on the organ therefore have to acquire a kind of short, quick mode of attack, suitable to the requirements of their particular keyboard.

Too Much Reserve

Something which also affects piano playing can be laid to the charge of the education at present so in vogue, which teaches self-repression as one of the cardinal virtues and that emotion should be hidden away as much as possible rather than be expressed. The reserve thus built up by the general spirit of such education is hard to break down and often holds in a vise the temperament of people who would fain express themselves but cannot "out with it." I remember when I was a small boy studying with Leschetizsky, that in the class one day while one of the pupils was playing, the Professor suddenly lit a candle and put it under the chair the boy was sitting on. "To warm his playing up a bit," he explained to us.

It is a curious thing that many people possess in themselves a very great deal of temperament and yet cannot communicate any of its warmth to their audience by their performance of music. They cannot get it across the foot-lights, as the actors

This renders their playing un

MARK HAMBOURG

and they are unable to really carry away their hearers; in fact (and now we have arrived at the crux of the whole matter) they lack Personality. Personality, that mysterious something which is everything; power, imagination, temperament, charm, all are contained and ruled by that strange intangible force which no one can explain. I doubt whether it can be acquired. It is a gift which Nature either bestows or withholds. Therefore, in my opinion, the best teachers are those who endeavor to develop personality wherever they spy it in their pupils, not those who try to impose their own ego, and stifle the budding soul of the neophyte, telling him that only technical accuracy is of importance. Many young people only need sympathetic stimulus to find out how to express themselves, and if they are taught on the piano the several means which they can use to help to that end they can have no excuse afterwards for their playing being dull and uninteresting. Then the reason must be that from their own natures they have nothing to give out. For, primarily, if the artist is to be interesting at all, he must himself have some esthetic message to bring, even when he is only a reproducing artist as is the pianist. The thought, light, and imagination that the performer is able to throw into the music he has set out to play, make it constantly re-live and recapture the attention of his audience. The end of it all is that no matter how skillfully a pianist plays the notes which are written, unless he can put into his music variety of touch, pulse of rhythm, contrasts of light and shade in the quality of his sound, his playing will remain dull and monotonous to listen to and will never uplift his hearers into the highest artistic communion with himself.

Self-Test Questions on Mr. Hambourg's Article

1. *What is the secret of life and spirit in pianoforte playing?*
2. *What is meant by chiaroscuro?*
3. *How does self-consciousness affect playing?*
4. *How did Leschetizky seek to "inspire" a small pupil?*
5. *How does organ playing affect piano touch?*

Contemporary Comments of Active Musical Minds

"An unerring taste in poetry is the necessary concomitant of the song composer."—Cyril Scott.

* * *

"Only trained composers (even the greatest) commit errors of style. Such faults are never found in folksongs; that is, in the true, traditional, ancestral folksongs. That is why folksongs are the best school."

—Raoul Laparra.

* * *

"The open air is a fine doctor, and the earth is a hospital where the most rapid cures are possible. Was it not Tolstoi who said an artist should till the earth, and sow, and reap, and sweat, and tire his limbs? And all this to inspire him to his work, and keep his mind and spirit clean?"—Ernest Austin.

* * *

"The American composer cannot hope to attain a real place in the sun through an imitation of European standards and styles. He must shake off the shackles of a too apparent continental influence and express himself sincerely and boldly, even though his expression may be found crude for a few decades."

—Charles Wakefield Cadman.

* * *

"The works of the great classic masters are absolutely indispensable to me, as musician and in my life. No one would less willingly be without them. But music is not a static art. Music is continually being made which is an expression of the period in which it appears. It is as necessary for us to know what is being done as it is to know and admire what has been done."

—Sergei Koussevitzky.

* * *

"The solidity of its architecture is the basic element in composition. Music is either a theme varied, or one theme superimposed on another. It must not lack a definite plan; neither can it be discursive, with shifting ideas. Beethoven's construction is definite and clear. Impressionism without definite form never touches the general public. All music comprehensible to the public is simple in construction. . . . One must use elements that strike the listeners—rhythm and the exterior [illegible] must catch and hold their interest, even if the [illegible] meaning escapes them."—Arthur Honegger.

A Serious Danger to Some Young Students in Large Cities

By Eugenio Pirani

[Editor's notes: *The following letter from Mr. Pirani—whose distinguished attainments as a teacher, performer and composer, in Italy, Germany and in the United States, are familiar to* Etude *readers—may shock some of our friends. Mr. Pirani has spent most of his many years in America in New York. There is no gainsaying that since prohibition immense advantages have come to our commonwealth through the closing of thousands of saloons which were a source of disaster to many family groups; but on the other hand, in some States there has been such an open defiance of the law, such a tendency upon the part of audacious youth to break the law just for the sake of being smart, that a great work must be done before real prohibition actually exists. The* Etude *is not debating the issue whether total abstinence brought about by prohibition is to be preferred to voluntary temperance. The laws of our country are on the statute books, and good citizens are those who uphold the law. Until they are changed there is no alternative unless we elect to evade the law. Mr. Pirani has questioned the wisdom of the utterances recently made by Dr. Nicholas Murray Butler, of Columbia University, who assailed the prohibition law because of the wholesale violation of the law in many States. The editor of The* Etude *has seen a lamentably large number of young people who have made an open brag of taking alcohol clandestinely. They would never dream of doing it because of the disagreeable, throat-scalding beverages themselves, but seem to glory in a kind of braggadocio defiance of the law, just like the bad boy sticking out his tongue at the policeman. Mr. Pirani has seen the dangers of the clandestine use of the alcohol drug to the nervous system of young musicians. He was brought up in lands where the moderate use of alcohol was almost never accompanied with inebriation. The present condition is one that will be under control in time and, as we have said, affects only a few wet States. The horror of it is that any of our young folks should ruin their musical careers by deadening their nervous systems by means of the terrible drugs which now pass under the name of beverages. We recently heard of a young musician who was made stone blind through drinking wood alcohol, which he was led to believe was pure Scotch whisky just smuggled in from the Bahamas.*]

President Nicholas M. Butler's recent utterances against prohibition have aroused a storm of comment, pro and con. Of course it cannot be assumed that the head of a famous institution, which has for its aim the making of serious, reliable men and women, would approve of intemperance and drunkenness. If he only meant to say that the enforcement of this law is impossible and that prohibition, through the charm of "forbidden fruits," has enrolled more devotees to Bacchus than was the case before, I declare myself in sympathy with the well-known educator.

It is deplorable indeed to observe the attitude of the so-called "best society" in regard to that question. I surely do not boast of superhuman sanctity and do not aspire to "beatification." On the contrary I am always glad to see young people having a good time and even enjoy taking part in their entertainments; but, I must say, I notice with alarm and disgust how intemperance licenticusness and intoxication are becoming more and more the fashion and are undermining the moral foundation of our beloved country.

I shall consider this problem especially from the standpoint of an artist and of a teacher and would like to sound a note of warning which, like the "writing on the wall" to the impious Belshazzar, should put *young artists, in particular those of the female persuasion,* on their guard against the dangers lurking behind innocent-looking "orange juices" and other similarly camouflaged alcoholic beverages, offered at social gatherings before table or mixed in the coffee after dinner.

Where do they get all those insidious compounds, although the law is supposed to forbid their sale?

It may be that just the difficulty and even the danger connected with obtaining them enchances their fascination. It is well known that what formerly was considered shocking by refined, well-educated people, and consequently was left to the dregs of society, to ruffians and scoundrels, is now accepted by the elite of the fashionable world. That which formerly was *common glass* has now become a *precious diamond*. Young musicians, admire the smartness of the hostess, who through some magic formula (much money!) has succeeded in producing the enchanted stuff for the benefit of her deceived guests.

Young musicians (particularly if they are good-looking girls) are supposed not only to enliven the assemblage with their charm but also with some vocal or instrumental contribution. The hostess or some of the guests has from the very beginning been urging the inexperienced young thing to repeated libations, which renders her an easy prey to unscrupulous liberties and leads her gradually to immodesty and debauchery.

This is no doubt vile, even criminal; but also the *art* of the young musician is dangerously impaired. I have witnessed young singers and pianists, who, after having indulged in those tricky potions, lost totally the control of their voice or their fingers and, after vain efforts to do justice to the composition, made a deplorable mess of their rendition.

The listeners, although themselves half-intoxicated, do not completely lose their critical judgment and, without making allowance for the distressing condition they themselves have inflicted upon the young artist, proclaim her performance inartistic and worthless. Criticism is easier than performance. In this way the musician not only loses her moral but also her artistic reputation.

I would like to ask some of the young musicians who make themselves the apostles of that "innocent pastime" of breaking their country's laws if, in the face of all disgraceful effects of drinking they could name some advantages obtained through this habit.

Is it perhaps the burning, scorching sensation in the act of drinking?

Or is it the captivating behavior of the intoxicated?

Or do they find it beneficial to morals, to good manners? Shakespeare found the right word as he said: "Oh, that men should put an enemy in their mouth to steal away their brains!"

Another Way With Arpeggios

By Eutoka Hellier Nickelsen

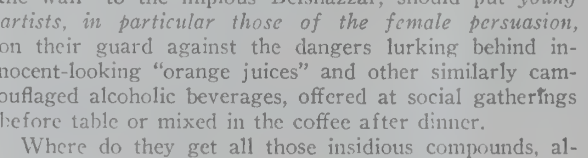
A—1. Memorize (away from the keyboard) the notes that make up the arpeggio.

2. Memorize the fingering of each group.

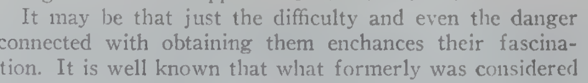
3. Play the arpeggio very slowly, each finger being placed firmly on the key. (Do not allow the first finger joint to cave in.)

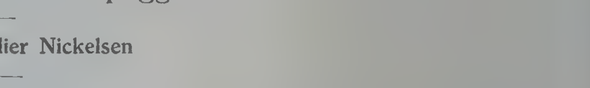
4. Using the exact fingering given to each note, practice the following exercises.

Ex. 1

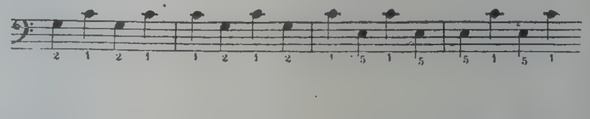


Ex. 2





Ex. 3



B—Using 4/4 measure signature.

1. Consider each note of the arpeggio as a "whole note."

Consider each note of the arpeggio as a half note.

Consider each note of the arpeggio as a quarter note.

Consider each note of the arpeggio as an eighth note.

2. Play the arpeggio in triplets.

C.—1 Staccato (moderato).

2. Presto e legato (gradually increase the tempo).

New Musical "Well Springs"

The Etude has "discovered" several new writers upon music, men and women of rare experience who have not been writing upon their art hitherto. They come with fresh, modern, useful ideas. You will enjoy reading their articles in coming issues. It will add a new note to our policy of furnishing the best printed musical instruction obtainable anywhere in the world.

What Chance Has the Adult Beginner in Music?

By CAMIL VAN HULSE

A helpful article telling students beginning "along in years" and those who teach them what exercises to use at the start to overcome the handicaps.

The last few issues of The Etude have presented several short contributions dealing with the teaching of adult beginners. The problem certainly is an interesting one and worthy of a more detailed study. Adult beginners are by no means an exceptional occurrence; and many of them have been known to make very good and to derive ample benefit from their late efforts. In our own career as piano teacher, we have met with quite a few cases, and our experience with them has enabled us to work out a special method which, provided that minor details are arranged so as to suit each student's individual abilities, will prove much more efficient than any ordinary course of beginner's training.

Indeed, common sense tells us that there can be no question of using the same method for both a child beginner and an adult one. To an adult, one can tell a hundred and more things which will be a mighty help to him, and which would not at all impress a child's intellect; whereas, many things which will help a child to understand would sound "childish-like" to a grown-up. To an adult, one can tell the *"why"* of things, whereas in many cases one cannot do the same to a child, and has to confine oneself to the *"how."* The question of "relaxation" especially is an invaluable aid to adults and will be readily grasped by them. Of course, as said above, minor details and the way of presenting them to the student will have to be different according to each individual. This is where the teacher's own initiative comes in. Every teacher ought to be not only a *pedagogue,* but also a *psychologist;* and he will have, in his daily work, plenty of opportunities to make good use of his capacities in that line.

General Outlines

So the present article will present only the *general outlines* of our system, those outlines which can safely be followed in most any case of adult-beginner. The rest is left to the teacher. Yet, we know of one work dealing with this particular teaching problem, which we can safely and emphatically recommend to teachers and students alike; it is entitled: *"Adult Beginner's Book; Suggestive Studies for Music Lovers,"* by Caroline T. Norcross. This is, to our knowledge, the best and most complete book on the subject, and its value cannot be overestimated. For the student, it is a handy source of information to be used in the teacher's absence; for the teacher it is a most helpful guide containing in concise form all the information he will have to impart to his pupil, and also excellent suggestions as to what order to adopt in presenting the lessons. As a matter of fact, the teacher will alter many details to suit the student's particular needs; he will split lessons in two or more sections; he will occasionally assign a different place to a lesson; and he will give additional exercises and practicing material (the last chapter of the book contains a list from which he can freely choose); but on the whole the book is an invaluable guide and it deserves to be warmly praised and widely used.

Handicaps

Although the exercises given in this article are more of a preparatory nature, we will occasionally refer to such chapters in the *"Adult Beginner's Book"* where the same point of technic is treated. When doing so we will use the abbreviation "A. B. B."

When comparing the chances of adult-beginners with children's, the outstanding consideration which immediately presents itself to our mind is this. We have to reckon with:

1. A double handicap.
2. A double advantage.

The double handicap results from:

1. Loss of time—running often into years.
2. Loss of physical requirements: elasticity, flexibility, and so on.

The loss of time is partially made up for by his enthusiasm and eagerness to make good. The loss of physical requirements can be counterbalanced to a certain extent by the application of the principles of modern *natural* technic, consisting, not of adaptation of fingers and hands to piano playing, but of adaptatation of piano technic to the *natural conformation* of arms, hands and fingers. On this principle are based the exercises we have devised for adults and which make part of this article.

As to his advantages, they are:

1. Enthusiasm, which unquestionably is very strong, as it makes him undertake piano study at his age.
2. More developed intelligence: a most appreciable advantage, since it is a commonly admitted fact that three-fourths of all technic has its seat in the brains.

In what exact measure the advantages counterbalance the handicap, we do not mean to state; undoubtedly, it is an invaluable thing to have an early start and to have plenty of time to let one's technic ripen by years of growth; but still the adult's chances of becoming an average good pianist and a sound musician are pretty fair and worth taking.

Bringing Back the Flexibility of Youth

As to the way of combating his handicap and deriving profit from his advantage, we make, offhand, the following remarks:

1. The physical handicap can be neutralized only to a certain extent by special physical exercises intelligently used. These we describe in the first part of this article.
2. An excellent way to take advantage and make an ally of the student's more developed intelligence is to arrange the study material so as to train not only his technical side but also give him from the very start a knowledge of harmony, modulation, transposition, musical forms, interpretation, esthetics, and so forth. All this will rouse his interest and be a mighty help for his musical understanding. Here again is one of the great merits of the *"Adult Beginner's Book,"* and for which the author deserves our unmitigated approval. Each lesson is so arranged as to present some point of technic, some rule of harmony, and some detail of interpretation or appreciation.

We will give a series of exercises devised to bring back some of that elasticity and flexibility one has lost through years of neglect. The less manual labor has been done the better. Women have a decided advantage in this point. Men, in general, are not very bad off either, since the greatest percentage of adult beginners are intellectual workers who have done very little manual labor. In case much hard labor with the hands has been done, the prospects are almost hopeless. Still, we have known of one miner who, in a few years, was able to take up a position as pianist in a third-rank movie theatre, which in his case was a noticeable achievement.

Practicing Away from the Piano

All of these preliminary exercises are to be practiced away from the piano.

First of all, the student should have a clear understanding and *feeling* of *relaxation.* The importance of this cannot be overestimated, the more so because an adult beginner generally makes a resolution to "go to it," heart and soul, and to put all his energy in it.

This usually makes him strain all his muscles and rigidity ensues. To avoid this, it is all-important that he should know the advantages and necessity of relaxation. Explain to him how useless it is to spend energy on ordinary "fingerwork," since most of that kind of playing can be done by mere weight of hand and fingers. Even an ordinary *f* can be produced without wasting energy; and all the amount of energy thus saved and stored will be none too much to be used in the rendition of certain works of majestic dimensions and overwhelming effect.

When the principle of relaxation is deeply impressed on his mind and thoroughly understood, pass on to the following movements:

1. Open the hand and fully extend fingers—then snap fingertops against palm. Repeat, first slowly, and gradually increase speed.
2. Put the ten fingertops all together; then, keeping tops of corresponding fingers together, slowly open hands and extend fingers till palms join. Be careful not to make knuckle-joints crack.
3. Put relaxed arm on a table, palms down, fingers slightly curved. With a *swinging* movement, raise one finger as high as is possible without straining, and then let it *fall* down in its initial position. Repeat many times and do each finger successively. *Do extra exercise with thumb.*
4. Let relaxed hand swing loosely in wrist joint, first up and down, then from left to right.
5. With arms hanging loosely along the body, shrug the shoulders in all possible directions: up, down, forward and backward.
6. Let fully extended arms swing loosely in shoulder-joints, forward and backward, gradually increasing length of swing till they describe a whole circle over the head.
7. With arms hanging loosely, rotate the hands so as to describe a half-circle with thumbs, increasing speed till one cannot distinguish the different fingers.

All these exercises are to be practiced until they can be performed with suppleness and gracefulness. It is understood that the amount of practicing depends on the degree of stiffness, resulting from manual labor, that has to be overcome. Sports, athletics and calisthenics, intelligently understood, all help to attain looseness of movements.

Now the student is ready for exercises at the keyboard. Those are to be practiced without any notes. Do not bother the student with notes now; let him concentrate upon *sounds* and the way to produce them. In general, adult beginners know how to read notes. We have not met with a single case where the notes had to be taught. When applying for lessons, they all told much the same story: "I have studied music when young, but I liked baseball better so I quit taking music. Now, whenever I hear somebody playing, I feel sorry, and having a few leisure hours I'd like to try what I can do yet......" So there is no necessity to teach notes—a simple revision of what has been learned previously will do in most cases. A start may be made right away with *tone-producing.* Always draw his attention upon the tone he gets. Make him form an early habit of listening to himself. This will save him lots of time and trouble later on.

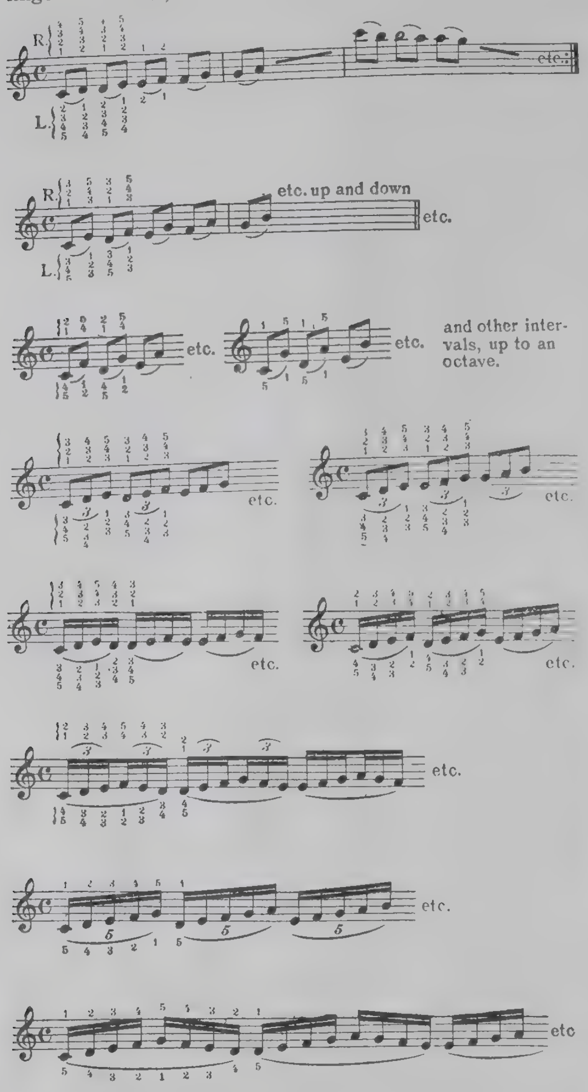
Relaxed Playing

First, repeat the subject of *"relaxation,"* as applied to playing. Show him that his hand, as it lay relaxed on a table, must now lie on the keys in much the same way. Show him how the weight of his hand is sufficient to press down several keys. Then show him how the whole weight of his hand and arm can be concentrated in one finger, and how it can be shifted from one finger to another. Show him again, how a *weighed-down* key makes a much more beautiful tone than a *struck-down* one. Play a chord with relaxed, graceful movements, and then play the same chord with rigid wrist and stiffened fingers. Let him hear the difference; and point out that all the previous exercises will help him to obtain a beautiful tone. (The A. B. B. gives a very good description of the arm and finger touch and the way to produce them, in lesson I under the heading "Touch.")

Now make a start with the following series of exercises:

1. Noiselessly press down one key to give a firm support to the weight of the hand and arm; then swing another finger up and down on its corresponding key, making as round a tone as possible, and being careful to make the succession of notes rhythmical. The finger supporting the hand must be at a distance of at least two fingers from the one playing. Practice all of the fingers in that way.
2. Do the same exercise without any supporting finger, the hand poised above the keyboard. (See A. B. B. Lesson I: Finger Exercise—also Lesson II: Exercise No. 2.)
3. Strike single notes (each one previously mentally determined) with a movement of the hand and forearm. In this, the wrist-springs must get busy and act as *shock-absorbers.* Each note must be detached from the next one, and must be played with a graceful, swan-like movement of the forearm. Be not afraid to exaggerate. (See A. B. B. Lesson I: "Arm Touch," and Lesson IX on page 33.)
4. In the same way, play double notes, chords, and finally octaves. Mind to have all the notes similar in intensity, value, and sound. (See A. B. B. Lesson I: "Chord Exercise," "Octave Exercise"—also Lesson II: Exercises Nos. 3, 4 and 5.)
5. Practice Exercises 3 and 4 with pedal. Have the pedal down immediately after each note or chord, and up while playing the next one, thus making a perfect legato. Draw the student's attention to the resulting change of tone. (See A. B. B. Lesson X: "Pedal.")
6. Make same movements as the one described in No. 7 of the prelimiary exercises, thus obtaining a

tremolo. Begin slowly and rather exaggerating the intensity of the movements—then gradually increase speed and decrease intensity of movements till you obtain a light tremolo. Do this on an octave-span; next take a sixth, or fifth, or third and finally a second. Play this last interval with thumb and third or thumb and fourth fingers—but make the same movements as for the octave-tremolo—this is called the "hand-trill" and is more effective and easier than the finger-trill. When familiar with these movements, the student is ready for light finger exercises combined with hand-progression. The best adapted for this purpose are two-, three-, four- and five-finger exercises, such as following examples:



and others. (An equivalent of the first one of the above exercises is to be found in A. B. B. Lesson IX under the heading "Slurs.") The teacher should insist that each group of 2, 3, 4 or 5 notes should be separated from the next by a slight *"breath-taking"* of the wrist. This latter joint, being the shock-absorber, must *always* co-operate with the fingers.

Once this far advanced, the student may be allowed to use notes. As we remarked previously, most all adult-beginners know their musical theory; a rapid revision to freshen the memory is usually sufficient. (Lesson I in A. B. B. gives a concise and complete recapitulation of all the essentials of musical notation.) It is also advisable, even necessary, to make a start *now* with the principles of tonality, transposition and harmony. If the "Adult Beginner's Book" is used, and this we strongly advise, there will be no worry about this, as all these branches are taken up simultaneously, and each lesson prepared accordingly. The student should play his exercises and preludes in all major and minor keys. Then he may begin practicing scales, and may be given a book of light studies, such as Bertini, Schmidt, Kohler, Heller and others enumerated in A. B. B.

As for pieces, there is no better material to suit his budding technic and at the same time his often well developed musicality, than the easy compositions of great masters: *Kinderstucke* and a few *Lieder ohne Worte* by Mendelssohn—some movements of Hadyn and Mozart Sonatas—some numbers of the *Jugend-Album* by Schumann—some of Beethoven's *Bagatellen,* and many more, a list of which will be found in the "Adult Beginner's Book."

"One cannot help insisting that extra noise does not spell extra music. Volume of sound is surely not, or ought not to be, the aim of high purpose."

—Franceso Berger.

How Ought Bach to be Played?

By Walter Dahms

Novices in the art of music are usually rather perplexed in the presence of Bach's pianoforte compositions. If honest, they will readily admit they do not quite know how to deal with them. The notion is widely spread that Bach's pianoforte compositions are merely intended as a suitable study for one's "action," as a means for developing independence of fingers and hands. This opinion is supported, moreover, by the way pianists in their concerts are in the habit of playing Bach. It would often seem as though they made a specialty of his works for beating the record of speed. Their audiences, however, feel bored; nor can they help it. For music, devoid of expression, with nothing but a tiring rhythmic and dynamic uniformity to boast of, enlivened at rare intervals only by some curious effect, is indeed incapable of riveting the attention for any length of time. Even Bach's music could not. The result is the belief that his pianoforte compositions are destitute of "melody," some few well-known pieces excepted, where the melody catches the ear. The very same person, however, who fails to be aware of Bach's pianoforte melodies, are astonished to find the greatest variety of expressive and genuine melodies in his vocal music. Is Bach the pianoforte composer so vastly different a man, then, from Bach the author of the "Passion of St. Matthew" or the "B minor Mass?" Or ought one to say that singers who have a text to sing know better than the pianist how to bring out the melodies?

Now what is chiefly amiss is that Bach's works are mostly played much too fast. Although we are living in a period of speed and "records," the music of the classic masters has nothing in common with the development of machinery. The laws governing its subtle influence on the hearer remain as immutable as those of the performance of their compositions, notwithstanding the improvement of our sense of velocity by the contemporary inventive genius. One had better, therefore, begin with playing Bach slower, very much slower than has been the custom. The left and right hand parts will then, all of a sudden, begin to sing. It will be seen that expression, a "melody," is forthcoming; where, heretofore, one was used to hear nothing but a voluble interplay of tunes. For example the "Inventions in two parts" that are, generally, a torment for so many pupils, will reveal an undreamt-of wealth of melody. Prepared thus, one may safely tackle the "Well-tempered Clavichord," the Suites and the Partites.

Whoever has succeeded in hearing and feeling Bach's melodies will not be long in finding the proper way of performance. He will, without sentimentalism, be able to introduce rhythmic liberties and dynamic shadings, such as will convert the former "studies" into pieces full of life and beauty.

The proof that Bach's piano music is generally played much too fast is within easy reach. In Bach's time 200 years ago, music was still in the period of evolution, and had by no means obtained that degree of inward and outward speed that, at a much later period, a Chopin or Schumann was enabled to express through this medium. The few fingerings due to Bach himself, in the editions of his works, afford the best insight into the manner of his own playing. With his original fingerings, these pieces cannot possibly be played with the speed adopted in our time, and which disfigures their content to such a degree. Take into consideration, on the other hand, Bach's instruments! His son Philipp Emanuel tells us that Bach was not only able to "sing," in playing the clavichord, but also while using the hard and refractory cembalo. It is this "singing" that practically excludes an exaggerated speed. Besides, how much more difficult is it not to bring out, clearly and distinctly, on our modern pianofortes, with their metallic resonance, and with their volume of tone, the polyphony of Bach's music, than with Bach's instruments and their wooden resonance! The pedal may be used only sparingly, and the touch must be carefully adapted to the character and content of each part.

Another important though, now-a-days, much neglected item in Bach-playing is that his piano compositions have to be played chiefly in the so-called non-legato, a style representing, between the legato and the staccato, a well-determined mode of striking the keys. Now, a genuine non-legato will render practically impossible an exaggerated speed. The player is thus enabled to correct himself most efficiently by means of the non-legato technic. Nor should the tempi given in the modern editions be allowed to interfere. Bach himself has given but a few. The others have been added at a later date and quite arbitrarily. It is as well to bear in mind that terms of tempo, such as *adagio, andante, presto, allegro* represent no absolute, no definite values. They are merely meant to indicate the character of the tempo, and there are slow allegros as there are fast adagios. The first thing to try should always be to comprehend the character of the piece and to find the melody. The tempo will follow naturally.

There are, no doubt, many lively pieces by Bach which require a fast tempo. When I said that Bach ought to be played slower than is usual, I wished to say: Slower in Character. The most important thing, however, will always remain the player's receptivity for the beauty of music. Whoever has succeeded in finding it in Bach's wealth of melodies, will not be long in learning how to play Bach as he ought to be played.

Chopin, whose personality and compositions reveal so very different a world from Bach's, was in the constant habit of playing Bach for several weeks exclusively, whenever he intended to play his own compositions in concerts. This was, as he used to point out, the only way for obtaining the requisite sureness and beauty of performance. And we know from his pupils that he played Bach invariably in a "curiously moderated tempo." He was thus evidently aware of what was essential in Bach. And he knew how to bring out the melody.

The key to Bach's works for the piano is the "Inventions in two and three parts." The literal title which Bach gave to this work runs as follows: "Straightforward guide, by which lovers of the piano, but more especially those eager to learn, are shown a clear manner, not only to play with clear intonation in two parts, but also, when further advanced, to manage three obbligato parts correctly and well. At the same time not only to secure good inventions, but also to develop the same well, above all however to obtain a cantabile style of playing, besides acquiring a strong foretaste of the composition."

All players of the pianoforte who have as yet failed to relish Bach, may be advised to go through the following course, using a moderate measure: "The Inventions in 2 parts," Nos. 1, 3, 4, 6, 7, 10, 13, 15. The left hand is supposed to acquire the same force of expression as the right, for they both play melody and nothing but that. Then some of the "Little Preludes." Afterwards, the Inventions in 3 parts, Nos. 3, 6, 7, 11, 12, 15. Finally, several preludes and fugues from the "Well-tempered Clavichord." Whoever has made with a due amount of attention and love, a study of only a few Inventions, and who, for example, is able to feel the wistful and songful mood of No. 7, will have reaped a great and decisive advantage for all his piano playing. As a last piece of advice: Each hand ought to "declaim" its part, as if the notes were words.

So Easy!

By Giulio di Conti

Yes, it is so easy to think that the other fellow has done it easily!

One reads of how a great master gets into something like creative frenzy while at work—and at once the imagination figures him as dashing down the ideas as they press for utterance. True, this state may sometimes exist for a few minutes while some fresh inspiration is born. But what a deal of patient toil goes into the bringing of the product to completion.

Beethoven kept thematic ideas, as they came at odd times, carefully recorded in his note books. From these he chose cautiously that he might have just the ones which would unite in developing a work he had in mind. Wagner began his "Der Ring das Nibelungen" in 1848; and it was not entirely completed until November 21, 1874. During the greater part of this period the composer was actively engaged upon this work. Scarcely any one of his operas was produced in less than two years of hard study and labor.

Boito, however, seems to have won the palm for faithful devotion to one work. His "Nerone" was conceived and begun during his sojourn in Poland in 1862; and this opera, founded on the career of this ruthless Roman Emperor, was not quite finished during the last months of his life, which ended in Milan on June 10, 1918.

Keyboard Motions that Insure Better Piano Playing

By the Well-Known American Pianist

DAI BUELL

[EDITOR'S NOTE.—*Miss Dai Buell was born at Fort Wayne, Indiana. Her best-known teachers in pianoforte are Carl Stasney, Carl Baermann and Antoinette Szumowska. She also studied theory at the New England Conservatory. As an American trained pianist she created a sensation in her appearances in London and Paris. The general criticism of the press here and abroad has been unstinted in its enthusiasm over her art. She has played extensively in her native country, often characterizing her recitals with very interesting and significant notes upon the works she performs. This, added to successful experience in teaching, enables her to bring a fresh note to* THE ETUDE *in such an article as the following.* THE ETUDE *is continually seeking to present new ideas from new writers. Many new names will appear in our columns this year.*]

EVEN in this age when there is so much good piano playing and when pianistic technic seems to be well-developed, generally, there appears now and then one whose performance seems absolutely effortless. Such pianism seems to radiate only joy in the release of the living beauties bound behind the hieroglyphics on the printed page. This free joyousness in turn permeates the audience, and the resultant attitude is the simple joining of hands by artist and audience in front of the magically present pictures.

Is this ideal situation due largely to the performer's consideration of all keyboard possibilities? We think so! For how can the divine conception of a vital interpretation find its full realization if there is the least mental handicap or physical limitation?

Every Little Movement

The title of the old popular song, "Every Little Movement Has a Meaning All Its Own," comes to mind when speaking to pupils on such subjects as:

(a) Conservation of Energy.

(b) Forming of the hand in the position of the figure to be executed.

(c) Mapping out whole compositions according to graphic outlines.

(d) Parallel motion to insure speed and accuracy.

Conservation of energy should be one of the most important studies of the aspirant to the concert stage. How deplorable to be compelled to excuse slovenly performance at the end of a program with the phrase—"Oh, well—he is probably tired!" Yet, even at the recitals of well known artists, such remarks are overheard. The solution is, of course, the distribution of powers and the control of relaxation. There are many opportunities to "let down" during a performance, without in any way governing it by one's physical limitations. In fact, the same physical limitations were present at the time of the mental conception of the composition; and it is often only necessary to follow the lines of least resistance in the recreation of the impulse of the creator.

Breathing and Piano Playing

Breathing plays a great part in the inception and flow of a musical phrase, just as it does in speech where the length of phrase line is largely moulded by the diaphragm action. The laws of breathing would not permit a phrase of exorbitant length to exist in the mind of the composer. It must terminate according to capacity and inhalation and exhalation.

While not invariable, this law of phrasing is helpful if one would give to a composition that life of which the composer dreamed, and if the work is to speak eloquently to its hearers. The breath is held when a long exciting musical moment is at hand and we float on the serene plane of atmospheric calm with long unconscious respiration. One can detect different breathing in response to every musical emotion; and breathing in relation to phrase line should, therefore, be a study of the musician.

The Laws of Art

It is almost trite to say that the laws of life and science are the laws of art, but it is sometimes necessary to recall that fact when working out an interpretation. Take, for instance, the study of *climax* in music. How often does one see a youthful virtuoso working up a figure to a great height indeed, giving to the hearer a distinct thrill, only to offend in his youthful ardor by *keeping on* at that great height apparently indefinitely—only to establish the impression of ranting! Would that he had followed the line of least resistance, realizing that each crest has its trough, applying the old rule, he learned in "Physics," that "to each action there is an equal and contrary reaction." If, therefore, he had followed that tendency to relax his pitch, physically and musically, he would in most instances, have achieved the ideal in the *reaction* of that which the composer had in mind.

There seem to be no examples where, in the progress of a composition, to go against nature is necessary. Sometimes, in a brilliant display piece, the composer requires the interpreter to drive himself to an almost superhuman persistence at the end of a composition; but in that case the reaction comes, not in *tone* but in the moments of silence which follow.

DAI BUELL

Reserve Power

Reserve power, so synonymous with "Conservation of Energy," and so necessary if the proper distribution and balance of a performance are to obtain, must be subconsciously contributory; and it is comforting to reflect that everything is relative and that at no moment is it necessary to force any power, so completely is the effect of one gradation of force and speed dependent either on preceding passages or on the ones to follow. From the first swell to the final climax the degrees of emotional intensity of tone should fall in direct proportion to their importance in the dramatic scheme of things. Hence it follows that the resultant revelation of the composer's message can be just as eloquent and find as complete a response in the soul of the listener, even if on a smaller canvas, as the performance of greater range.

How often, indeed, have we found that fact proven in two interpretations by different artists. One whose animal force is very great, but who has not formed a definite conception of the work in hand, may have followed the moment's impulse and released a reading of the notes which did not allow the import of the composition to "register;" perhaps only because his phrase-climaxes were as great as his final or composition-climax. He had, in a word, used *all* of his powers at *all* times instead of employing deliberate restraint.

On the other hand, a more sensitive artist, with perhaps not so powerful a physical technic, has moved you more deeply in the same composition, in an entirely more limited range, *but* with more intelligent gradations. Did not, therefore, the latter artist, though not so physically developed, give a more powerful reading than the former, because of his intelligent distribution of force and the *implication* of that which he did not employ?

It does not follow that if the more physically powerful pianist were to employ *his* powers as intelligently as the more sensitive artist of lesser strength, one would receive a more thrilling revelation of the composition's content. The plane of our total adventure is established with the attack, and—all is relative.

Deliberate Design

But, you say, such deliberate design eliminates inspiration. Ah, no! We have found that inspiration during *performance* is hardly a success. An inspirational moment is apt to invite contemplation and therefore interrupt the dramatic whole in the accompanying desire to bask in the new beauties of the passage. It is only when such a moment occurs in the *studio* that it is of greatest value. Then one can indulge that contemplative desire and decide how the effect was produced, and so fit it into the complete mosaic. An inspirational moment then becomes of greatest influence; for it alters the whole work and, by absorption, it is so associated in the sub-conscious with the master-work that one need only recall the mood of that moment of light and it is at once reproduced before one's audience. Then only does an inspirational moment become of greatest import.

Now that the importance of an intensity-plan for a composition has been discussed, it might be well to make a few citations of the Motions of Control.

We have said that so much depends on Attack, that the plane of our flight may be established at once. "Know *thyself!*" So many young musicians are fooling themselves. They think that they have all the power of a "Boanerges of the keyboard," and begin a work with a brilliance that they cannot sustain. They force their tone to such a point that at the middle no greater volume can be summoned and the interpretation *must* conform to the physical limitations. If only they would say to themselves before the attack, "Now, I have only a certain sweep of power, and because I must employ a tremendous 'working up' in this composition, I must restrain this beginning."

"But how?" you say. All is so easy when one law is kept in mind. The degree of speed with which a key is depressed controls the intensity of the tone. And since we are beginning our citations with the building up of a composition instead of—as is so often dramatically demanded—allowing it to begin at a height and drop, we must first talk of keyboard contact.

Pianissimo Effects

A beautiful pianissimo, so rich in the quality that carries, is an enviable possession, and not so difficult to acquire if that one law is kept in mind. With the cushions resting alertly on the keys, it is helpful to feel that the *live weight* of the arm is almost held *off* the keyboard, *deliberately*, with the elbows held slightly from the body. The cushion presses the key with the desired quality and intensity held in mind, and the pressure from the arch is quite enough to produce this nicely conceived tonal attack.

Of course this is only one way to produce the pianissimo attack-tone; but it is one which insures a wonderful legato and introspective quality, if the cushions do not leave the keys but allow the finger to rise with the natural rebound of the key.

The full-arm attack can be controlled to a surprising degree, if the descending arm is aided by a high wrist which falls (*after* the cushion contact) slowly or rapidly, according to the intensity desired. This touch is far preferable to the former, if the following tones of the phrase are to be sung legato by use of keyboard leverage. This implies the using of the contact of one finger on a depressed key with *full-arm* weight as a preparation and aid in control for following tones, the hand being turned and the fingers being lifted to allow the hand to fall fully relaxed from one key to another. In this case the cushion grip is an important control-device, and therefore invaluable in conquering nervousness. Here the gradation of arm-weight is not altered as in the first example, but the full arm rests on the finger tip through a loose wrist, and if the speed of depression of the key remains constant, that separate individuality which persists in each finger is eliminated and the tones may be matched as in a string of pearls.

So much for the conservation of energy as an interpretative "balance-staff."

Anticipation

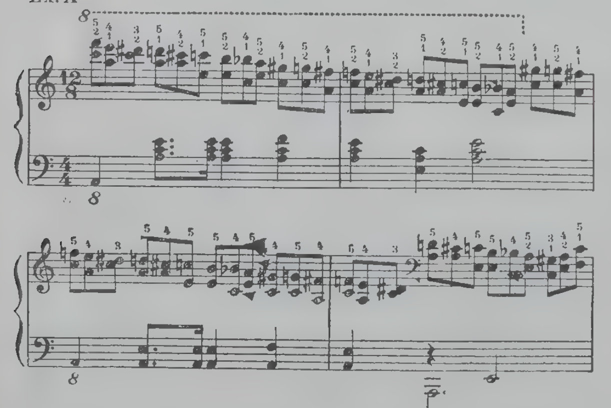
Forming the hand in the position of the figure to be executed (in running passages) is an important point in the development of clarity and speed, and even tends to more reliable memory playing. This means the physical *anticipation* of as many notes as possible in one position of the hand, and so on with each advance of the hand until it is possible to map out whole compositions according to the changes of position of the hand. It is an efficient method which reveals many unnecessary motions and is its own solution for the elimination of these effort-wasting actions.

"Efficiency" has been much discussed; but it is only seldom that one sees a pianist's technical equipment so free from "lost motion" that one is conscious of each motion counting. A teacher or coach should be an "efficiency expert" who surveys the machinery so critically that the unnecessary movements may be pointed out and the student encouraged to bring to bear, at an early stage, just such a critical attitude when working out a technical difficulty.

We even go so far as to insist that pupils analyze technical difficulties and provide a solution before a first keyboard reading, and we always advise a *silent* mapping out of all mechanical actions before attempting execution. By silent mapping out is meant keyboard-graphics *without* depressing the keys—the taking of the positions in order. It then becomes possible for one mental impulse to prompt the entire motion-outline, while the execution of the individual notes gets to be (with practice) almost reflex.

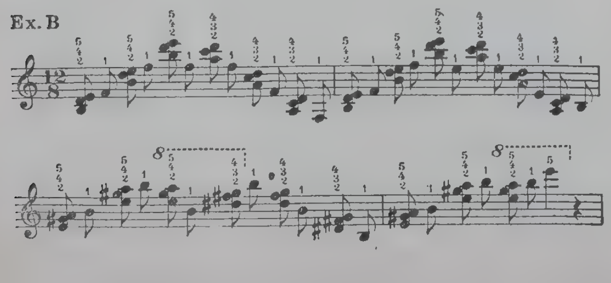
An example would not be out of place, and the "Winter Wind" Etude, by Chopin, profits at once by this method. Learn the Etude as a whole. A pupil is usually surprised when requested not to touch the first four measures until the main body of the Etude is learned; and especially when told that it is because these are more difficult than all the rest put together, he invariably "registers" astonishment. But it is! The sinister, bleak, quality of tone comes more as a result of prayer and fasting than from the analysis and subsequent intelligent employment of keyboard motions, which is the answer to the difficulties of the Etude proper. In a word, there are only two motions necessary in the whole preparation. One, as set forth in the first four measures, and the other in the next four measures. If the Etude is worked out on this simple plan the memory is an effortless possession and the interpretation becomes a simple distribution of dynamics and use of rotary motion. From the main body of the Etude, measures 1 to 4 serve the Minimum Practice Plan.

Ex. A



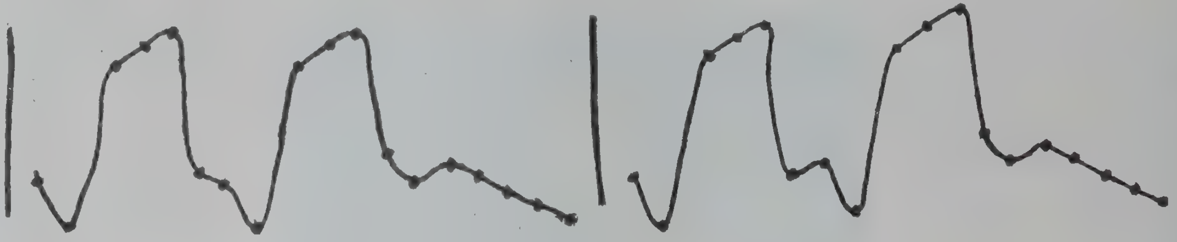
Then measures 5 to 8 may be used in the same manner.

Ex. B



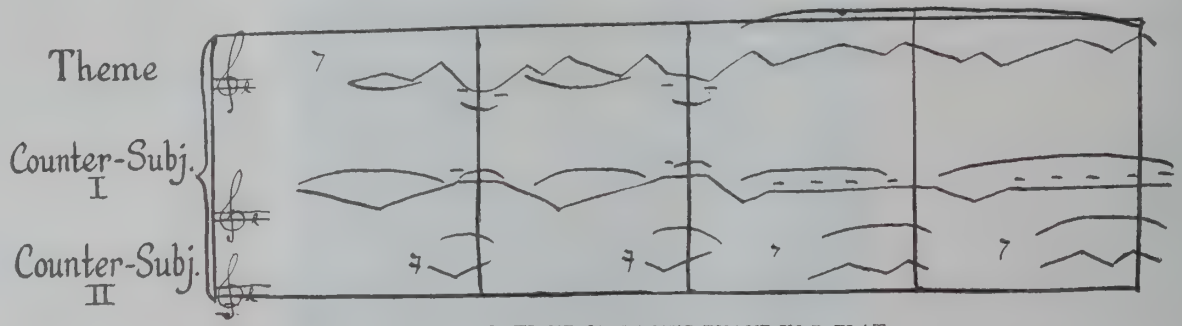
How universally employed and how carelessly reckoned with! The truly great pianists of all times, whether they so termed it or not, habitually practiced it; and when we pause to think, how indeed could there have been endurance without it?

The *relaxed* hand and arm rests on the fifth finger with the thumb up. Immediately on placing the hand in A-flat *playing* position, the forearm muscles are twisted. Only by untwisting and twisting these muscles can the state of being "muscle bound" be avoided. Of course, after the good habit is formed, this combination of motions is so rapid as to be practically imperceptible, but I still find the slow, exaggerated practice of rolling the hand from one side to the other to be a sure cure for the fatigue so common in such compositions as the one under discussion—Chopin's Opus 25, No. 11 A feeling in the upper arm like so much jelly shaking is the best proof of its complete possession.



EX. C.— LINE PICTURE OF CRAMER'S ETUDE XIII

After the simple blocking out of the first technical problem, and when it has been successfully applied to all passages of parallel design, to the point of natural memorization; when the good habit of placing each finger on that part of the key most conducive to the even flow of the complete whole has become a matter of course; then, and only then, the student should begin to play the work as written, bringing to bear all such knowledge as distribution of arm weight, degree of finger height, and that finely strung rotary motion, which, in the final analysis, is the answer to the endurance required.



Ex. D.— A GRAPHIC OUTLINE OF BACH'S FUGUE IN B FLAT.

To work in this manner makes that ideal, set out in the first part of this article, possible. An intelligently conceived, finely balanced re-creation is the resultant, and not the sprawling, puppy-like exhibition of energy that one is used to associating with the student's efforts in this work and which fairly bulges out of the frame in its exuberance.

Graphic Outline

Another aid is especially helpful to pupils who say "I just can't memorize!" And while it is not exactly under the head of Keyboard Motions it is suggestive of them; namely: mapping out compositions according to a graphic *outline*. Take the Cramer Etude No. 13 for example; a study in beautiful curves, broken chords, harp-like in timbre, and, if played up to tempo, a delightful encore, by the way. When the design is sketched out by a single line on a piece of paper as it looks and sounds in the mind's eye and ear, it is surprising how such a simple plan is visualized by one who "just can't remember."

Of course, it is not necessary to make a literal diagram of *every* composition under study. These examples are offered merely to illustrate the mental process of one who thinks habitually in terms of phrases and groups of phrases. We have often been asked if, when reflecting on a composition mentally away from the keyboard, the individual notes are thought of according to their letter names. These diagrams are an answer to just that question which exists in the minds of students, and if considered intelligently should facilitate matters. Not notes as such, but their rise and fall, to and from each other, is the idea. Here is a veritable one-line picture of the motion outline of the Cramer Etude XIII.

See accompanying example C.

This suggestion has been of real help in taking up a first Fugue of Bach. In contrapuntal playing it is sometimes very difficult for a pupil to develop the ability which equals that independently uttered finish which the individual members of an orchestra contribute to the ensemble of voices. The pianist must not only be the conductor but the separate players; and a suggestive idea which holds the mirror to the separate line of musical thought is not without its value. We find that in fugue playing this picturing of the tonal rise and fall not only assists in memorizing but also makes for that final coördination.

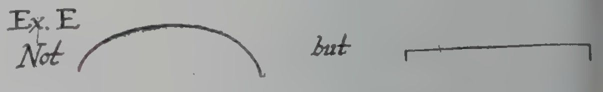
Here is a "graphic" of Bach's *Fugue in B-flat* from the "Well Tempered Clavichord."

See accompanying example D.

To get the full import, compare this map with the respective passages illustrated, and note the accuracy of the tonal rise and fall. The vertical lines are, of course, bar-lines; and the first two lines of each staff are indicated at the left.

And lastly, as the Efficiency Expert, leaving his field of inspection, looks over his shoulder and sees a gear or so that could be dispensed with and so increase the speed or power of the factory, *we* recall another unnecessary and ineffective motion.

Ex. E



Best illustrated in the skips beginning with the 27th measure of the Chopin "Berceuse" and the finale of the *Mässig* of the Schumann Fantasie, we find a tendency of the hand to inscribe an arc with each group of two quavers when, by keeping the hand as nearly parallel to the keyboard as possible, a greater speed is evident and a "sure-fingered" sense provides wings for the beauties awaiting release.

See accompanying example E.

Uncertainty which always betrays itself in timid tone or careless inaccuracy fades into that surety which allows the listener to sit back and relax in the feeling that here at last is a Tone Pilot who will not wreck one's trusting sensibilities on the Scylla or Charybdis of dissipated effort, but who carries all with him in focused powers.

Self-Test Questions on Miss Buell's Article

1. *What relation has breathing to piano playing?*
2. *How shall we develop Climax in interpretation?*
3. *How shall we provide for "reserve power"?*
4. *What value has "pianissimo" in interpretation?*
5. *How can the "graphic outline" be made useful in studying a composition?*

Infinite Pains and Genius

By D. X. Kyrbi

Blessed are the diligent: truly, they have their reward. The one whom the world has acclaimed a genius has invariably possessed this quality. Only the very few seem to have that inner urge to master minor details. Industry, persistence and dogged digging are the price of really first-rate achievement.

Mrs. E. D. E. N. Southworth has left record that she re-wrote forty times a single sentence of one of her novels. The enthusiast who engaged a hotel room next that of Paderewski, with the hope of a treat in the way of a rehearsal, was chagrined when the great Pole spent on but two measures his usual hour and a half of practice.

Have you developed a thirst that will be quenched only when the last source of knowledge about the study in hand has been exhausted? Are you willing to lay down a task while there is yet a detail which you have not mastered? Where do you catalog yourself?

What Studies Shall I Use?

By HARRIETTE BROWER

A YOUNG teacher, but recently entering the profession, desires advice of the kind and number of études to give her pupils. The subject of étude-giving evidently oppresses her, for she has tabulated a list of those she considers most necessary and worth while, and she is anxious to know whether she ought to use the large books entire, or make selections from them.

The list she sends includes: Behrens, Op. 61; Bertini-Germer; Burgmüller, Op. 100; Clementi, "Gradus;" Cramer-Bülow; Czerny-Germer; Duvernoy, Op. 120; Heller, Selected Studies, and Köhler, Op. 300, two books. The teacher adds, she is a novice in piano teaching, and for this reason seeks guidance in selecting material.

A desire to help the young teacher lay uppermost in the answer sent her. Be not troubled about how many and how difficult études to give the student, we counselled. Think first and always of the principles to be taught and illustrated. These are of the first importance. Études are sometimes like medicine, only to be administered in special cases and for particular disorders. When the player understands principles of tone-production, weight and relaxation, many études are a weariness to the flesh and a waste of time. And time is too precious to be wasted. How much better to put time on repertoire and have something to show for it in the end.

Now the principles which underlie good piano playing are not difficult to learn. They can be taught so simply and directly that a child of six or seven years can understand, if they are presented in elementary form. Or they can be so presented as to meet the need of the advanced player who has neglected this indispensable part of his musical education.

Fundamentals

Before the student should attempt to play études such as those mentioned above, he should know the meaning of Condition, and recognize when his arms and wrists are stiff and when they are relaxed. To understand the condition of arm relaxation, raise the arm and extend it on a line with the shoulder, the hand at the same time hanging limp from the wrist. Now let the arm fall at the side, of its own weight, quite limp and relaxed. If it is in this condition, it will rebound from the body a couple of times. Repeat this test fifteen or twenty times daily. One must have the mental concept of arm relaxation and sense the *feel* of it. Exercise each arm equally in this test.

A child who is attentive can be taught this sensation and condition and often acquires it with more ease than the older student steeped in old ideas of stiffness.

The Next Steps

The next steps are: Hand Formation and Finger Action. These can best be explained and taught at a table, before going to the keyboard. It stands to reason that if the learner can not get his hand in shape or fails to make correct finger movements while undistracted by tone and tune, he never will be able to do them when he has a dozen other things to think of. The attempt to do the advanced things before one has taken the necessary steps leading thereto, is the cause of much of the poor piano playing we hear every day. One thing at a time in the first stages insures true progress. Furthermore, before attempting études, the student must be able to play a scale correctly and smoothly, both forward and backward. The ability to do so reverts back to foundation principles—to the slanting position of the hand, the passing of thumb under quickly and deftly, and the swinging of hand over thumb with equal facility. These preliminaries acquired, they must be put in practice in a four-octave scale, to gain evenness and fluency.

Since there are many chords to be found in études, the student must be prepared for them. Chords are not all played alike. Different touches are marked in the music, because chords are to be played either marcato, legato or staccato. Shall they be attempted in études or in pieces without preliminary practice?—without knowing anything about touches required for chords? No. The student is advised to study the "rotary arm" movement at the table, learning to hold the hand and fingers in shape for the desired position. The three fingers playing the chords should keep their shape when the hand is lifted off the keys, while the two other fingers are somewhat extended, so they will not hit other keys.

Beginning Etudes

Granted, then, the preparatory principles have been carefully taught and reasonably assimilated, the student is now prepared to apply them to an étude. For this purpose it is well to use the first four studies of Duvernoy, Op. 120. Étude No. 1 presents items of scale and passage figures, chords in *marcato* and *legato*, phrasing and single notes to be played with rotary arm movement. Put this little étude of two pages before a student, or a teacher of years of experience, and if neither has studied principles of arm and finger movements, the results will be stiff, angular and ineffective. On the other hand, the student properly prepared will find no trouble in applying precepts already learned and in making the étude effective and meaningful.

The second Duvernoy étude is a little more advanced than the first, in that the two hands are almost equally active. Here rotary arm movements are required for single notes with prepared fingers, phrasing movements, accurate finger action and the like. In slower tempo, the étude can be well grasped by a young student who has learned the fundamentals. Older ones, with more experience, can work up the étude to the required metronome speed.

It will be well to follow the second étude with the fourth and thus gain greater variety of material. Here we have broken chord figures. Have the student analyze these chords, an easy matter if he is trained to recognize chord formation. The first page is mainly made up of tonic, sub-dominant and dominant chords; the second uses a chain of dominant 7th chords and their resolutions which are very interesting to follow out. At the outset the idea may be more quickly grasped if the broken chord figures are played as solid chords, very slowly and carefully. One thing the student is bound to learn from this étude—the correct fingering for the four-voiced chord. Eternal vigilance is often needed to see that the student always uses correct fingers.

Advancing Steps

To go a step farther, take études One and Two of Czerny, Op. 299. These are in advance of the Duvernoy in form and execution. As generally used, however, they are just "played through," and the learner passes on to the next and the next. Not in this way will they do the most good. To get the greatest benefit, work them up to the highest speed of which you are capable. Play the two as one étude, with the metronome at four beats to the measure and afterwards at two beats.

After these have been mastered, take up Czerny, Op. 740, études 1 and 2, and treat them to the same process. In fact, all the eight études mentioned so far are to be memorized, worked up to speed and played as concert pieces, with all necessary velocity and finish.

The Musical Study Problem

The problem of selecting Etudes, or musical studies, is an old one. It has been discussed many times in this publication. Some teachers eschew Etudes entirely, just as others eschew exercises. On the whole, we should say that the great majority of the best teachers of the times use Etudes and exercises liberally but judiciously. No one in these days thinks of playing all of Cramer or all of Czerny; just as no one thinks of reading all the "want" ads in the newspaper. We select what is most useful. For this reason Graded Courses of Studies, selected by experts, have become widely used. Realizing this need, the publishers of THE ETUDE *have prepared a 24-page booklet for free distribution, listing most of the most desirable standard teaching-pieces, studies and exercises. The list is arranged in 10 grades; and any* ETUDE *reader may procure this booklet upon postal application.*

Do you not think this is a more satisfactory manner of studying études than the usual one of ambling through book after book of them, and not bringing any one up to concert pitch? And also, is it not better to acquire technic constantly through scales, trills, chords, octaves and arpeggios, thus building up an all-around mechanism which will serve you to master advancing repertoire?

The Crux of the Matter

The question resolves itself into this: If piano technic must be learned from études, then the student may need to go through a great many, yet even then he may not attain the desired results. If, on the other hand, technic is studied for itself, outside of études and pieces, many études can be eliminated. Indeed, only such études as illustrate fundamental forms are absolutely necessary.

Of the making of études there is no end. Mr. Huneker, in one of his books, enumerates them by the hundreds. One would need several earthly lives to go through them all. And to what end? Is not repertoire more to the student than masses of études?

Opinions of Artists and Teachers

What do some of the present-day artists think on this subject? Listen to Erno Dohnanyi, a master teacher, as well as a great pianist. He said to the writer:

"Much valuable time is often wasted on études. Students seem to think the greater number of études they go through, the better players they will be; whereas they would much better put their time on mastering repertoire. What masses of études have been written! Their name is legion. Von Bülow edited a book of fifty Cramer Studies, selecting those he considered the best. But while the player is learning these, he could put in the time to more advantage on pieces of value, which would add just so much to his repertoire.

"Some of the études are nice, but we have grown away, in these days, from the older ways of study. We do not need so many études, nor do we use them in the way a past generation did. If you speak of Chopin's Études, that is another matter. Chopin Études belong to the repertoire of every pianist; indeed, they are not études at all, but beautiful works of art. In them one finds every form of technical problem necessary for building up a virtuoso pianism. Of course, they are not for the immature student; all who attempt them and hope to master them, must be prepared through the practice of scales, chords, octaves and so on."

Master the Fundamentals First

Alfred Cortot, the French master, said:

"I do not approve of using a great many études; rather select passages from them, which present original problems, especially suited to one's needs."

Sigismond Stojowski, in discussing this very subject, remarked:

"I give very few études, and those I do use I administer in homeopathic doses. It is not necessary to play through a mass of études to become a good pianist. Much necessary technic may be learned from the pieces themselves, though scales, arpeggios and other technical forms should form part of the daily routine."

Other artists have expressed much the same views. It *is* an old-fashioned idea to stuff the student with quantities of études, though a few, thoroughly mastered, will be beneficial. We live in a more rapid age than the former generation, and want to get at the heart of matters more quickly. Master the fundamentals first, and then you can play any number of études. But, having mastered the foundation, you will be all the more eager to build—not a repertoire of études, but one containing masterpieces of classic, romantic and modern music.

The truth goes deeper. You speak when you play!
Labor and love, and moments of sweet ease,
Pain, pity, trouble, care, perplexity—
All the abundant living of the day
Flows through your fingers to the waiting keys,
Then to the trembling wires—and thence to me!"

Virtuosity Discounted in England

Virtuosity for virtuosity's sake is ridiculed in England. This is perhaps a heritage from Mendelssohnian traditions. When Mendelssohn founded the Leipsig Conservatory he surrounded himself with a coterie of conservatives—extremists—to most of whom a pianist of the Liszt or Thalberg type was a curiosity more than an artist. Indeed it was very hard for Liszt to "live down" his pianist virtuoso reputation, even among those who realized his greatness as a composer. The Mendelssohn cult had a great influence upon England, particularly through Mendelssohn's English disciple, Sterndale Bennett. For years the splurging pianist who kicked up a rumpus at the keyboard, regardless of its musical worth, had very little chance of meeting with success.

This form of virtuosity, which was so popular at one time in America, is rapidly being displaced here from the popular favor of the serious minded.

The Origin of Creole Rhythms

By Joseph George Jacobson

While penetrating the little known jungle of the Guianas, South America, I stayed for a long time among the indigenous Ukas. Their queen was named "Sabi-a-Sani," which, freely translated, means "She Knows a Thing or Two." This tribe lived on the Marowyne River, the boundary between French and Dutch Guiana. While staying here for several months I found a little harmonium, but nobody could play it. It had been brought up the river years before; and the tribe called it "the noise-maker." I told them I would play it; and about four hundred men and women gathered around the instrument expecting "Aubiah," or witchery. I played medleys of Chopin, Bach and others, and the audience was extremely appreciative.

The rhythm of these people is wonderful. The Ukas are descendants of runaway slaves imported from Africa, who brought with them their complex rhythms and the drum-music by which they transmit news and signals over large distances. When the negroes came in contact with the Spaniards in the West Indies, each went into raptures over the music of the other; and thus were laid the foundations of the Creole songs and dances of which we have such an overdose of bad compositions. The *Habanera*, not to be mistaken for the *Tango*, which is really the name only of a negro dance, is most fascinating. We know the rhythm well from *La Paloma*, and Bizet used it in "Carmen." The Tango originated in the West Indies where it was danced only by the lowest class, deriving its name from the African "Tangana." A few years ago it found its way into Argentina, but again was danced only by the plebs. Straight from there it was brought into our salons.

Use the Dictionary

By Will Cowan

Intelligently begun is half done. And this applies as much to practice as to any other undertaking. Knowing precisely what one is trying to do means that the goal will be reached much more directly.

Just because this is so, the student should not think of beginning practice without a good dictionary at hand. No one interested in music study need be without one of these when very satisfactory ones may be had for twenty-five cents. Of course, the larger ones are better.

Do not attempt "studying the dictionary." Before starting practice on a composition—either study or piece—look through it carefully for any unfamiliar sign or musical term. Become quite familiar with the significance of each of these before daring to touch a note on the instrument. Thus you will realize *how* the composer desired these notes to be executed, and will derive multiplied pleasure from trying to do them so rather than merely sounding notes.

By this method a practical vocabulary will soon be mastered so that the use of the correct interpretation of the musical terms becomes a natural part of reading the notes. Then, all good dictionaries have lists of composers' names with pronunciation, their nationality, the dates of their birth and death.

Thus will the foundation of good musicianship be laid. The days of the finger-musician are in the past. The one who cannot talk intelligently about the principles of his art or cannot answer clearly the simple questions about its notation and terminology, is doomed all too often without playing a note.

Bernhard Hamblen

Bernhard Hamblen, whose songs have achieved exceptional success during recent years, was born in Yeovil, Somersetshire, England, July 14, 1877. His general and musical education was received in England. For some years he has lived in the United States, and is one of the few men whose compositions have produced such a large revenue that he is enabled to devote all his time to writing.

Mr. Hamblen's most recent works are "His Almighty Hand" and "Sunshine in Rainbow Valley."

Among his previous successes may be numbered, "Smile Through Your Tears," "There's a Song in My Heart," "Cast Thy Burden," "The Still, Small Voice," "Oh Light of All the World," "Remembrance," "The Rolling Stone," "Roses of Memory," "The Silent Legion," "Little Voices Calling," "Little Curly Head," "Oh Troubled Heart, Be Still." "His Almighty Hand" will be found in this issue of The Étude.

Mr. Hamblen's music has had such an unusually wide appeal that he was invited to give his opinions upon the reasons for the success of a song. We are very happy to present them herewith. These ideas embody so many common-sense principles that we recommend them to all our readers who aspire to compose songs.

"So much has been said and written concerning the psychology of 'successful song writing' that further comment seems superfluous; but, having been asked for an opinion on this widely-discussed matter, I humbly offer the suggestion that the indispensable ingredient in a 'big seller' is *emotional reaction* not *mental satisfaction*.

"In other words, the vast majority of the great song-buying public are more responsive to simple, fundamental 'heart appeal' than to intellectual stimulus; and that is why a lyric of human sentiment (not necessarily sentimentality) and a flowing, straightforward tune which helps to express and fix that sentiment in the *average* musical mentality, have a greater vogue than a composition which is impeccable from the academic standpoint, but which lacks emotional simplicity.

"Music is inspiration plus mathematics, *not* vice versa. Every law of the theory of composition can be learned by the diligent student, but there never lived the person able to impart or to acquire what is known as the 'gift of melody.' Practice in composition will improve and broaden one's powers in this direction; but the germ is a bequest from another sphere. It is a well-established fact that certain proficient composers whose works bring them reputation but little financial gain, have decided, in sudden realization of the irony of such a situation, to write something more popular and more commercial; and, naively believing in their ability to make money in this way, they submit a simpler composition which, because of their reputation, is eagerly accepted for publication.

"When the song has proven an absolute failure, which is frequently the case, such a writer never dreams that he is incapable of producing appealing work of this type because, in his determination to 'reach the masses,' he has, either consciously or sub-consciously, 'written down' to his idea of the required level, and the composition is therefore insincere. He does not realize that the success of a simple song involves sincerity, perhaps to a greater degree than is demanded by the more advanced work.

"I need scarcely say that these remarks are not condemnatory of the more academic song which is sincere and *means something*. I love such music more than any other; but I am convinced that the ability to write a 'big seller' is a gift and not the result of inferior musical education, though the latter belief is held by many persons of superior mentality whose very burden of musical knowledge has swamped inspirational stimulus and heart appeal, if they ever possessed them."

A Two-Against-Three Exercise

By Francis Kendig

In spite of "reams of writing" and "tons of talk," many musicians have never learned to play "two-against-three" smoothly, even in slow tempo. It should be so mastered that a pianist who encounters this combination can go right on without breaking either tempo or rhythm.

Here is a little exercise which has been, both to myself and to my teacher-students, of more value than almost any piece in our repertoires.

Theory of the Rhythm

Before the exercise can be played smoothly a mental understanding is all-important. As six is the smallest number into which both two and three can be evenly divided, count six.

*   *
1 2 3 4 5 6
*   *   *

Unless absolutely strict and even time is kept, the exercise is of no value. This rhythm, with a note played on counts 1, 3, 4 and 5, equals  . The teacher may clap

>   \>   \>
1 2 3 4 5 6

while the student claps

>   \>
1 2 3 4 5 6.

The ear will easily recognize the fundamental rhythm. This plan can be followed out with groups of students.

Then the player should tap on the table two eighth notes with one hand and triplet eighths with the other, and this till a considerable speed has been attained. After this has been learned, change hands.

At the Piano

First play the right hand, counting the entire line

*   *   *
1 2 3 4 5 6.

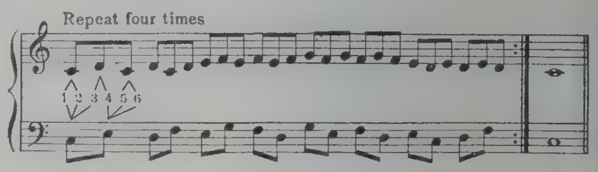
Then play the left hand,

*   *
1 2 3 4 5 6.

Then play the first three notes of the right hand, followed by the first two of the left hand, and then slowly put them together.

The exercise should be practiced at all speeds from *largo molto* to *allegrissimo*, and in all keys. To transpose, place the five fingers over the first five scale notes of the new key. The fingers should rest lightly on the keys and the hands are held quietly at all times. The closer the fingers are held to the keys the easier a smooth and high rate of speed will be obtained.

The exercise follows:



Double value may be derived from this by inverting it; that is, play the notes on the upper staff with the left hand and those on the lower staff with the right hand.

Is "Bach" Dull?

By Sidné Taiz

It all depends upon the method of approach.

Many a young student has had born in her soul an "eternal hate" for this most genial master, because his works were not presented in a manner to make them attractive to the juvenile understanding. Why should his music, so full of vitality and musical interest, ever be given as technical studies!

What one of his works—great or small—is not built upon an interesting subject? Not one of them but has a pleasing little tune as its "theme."

Get the pupil thoroughly acquainted with this, by either playing or singing it, or both. Then set her out on a "chase" to follow this throughout the piece. Even small children grow thoroughly interested. It becomes something of a "game" to them; and, with a little enthusiasm on the part of the teacher, they are soon so deep in it that they are asking for "more Bach." His little dances and other movements have thus become the key to his whole domain.

"Grand opera, light opera, musical comedy, music drama, ballet, revue—we seem always in the theater to be seeking some form which will achieve a true marriage between music and drama."—Horace Shipp.

How Famous Virtuosos Hypnotize Audiences

By H. ERNEST HUNT

Author of "A Manual of Hypnotism," "Spirit and Music," "Music Makers," etc.

Hypnosis is an extraordinarily interesting and informing study, and it has been of vast use in the investigation of the realm of mind as the telescope has been in the stellar universe and the microscope in the world of the infinitely small. But just as the telescope and the microscope need very expert handling, so the actual practice of hypnotic experiment should be left to the medical expert and the psychic researcher. It is not a safe subject in which to dabble; and it certainly ought not be used for show purposes or for entertainment. Doctors on both sides of the Atlantic are using it for legitimate healing purposes and it is found to produce remarkable results; but its utility for the average person lies chiefly in the store of information that it yields as to the workings of mind.

The Conscious and the Subconscious

There are in all of us two departments of mind, termed conscious and subconscious. The former is the active department, the wide-awake part that looks after our everyday affairs and gets in all the information of the world around. It is the male element of mind, looks after the business end of things, and is chiefly concerned with the intellectual side of life. It also displays another male characteristic in acting as a protective influence over the other department, as well as doing all the planning, directing, and controlling.

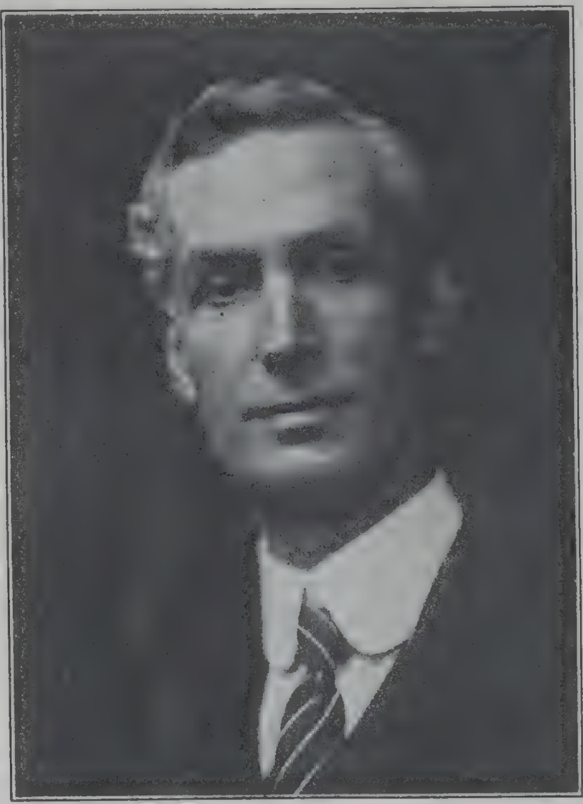
The subconscious department, however, lies behind the scenes and gets very little notice and scarcely any thanks for all the work it does; indeed, although it is always with us we know comparatively very little about it. It plays a more passive part in life, staying at home housekeeping, taking charge of all that the consciousness brings back from its travels; it tidies up, sorts out, and classifies all this information. It is the emotional partner supplying the female element of love to be the counterpart of the male wisdom. It is ever receptive, very obedient, and like most of the fair sex, quite unfathomable, containing depths beyond depths that baffle all our diving. These two parts working together make the perfect mind, and either without the help of the other would be sadly incomplete.

Hypnotism is directly concerned with the working of these two departments of mind, and the parts played in hypnosis by the operator and his subject respectively are precisely those taken in ordinary life by the conscious and the subconscious. The subject, however, has both a conscious and a subconscious department, and since the operator wishes himself to direct and control the subconscious mind of the subject, he gets rid of the conscious and protective element by the simple process of putting the subject to sleep. The subconscious of the subject and the conscious mind of the operator then become practically one mind, and the operator can control and direct the subject much as he pleases. In this sleep state the emotional element in mind is much enhanced, while the reasoning and intellectual processes are correspondingly diminished.

Have You Ever Hypnotized Yourself?

The process of putting to sleep is accomplished by the general quieting of all the senses by the absence of distractions, and then by the monotonous stimulation of any particular one of the senses; this induces a sense of strain, fatigue, or languor, and then the subject drops off to sleep. If the operator forgot or omitted to wake him he would simply sleep it off, awakening some time later as from a natural slumber. We get this same monotonous, sleep-inducing fatigue in listening to the throb of machinery or of a locomotive, in listening to the ticking of a clock, or sometimes in having to endure an uninteresting sermon, sometimes also in having the eye caught by the gleam of an electric light bulb just above the comfortable line of vision.

When a person is to be hypnotized (and by no means all persons can) he must be willing and expectant, and the element of faith is highly important; really he half hypnotizes himself. If the hypnotist has a great name and reputation the element of faith is thereby intensified: and the results are more easily produced. If he be impressive in manner and appearance, displaying complete command and assurance in his methods, he is the more likely to be successful with his receptive subject. No diffident, apologetic or hesitating individual can be a successful hypnotist, and certainly no bungler can succeed; for the subject though apparently asleep is really acutely sensitive and keenly alive to things that might pass unnoticed in his normal condition.



H. ERNEST HUNT

What Hypnotism May Do

We have most of us built a wall of limitations around ourselves by the limits of our past thinking, so much so that we have lost sight of the real capacities and powers that we all possess. When a person is hypnotized these limitations can be cast off completely at the suggestion of the operator, so that the real abilities manifest themselves. In the physical way, for example, if a person normally can lift a weight of, say, one hundred and fifty pounds, when he is hypnotized he can lift three hundred. Hypnosis does not add one jot or tittle to his powers; it merely relieves him for the time being of his limitations; and when he comes out of his hypnotic sleep and awakens his normal self once more, back he finds himself at his fifty-per-cent. normal again. In much the same way mental and emotional powers are enhanced, and new and frequently strange abilities show themselves. But the important thing is that these powers and abilities are there already, only the occasion has hitherto never liberated them.

All this time we have been working up to our illustration of the way in which corresponding forces are operating in the case of great musical artists and their audiences. The performer is always the positive and radiating influence and the active partner in the proceedings, while the audience is the negative element, receptive, passive, and willing to be influenced. We may even say that they expect and hope to be influenced since it is for that purpose that they have paid their money. As a consequence an invitation audience, or one that has come in on free tickets, is never so receptive and helpful. Its individual members are more apt to be critical and inclined to "look the gift horse in the mouth," because they have staked no money on being either interested or amused.

Working on the Emotional Element

Having gained an audience it is now the business of the performer to get his influence playing upon the receptive minds before him, and in music especially he is working particularly on the emotional element. He seeks the conditions that are favorable to this influence; the lighting arrangements are subdued, the hall is quiet, and the seats are comfortable. Previous advertisement has worked up the faith and expectation of the audience; and if the performer be fortunate enough to have a great reputation and be well spoken of then this precedes him and does a great deal for him before ever he appears on the platform. It increases the element of faith just as do the hundreds of glowing testimonials wrapped around the bottle of patent medicine. Where there is no faith it is extremely probable that—as nearly two thousand years ago in the case of the world's greatest artist—there will be no mighty works. But if the artist already has a throng of expectant and faithful followers he is fortunate, indeed.

Music has extraordinary effects upon people, varying in a remarkable way with the individual; it is not too much to say that in some cases the performer, with the aid of the fine music he may be interpreting, lifts his audience out of themselves and into the "seventh heaven." In such cases all the limitations of ordinary consciousness have been broken down, and they have been given a glimpse of their real untrammelled selves and a suggestion of fine powers that in the long future of the race will be truly at the command of humanity. Then when the music ceases and the wizard spell of the musician is over, back they come once more to solid earth and creep again into their olden limitations—far less than fifty per cent. of their emotional possibilities. With this they must then needs be content until some other wizard comes and sets them free, or else until they learn something of the conditions by which they may attain their own freedom.

Audiences "Carried Away"

Many people will frankly tell us that they have been in a state of ecstasy, right out of themselves, that the visible world has been blotted out, that space has vanished and time has lost its meaning. Others again will assert that they have been in a trance from which they had no desire to emerge. Others again are filled with exhiliration and emotion which sustains them for hours after the performance. Some again have their physical processes so stimulated that they come away from a concert feeling downright hungry, while others may be moved to tears. Are not these conditions and sensations strangely and suggestively similar to those which the sleeper experiences under the suggestion of the hypnotist?

Another curious point that emerges is that as in hypnosis, there sometimes appears a great exaltation of the powers of the senses. This extends even to the disclosing of a range of what we may call super-normal sight. We are all of us surrounded by a personal atmosphere, or "aura", which Dr. Kilner, late Electrician of St. Thomas' Hospital, London, England, has shown to be visible to the trained normal sight by the aid of certain chemical colored glass screens. This aura surrounds the individual like an egg-shaped nimbus or cloud, varying with the development, the emotional bias, and the health: these variations appearing both in the size, color, and texture of the aura. We may believe that this is what the great painters have portrayed in the halos that they have depicted round the heads of Saints, for the painter-artist being also a sensitive personality and painting his vision perhaps in a state of emotional ecstasy, would be in like case to our audience under the spell of music. In the case of truly spiritual individuals this aura seems to be self-luminous, and as a matter of fact we find a certain number of people who in the concert hall are able to see this haze of light surrounding the great artists; but they do not see it otherwise when their mental state is more prosaic. At times, should the performer be giving a truly spiritual interpretation of his theme, he may even appear lost in the blaze of light that surrounds him. Have we here a clue to that saying "Let your light shine before men that they may see your good works and glorify your Father which is in Heaven?"

Other people again, when their vision is "opened" in this hypnotic-like state of ecstasy, can see as it were the spiritual vibrations of sound surging and billowing round in great clouds of color which vary with the emotion and the rhythmic pulsations of the music. These remind one strangely of the clouds of incense "which is the prayers of the Saints" ascending up to heaven—for great music like great worship is a thing of the spirit.

When the Artist Loses Himself

Further, we may ask, what of the artist himself? How does he fare in all this proceeding? He is himself but a medium, a prophet, an interpreter of the high theme of spirit which runs through all worthy music; he is the channel through which the inspiration flows, and he gives out that which has been vouchsafed to him. There is an old saying—"the thinker and the thought are one"—

and it enshrines a profound thought. We might turn it to illustrate our musical work by suggesting that the great artist identifies himself with the music he interprets and loses himself for the time being in it. Performers have told us that this is literally true; they lose themselves entirely during their performance. The audience vanishes, and a state of super-consciousness seems to come about so that they are actually living in the heart of the music, which has woven its spell over them as well as over the audience. They tell us of a very real "coming back to earth" and an awakening out of a dream or trance state. Then our thoughts go back to the old prophet who said "whether in the body or out of it, I know not." Surely the significance is remarkable.

But hypnotism is a process which is intended to produce results. We have the depths of the self stirred; but not merely stirred—rather stirred to action. At the command of the operator forces may be set in motion in the body which result in the individual being made whole and restored to health and strength. So also after we have attended a concert of great music played or interpreted by a master hand, there stir in our soul these promptings to greater effort and achievement. The hypnotist puts the stirrings into very definite and concrete form in his suggestions; but the music speaks in more tenuous and gossamer tones and its message is less definite, yet none the less real. It bids us awaken the echoes of the spiritual in our lives; it bids us waken to the perception of new beauties; it brings us a little nearer to the Holy of Holies of truth, as we leave awhile the outer courts of the mundane world. It should fill us with kindliness and aspiration, and with an incentive to nobler endeavor; and then these should bear fruit in our lives. For otherwise we have but had our emotions tickled rather than stimulated. Impulse should result in action.

But when the great artist has sounded the call of his great music to us and has opened our vision, he has—as in hypnosis—given us a glimpse of great things and of our own larger self; and it is for us to answer to the call and to follow the gleam up the high hills of Spirit.

Self-Test Questions on Mr. Hunt's Article

1. *What are the two departments of the mind?*
2. *How do hypnotists put people to sleep?*
3. *What happens to a person hypnotized?*
4. *Name some ways in which music affects individuals.*
5. *Do performers "lose themselves" during performance?*

The Useful Triad

By Regina E. Wright

In teaching pupils of any grade, the triads and inversions in all keys will be a great help as a foundation for many things. I teach the scales first, building them up by steps, then the triads and inversions through the degrees of the scale and in the fourteen major keys. The difference between the major and minor triads is explained, having the pupil to play the three major and three minor triads, also the diminished triad, and learn to distinguish them when they are played, without looking at the keys. This is excellent for ear training and a preparation for forming minor scales, by counting down a minor third from the major keynote, using the same key signature, raising the seventh note in the harmonic minor scale and the sixth and seventh in the melodic minor scale, these two notes of the latter being played natural in descending.

The triads form the foundation for arpeggio study. The pupils are interested in forming common chords by adding the lowest note of a triad, thus: C-E-G-C, E-G-C-E, G-C-E-G, afterward playing them as arpeggios with the correct fingering up and down the keyboard in all keys.

When taking up a new selection the pupil always plays the scale, triad and inversions in the key in which the selection is written. They are not nearly so apt to forget the sharps or flats.

The practice of triads with a loose wrist prepares the hand for chord and octave playing, and also helps to train the hand to play with fingers rounded over the keys. The practicing of triads helps to avoid awkward fingering of chords. The hand is trained to fall naturally into the correct fingering.

It is so much easier to teach correct pedaling when the pupil has a knowledge of the triads. The pedal should be allowed to rise with each change of harmony, and usually the fundamental bass note should be held with the pedal.

The teaching of triads is so useful that it is included in the work of all my pupils, and especially to help those whose technic has been neglected.

To Acquire Speed With Accuracy and Without Hesitation

By T. C. Jeffers

The Slow Player

Many piano pupils of a junior grade may be quite correct in execution, but find it almost impossible to work up a rapid piece to the required tempo, especially in the finger passages. Even after assiduous practice the fingers apparently are too sluggish to move quickly enough; and, if a brief portion be played very rapidly, there is always a tendency to stick fast and hesitate, or to miss notes or play wrong ones at some place.

In such cases one should remember that behind the muscles are the nerves, and back of the nerves is the brain, or rather brains, for in this case there are two brains at work—the cerebrum and the cerebellum. You cannot *play* quickly and accurately if you do not *think* quickly and accurately; and unless the thought anticipates and prepares the passage *in advance* there is sure to be hesitation or inaccuracy. The mind may do this successfully at a slow tempo, but when a faster time is adopted, the thought is too slow and cannot keep in advance of the fingers; they overtake it, and a hesitation occurs. Or it may be that while the next passage is being mentally formed, the attention is relaxed on the passage actually being played. This may cause a stumble or some uncertainty.

Practice for Speed

Taking but one hand at a time, a short but difficult passage of a few notes should be selected and gradually worked up to a rapid tempo, in strict time, counting aloud. In practicing thus the notes should be arranged in *groups* and regarded as a *series of hand-shapes*. They should not be considered as single notes but as a group played by one hand-shape, the fingers of which must be poised over the notes in advance. This shifting from hand-shape to hand-shape should be practiced assiduously, and many times in silence, merely making the motions and assuming the shapes with lightning quickness, but without actually playing any notes.

Exert Your Will

Much determination and concentrated effort must be put forth in order to increase the speed quickly. The mind will not do this if it is allowed to jog along at ease. It must be *made* to do it. Strong pressure must be applied and maintained, or improvement will not come in a short time. Exert your will! And keep *on* exerting it!

After doing this for some time, and when everything is well coördinated (made automatic), the notes may then be *played*. In this way the fingers will be found to be directly above the notes which are to be played, which will be conceived of in advance, and thus no mistakes are so likely to occur, no matter to what speed the tempo may be gradually increased.

After this passage has been practiced a good deal a few more notes should be added, gradually increasing the grasp of attention, little-by-little, until quite a long passage is acquired. Then take the other hand in the same way.

Watch your hands, in their action in taking each new position, with the utmost concentration and intentness. Each shift and new position must be registered in the memory with absolute exactness if you wish to reproduce it each time rapidly, cleanly, and with certainty.

The truth is that the whole art of piano-playing may be condensed into this one sentence:

Know exactly what comes next!

Play With Meaning

And while you are doing all this, be sure to put the accent, the spirit, and the living feeling into the music. Never let your playing be *dead*, without characteristic effect, or musical *meaning*. Sing the melody in your mind—imagine it—while you are playing, in advance of your fingers. Feel it expressively, eloquently, passionately, as you think it, and let your fingers express that feeling!

Do not be a mere key-hitter!

Practice Skips With Shut Eyes

When the left hand is not certain in its skips to the low notes which form the pedal-basses, it is a good plan to practice these skips with closed eyes, with the left hand alone, at first, and then with both hands playing. When you always *look* at the note while playing it, you merely follow the direction of the eye, and have little or no sense of measurement of the *distance* by the mind. Practice with closed eyes, or without looking, educates the judgment of distance and makes the left hand much more accurate for that kind of difficulty. The left hand should be trained to feel and estimate these distances, and the exact location of the low note in relation to the notes immediately preceding it. Look at the two intently first, then make the skip slowly, without looking, several times. Imprint both the location and the distance on the memory. And keep on doing this until you make the skip with shut eyes with the greatest rapidity and certainty with both hands playing.

Improving Hand Stretch

By Watson Lyle

Supposing you, with ambitions as a soloist on the pianoforte or one of the violin family of instruments, had been given the alternative of hands smaller, or larger, than the average, to aid you in your work, which would you have chosen? Probably the large ones.

Yet, the probability is that you would have repented of your choice, judging from what has been observed in the case of players so endowed and who have realized that big hands can be a greater handicap to the executive musician than small ones. This does not refer to hands that are long, but not podgy. The ones I have in mind are really those big, unwieldy hands that occasionally present themselves for a word of hope from the teacher, and that have as much digital flexibility about them as the flipper of a sea lion! For them to attempt the rapid performance of passages in double thirds on the pianoforte is, as the Cockney says, "Arskin' for trouble." The plight of the fingers is apt to become analogous to that of the unfortunate twins, who, "as they were being washed by nurse, got completely mixed."

Those, and they are many, whose hands are smaller than the average, are faced with the problem of improving the hand stretch. If the problem is tackled in childhood, or quite early in adult life soon after adolescence, it may readily be solved. Indeed, under wise guidance, the young student, owing to the absence of rigidity of the hands, will probably never be aware of its existence.

For the question of improving the hand, stretch does not resolve itself merely into increasing the stretch between the thumb and index finger, or the thumb and the little finger. It is intimately concerned with an increase in the stretch between each pair of fingers, and especially with the increased flexibility of the hand itself, for it is there that set rigidity of the muscles most commonly exists.

Here is a simple gymnastic for the hands that will be found very useful in attaining this object. Raise the arms, together or separately, to a level with the breast, spreading them out naturally in semi-circular fashion. Open the hands to their widest extent, making the space between the fingers as nearly equidistant as possible, and the space between thumbs and index fingers as great as is comfortable. Elevate the fingers and thumb and so depress the palm at the base of the fingers. Hold this position for a second, concentrating mentally upon the movement, then suddenly relax completely, drop the arms to the sides, still relaxing all muscles, and after the lapse of another second, repeat the exercise. Do this ten times regularly, morning and evening.

The familiar dodge of placing corks between the fingers where they join the hand, with a bung size cork for the greater space between index finger and thumb, while the hand is slowly opened and closed, has also a value in improving hand stretch by loosening the finger joints generally, but it must be done carefully, and never to excess.

Those tried by the twin devils of small hands and tight stretches should, at the keyboard, devote special study to what are known as extension studies. In playing the arpeggi in these use a free rotary movement of the hand. And remember that it is the easiest possible thing to develop stiff wrist in an over-anxiety to strike big intervals and chords on the keyboard.

The Power of Music

What Great Minds Have Said About the Status of Music in Education

By M. FELICITAS

"THE duty of each generation is to gather up its inheritance from the past, and thus to serve the present and prepare better things for the future."—*Froebel.*

The status of music in education has changed with the changing motives that control education. The truism that it is an appeal to the emotional nature first, leads many to regard it as being merely recreational and incapable of possessing any influence but the production of pleasant sensation. One who seeks merely an emotional appeal will find it—he who seeks discipline for both heart and mind will find that also. Handel once was told by his sovereign, after hearing a performance of the "Messiah," that it afforded him much pleasure. The composer replied, "Your Majesty, I did not intend it to amuse or afford pleasure, but to make the world better."

Plato's Aspect of the Art

Plato among the Greeks, like Bacon among the moderns, was the first to conceive a method of knowledge. The "Republic," in which Plato forms the ideal State and emphasizes the duty of Rulers in regard to education, is the first treatise upon the subject. Education shall begin with music, he says, which includes the study of literature, and gymnastics. "Musical training is a more potent instrument than any other; because rhythm and harmony find their way into the inward places of the soul, on which they mightily fasten imparting grace and make the soul of him who is rightly educated graceful, or of him who is ill educated ungraceful; and also because he who has received this true education of the inner being will most shrewdly perceive omissions or faults in art and nature and with a true taste, while he praises and rejoices over and receives into his soul the good, and becomes noble and good, he will justly blame and hate the bad, now in the days of his youth, even before he is able to know the reason why; and when reason comes he will recognize and salute the friend with whom his education has made him long familiar."

Again in his "Laws" Plato tell us, "When any one says that music is to be judged of by pleasure, this cannot be admitted; and if there be any real excellence, but only that other kind of music which is an imitation of the good."

Ancient Greek Music was considered to exercise great sway over the mind, expressing noble sentiments, inculcating religion and morality, exciting generous feelings, inspiring patriotism and courage. Thus we can account for its effects expressed by Plato that no change could be made in music without affecting the constitution of the state—an opinion in which Aristotle acquiesced and which Cicero adopted.

How Aristotle Regarded Music

Aristotle, in his "Politics," classifies music as one of the four branches of Education. "The first question is whether music is or is not to be a part of education. Of the three things mentioned in our discussion, which is it—education, amusement or intellectual enjoyment? It may be reckoned under either, and seems to share in the nature of all of them. Amusement is for the sake of relaxation; and relaxation is of necessity sweet, for it is the remedy of pain caused by toil. Intellectual enjoyment is universally acknowledged to contain an element not only of the noble but also of the pleasant; for happiness is made up of both. All men agree that music is one of the pleasantest things, whether with or without song. As Musaeus says: "Song is to mortals of all things the sweetest." Hence, and with good reason, it is introduced into social gatherings and entertainments, because it makes the hearts of men glad. So that, on this ground alone, we may assume that the young ought to be trained in it. For innocent pleasures are not only in harmony with the perfect end of life, but they also provide relaxation, and, whereas men rarely attain the end but often rest by the way and amuse themselves, not only with a view to some good but also for pleasure's sake, it may be well for them to find refreshment in music.

Enough has been said to show that music has power of forming the character and should therefore be introduced into the education of the young. The study is suited to the stage of youth, for young persons will not, if they can avoid it, endure anything which is not sweetened by pleasure; and music has a natural sweetness. There seems to be in us a sort of affinity to harmonies and rhythms, which makes some philosophers say that the soul is a harmony, others that she possesses harmony.

The Power of Music

When the leader of a musical club commences to write a paper and the "sweet girl graduate" thinks of appearing as the school orator, they often select as the subject "The Power of Music."

The Etude has received hundreds of letters asking for material upon this subject.

It would take volumes to answer such letters. Our readers do not want trite little commonplaces from second rate minds. We could, on the other hand, give scores and scores of opinions upon the subject. M. Felicitas has quoted in the accompanying article a few of the writings of the great men in the history of education who have lauded music.

Perhaps the greatest means of expressing the power of music is to state that very few great men in history have failed at some time to pay homage to it.

At the present day music is the dynamo of hundreds of millions of souls, the world over. Never in the world's history has music been recognized as a great cosmic force as it is to-day.

We trust that this article, along with others that have appeared in The Etude for years back, will provide our friends with material for their essays upon "The Power of Music." In Praise of Music, by W. F. Gates, is an excellent book giving the opinions of the great about music.

And now we have to determine the question which has been already raised, whether or not children should be themselves taught to sing and play. Clearly there is a considerable difference made in the character by the actual practice of the art. It is difficult, if not impossible, for those who do not perform to be good judges of the performance of others. Besides children should have something to do; and the rattle of Archytas, which people give to their children in order to amuse them and prevent them from breaking anything in the house, was a capital invention, for the young thing cannot be quiet. The rattle is a toy suited to the infant mind, and musical education is a rattle or toy for children of a larger growth. We conclude then that they should be taught music in such a way as to become not only critics but performers.

Music in Quintillian's Time

In the "Institutes" of Quintillian, a proof of the importance of music in the estimation of the early Romans is found, where, after showing the necessity of instructing children in music, he adds that he does not desire that they should learn music so intermixed with wantonness that it may justly be charged with extinguishing manly courage.

Milton, one of the great educators of mankind, in the "Tractate on Education" gives music its place as a recreation and as an influence on character—"Convenient rest may both with profit and delight be taken up in recreating and composing their travailed spirits with the solemn and divine harmonies of music heard or learned; either while the skilful organist plies his grave and fancied descant in lofty fugues, or the whole symphony with artful and unimaginable touches adorn and grace the well studied chords of some choice composer, sometimes the lute, or soft organ stop waiting on elegant voices either to religious, martial, or civil ditties; which if wise men and prophets be not extremely mistaken, have a great power over dispositions and manners; to smooth and make them gentle from rustic harshness and distempered passions."

Shakespeare and Music

The great Elizabethan Poet, in one hundred and forty references in his plays, to music, voiced its beauties to the world. Shakespeare indicates not only an appreciation of the art but also a technical knowledge of it, a certain proof of which is his appreciation of harmony above melody. All the world loves a good tune, but it is given only to the elect to enjoy the intricacies of harmony and counterpoint. Again a proof of Shakespeare's technical musicianship is found in his knowledge of sol-fa-ing as cited in "The Taming of the Shrew" and "Two Gentlemen of Verona." No one but a singer would undertake the mastery of the cumberous nomenclature and phraseology.

Shakespeare's aesthetic appreciation of the art is evidenced by the praise given to it and the enthusiasm which it evidently excited in him. No greater tributes can be found than in his presentation of the psychical side of a character by its appreciation or non-appreciation of the art. (Merchant of Venice, Act V. Scene 1.) In "Julius Cæsar" (Act 1, Scene 11) he intimates that a lack of musical appreciation is to be viewed with suspicion.

Shakespeare's musical influence has been international and exerted upon composers of three centuries and the entire civilized world.

From a Great Educator

Comenius, who is recognized as the man who first treated education in a scientific spirit, and who bequeathed the rudiments of an educational science to later ages, speaks as follows in the "School of Infancy:" "Music is especially natural to us; for as soon as we see the light we immediately sing the song of paradise, thus recalling to our memory our fall, A, a! E, e! I maintain that complaint and wailing are our first music, from it it is impossible to restrain infants; and if it were possible it would be inexpedient, since it contributes to their health; for as long as other exercises and amusements are wanting, by this very means their chests and other external parts relieve themselves of their superfluities. External music begins to delight children at two years of age; such as singing, rattling, and striking of musical instruments. They should therefore be indulged in this, so that their ears and minds may be soothed by concord and harmony.

"In the third year the sacred music of daily use may be introduced; namely, that received as a custom to sing before and after dinner, and when prayers are begun or ended. On such occasions they ought to be present and to be accustomed to attend and conduct themselves composedly. It will also be expedient to take them to public worship, where the whole assembly unites in singing the praises of God. In the fourth year it is possible for some children to sing of themselves. The slower ones, however, ought not to be forced but should be permitted to have a whistle, a drum or pipes, so that by whistling, drumming or piping they may accustom their ears to the perceptions of various sounds, or even to imitating them. In the fifth year it will be time to open their mouths in hymns and praise of God, and to use their voices for the glory of their Creator.

"These things, parents, when singing or playing with children, may easily instil into their minds. The memory is now more enlarged and apt than previously and will with greater ease and pleasure imbibe a large number of things in consequence of the rhythm and melody. The more verses they commit to memory, the better will they be pleased with themselves, and the glory of God be largely promoted. Blessed is the home where voices resound with music."

Rousseau's Radical Attitude

In the eighteenth century, which was distinguished by activity of thought, Europe outgrew the educational ideas of the Middle Ages. Rousseau, perhaps one of the greatest of the educational reformers, was the first to base education entirely upon a study of the child to be educated, rather than on the knowledge to be communicated. In the "Emile," the exponent of Rousseau's philosophy, he states that in the first period of education, before the age of twelve, there are two subjects in which Emile is to receive instruction; music and drawing. Again there is ample proof of his serious consideration of the subject, evidenced by the fact that (at one period in his life) he contemplated adopting it as a profession. By bringing to the notice of leaders of thought in Paris his discovery of the notation embodying the principle of the movable Do of the modern Tonic Solfa and the use of figures as representations of musical notes, he hoped to make his fortune. But being unsuccessful, he directed his activity elsewhere.

Pestalozzi, who conceived of every child as an organism, and of education as the process by which the development of that organism is promoted, depicts, in "Leonard and Gertrude," the life of the Swiss peasantry, showing the causes of their degradation and the possibility of being raised out of it by education alone. In his educational design he lays special stress on the importance of two things, then and since much neglected, *viz;* singing and the sense of the beautiful. In the Pestalozzian schools singing found immense favor with both the master and the pupils. Hans Nageli (1773-1836), a composer and teacher of music, published a work called "The Theory of Instruction in Singing on Pestalozzian Principles" which greatly influenced the introduction of singing as a regular subject both in England and in the United States.

What Froebel Thought of Music

Froebel in his monumental work, "The Education of Man," regards singing among the chief subjects of instruction.

"A universal and comprehensive plan of human education must, therefore, necessarily consider singing at an early period; it will not leave it to an arbitrary, frivolous, whimsicalness, but treat it as a serious object of the school. Its intention will not be to make each pupil an artist, but to secure to each human being full and all-sided development, to enable him to understand and appreciate the products of true art. Art, as representation by tones, is music, particularly song.

"An early, pure development of rhythmic movement would prove most wholesome in the succeeding life-periods of the human being. We rob ourselves as educators, and we still more rob the child as pupil, by discontinuing so soon the development of rhythmic movements in early education.

"Much willfulness, impropriety and coarseness would be taken out of his life, his movements, and actions; and later on, there would be developed in him a higher appreciation of nature and art, of music and poetry.

"Even very small children, in moments of quiet, and particularly when going to sleep, will hum little strains of songs they have heard. This, too, has not escaped the attention of the observant, thoughtful mother, and should be heeded and developed even more in the education of little children, as the first germ of future growth in melody and song. Undoubtedly this would soon lead children to a self-activity similar to that attained in speech; and children whose faculty of speech has been thus developed and trained, find, seemingly without effort, the words for new ideas, peculiar associations and relations among newly discovered qualities.

"We should not forget, however, that this instruction —if in view of its representing the child's own life, it may be called instruction—should start from the pupil's own life and proceed from it like a bud or sprout. The boy should have the feeling, the inner life, before he receives the words or melodies.

"This is the essential difference between the instruction suggested here and that in which children learn mechanically small songs and poems coming wholly from without, neither arousing life nor representing it."

Herbert Spencer, while appearing to attach value to aesthetic culture and its pleasures, tells us: "As the fine arts and belles-lettres occupy the leisure part of life, so should they occupy the leisure part of education." The only possible interpretation of this thought, is that music, poetry and drawing may be taught if time can be found when all other knowledges are provided for. Since the sciences, which Mr. Spencer considers so necessary, might occupy a lifetime, where then shall we look for the leisure part of education?

The enthusiasm for the popular teaching of music, which was being felt so strongly on the Continent and in England, was not lacking in the United States. Under the leadership of Lowell Mason, who is well called the father of school music in America, work was commenced in Boston that led eventually to the adoption in 1837 of a resolution: "That in the opinion of the school committee it is expedient to try the experiment of introducing vocal music, by public authority, as part of the system of public instruction, into the public schools of this city." Parallel to the school work, Mr. Mason started an institution for giving concerts and preparing teachers, known as the Boston Academy of Music, established in 1832. Mr. Mason was strongly influenced by the teaching of Pestalozzi, and avowedly conducted his work on his system of teaching. The example of Boston was soon followed by such cities as New Orleans and Cincinnati, and there has been a steady advance towards the full recognition of music as a school study.

Culture and Utility

John Dewey, in "Democracy and Education," speaks of inconsistent treatment of music in education: "Music is theoretically justified on the ground of its cultural value, and is then taught with chief emphasis upon forming technical modes of skill. If we analyzed more carefully the respective meanings of culture and utility, we might find it easier to construct a course of study which should be useful and liberal at the same time. Only superstition makes us believe that the two are necessarily hostile, so that a subject is illiberal because it is useful and cultural because it is useless. It will generally be found that instruction which, in aiming at utilitarian results, sacrifices the development of imagination, the refining of taste, and the deepening of intellectual insight —surely cultural values—also in the same degree renders what is learned limited in its use. Education has no more serious responsibility than making adequate provision for enjoyment of recreative leisure; not only for the sake of immediate health, but still more, if possible, for the sake of it's lasting effects upon habits of mind. Art is again the answer to this demand."

The place of music in education is defined by Dr. T. H. Yorke Trotter of London as follows: "If we consider that Music is only a refined, pleasing diversion, or an elegant accomplishment, we must admit that its place in education can at best be only a very subordinate one. But if we take the view that art is the expression of what I may call the inner nature, that nature which feels, which has aspirations and ideals, which reaches out to something beyond the material needs of this world, we must claim for our art of Music a very high position in the scheme of education. For true education means the drawing out of all that is good in the child, the cultivation of all parts of his nature. And if we confine our work to one side of nature only, and not to the whole, we run the risk of starving what may after all be the most important part. For it is the feeling side of our nature that in the main supplies the motive power for action.

Artistic Instincts

If music is, as we believe it to be, the art which more than any other gives expression to the feeling side of our nature, it follows that is of the highest importance to use it as a means of education. Great works of music must be ennobling to those who can assimilate their meaning. And the study of music when properly conducted gives the student the power to enter into and appreciate the meaning of what the great composers have written. But this power of appreciation can be gained only by the development of the natural instinct. As a musician, *qui nil molitur inepte,* has said in dealing with the question of style in musical art: "It is not attained by science nor by scientific methods, but by development of a favorable artistic instinct." (Style in Musical Art," by Hubert H. Parry. pp. 315-16).

The development of the artistic instinct cannot fail to have an effect on the life of the whole nation. If by our manner of education we can cultivate and develop the inner nature of our citizens, we will be raising up a nation full of vitality, striving after ideals, and ever pressing on to higher and higher stages. Even the weariness of life which is felt so deeply by many of us, will disappear with our new ideals, for the art of music will give the means of self-expression, and will provide a new interest in life.

President Eliot's Vision

Among the many statements regarding music's place in education perhaps none is more forceful than that once given in an interview by the oft-quoted President Emeritus Eliot of Harvard, a synopsis of which follows: "A good music school gives an admirable training for eye, ear and hand, and imparts an accurate and faithful use of the senses. It is through a training of the senses to a high degree that the human race has attained all its most valuable knowledge including the applied sciences of the last hundred years. Music is not physical training alone, but also intellectual and moral training. It is by a wonderful coördination of the senses acting in common with the imagination and reasoning power that the great discoveries of the human mind are wrought out and put to the use of humanity. Music is not a mere recreation, a refined hobby. Actually it takes its place as an education—as a means of developing the human child, of drawing out latent powers, and enabling him to make the best of himself. So that far from being a special subject reserved for the children of the well-to-do, music is one of the very best things for the children who leave school at fourteen. A musical training is a child's birthright—though he may at present be deprived of it, nothing will more perfectly cultivate the human spirit."

Children are all eyes and all ears in a sense. Advantage of this must be taken in developing the imagination, which is clearly involved in thinking. What could be of greater value in this than the study of music? Every scientific discovery or artistic conception has been the product of the exercise of the imagination. The value of the original "Sistine Madonna" is not found in the canvas, in the materials used, or in the exquisite colorings, but in the original creative genius of a Raphael who could conceive it.

"All But"

By Everett Shepard

I HAVE a particular show piece that I like to play when I have company or am at a party. I know it perfectly, all but—*"all but" a certain mean passage that never did get cleared up.* After a dinner one evening I was called upon to play. Among the guests were two artists, one a pianist, the other a violinist. It had been my desire to play the accompaniments for the latter at some recital. So it was a chance to show what I could do.

I played my "show piece." I was getting along nicely when I remembered that passage—"All But." I had fully meant to take it to pieces and straighten it out. Here I was, my reputation almost at stake—for people do have a way of bragging about one's ability in a most embarrassing fashion.

I just had to play those awkward measures correctly—just had to. I felt weak for a moment, but, trying hard not to show it, I played steadily on, constantly dreading that "All But."

Then my will power asserted itself. I would play it right. I forced myself to do that difficult passage properly. I actually demanded that my fingers behave. Strange to say, they did.

The winter following I did the piano work for that artist. But I learned a great lesson that night. Will power can be used in music as well as it can be used in business. Try it!

Painless Practice

By Harriet B. Pennell

To the mothers of the coming musical generation who read the ETUDE for general as well as specific musical knowledge, the following idea may be of use in helping Mary or Johnnie along the hard road of piano practice.

In the course of a lesson to a seven-year-old girl, after she had played a tuneful exercise, I remarked, "That is pretty, isn't it?"

"O, yes," she replied with enthusiasm, "Mama thought it was so pretty she wanted me to play it for her *ten times!"*

This was a more effective way than if mother had said—"Now, Mary, you don't know that very well. Keep on practicing."

A little diplomacy will often get results with children where a great deal of stern advice would be a waste of words.

Everyone responds much more readily to praise than to censure.

Find Your Orbit—Shine Therein

By Alfredo Trinchieri

Wagner (Sipping his glass): But why then, my friend, do you not also yourself write music-drama?

Brahms: After you, it is impossible.

Wagner: You do me honor, my friend; but you carry it too far. But you have possibly done better to take your own line. Perhaps you thought (as Milton says) "Better to reign in hell than serve in heaven."

Brahms: No, no; but I could only follow where my genius (if you will allow me any) led me—as you yourself did.

What a fine "philosophy of life" in those few sentences. Two great master geniuses—and each so because he found his work and stuck to it.

So it may be with any one of us. Why worry because one has not the talent of another. Too many working on the same line would soon create monotony. Each has some talent, some ability to do some certain thing well. The first obligation is to discover that thing. Then let nothing deter one from doing that just a little better than anyone else, and reward is sure to come.

Forgotten Pages in the Lives of Masters

Selections from the Unusually Interesting Correspondence and Recollections of

IGNAZ MOSCHELES

Giving Pen Pictures of the Great Masters of His Day, Including Beethoven, Mendelssohn, Clementi, Field and Liszt

IGNAZ MOSCHELES may be complacently called the classical bridge between Beethoven and the Moderns—the Moderns, alas who are no longer Moderns. He was born on the thirtieth of May, 1794, and therefore was still a young man when Beethoven died, in 1827. On the other hand, Moscheles lived to be able to hear "Faust" and "Die Meistersinger." Living in these eventful years, Moscheles literally knew everybody in music. Much of his time was spent at the Leipsig Conservatory. As the teacher of Mendelssohn, and as a kind of quasi-pupil of Beethoven, under whose direction he prepared the piano score of "Fidelio," he enjoyed immense vogue as a pedagogue. His interest in his pupils was sincere and often protracted far beyond the time when they left his tutelage.

Moscheles, who resolved to be a musician in his infancy, received his earliest lessons from Zadrakha, but the child's father was not satisfied with the opinion of a lesser master upon the boy's talent. Accordingly he took him to Horzelsky, who was incapable of restraining the child from mutilating the masterpieces by rushing from one new work to another without finishing them. To correct this the child was taken to Dionys Weber, for whom the little student played in garbled fashion the Beethoven *Sonata Pathétique*. Imagine what a child of seven, with sparse training, could do in the way of riding that war horse. Weber took down the child's conceit with "He makes hash of great works which he does not understand, and to which he is utterly unequal. The first year he must play nothing but Mozart, the second Clementi, and the third, Bach."

At fifteen Moscheles went to Vienna, where he became the pupil of Streicher, Albrechtsberger and Salieri, doing much to refine his style of playing.

Moscheles was devoted to Beethoven and records an amusing interview with the great master.

An Interview with Beethoven

"When I came early in the morning to Beethoven, he was still lying in bed; he happened to be in remarkably good spirits, jumped up immediately, and placed himself, just as he was, at the window looking out on the Schottenbastei, with the view of examining the 'Fidelio' numbers which I had arranged. Naturally, a crowd of street boys collected under the window, when he roared out, 'Now what do these confounded boys want?' I laughed, and pointed to his own figure. 'Yes, yes; you are quite right,' he said, and hastily put on a dressing-gown.

Moscheles gradually developed his talent to a point where his services as a public performer were in demand. He appeared in Leipsig and other towns with success, and then went to Paris, where the whirl of musical events gave him great delight. His diary is replete with descriptions of his contemporaries, one of the most unusual being that of John Baptist Cramer, whose études have been played by thousands of students. Thus he paints this German-born pianist, who later made his home in London, where he made a huge success in the music publishing business. Moscheles paints Cramer thus:

Cramer's Vice

"His interpretation of Mozart, and his own Mozart-like compositions, are like breathings 'from the sweet south,' but nevertheless he shows no hostility to me and my bravura style; on the contrary, in public and private he pays me the sincerest homage, which I requite with heartfelt admiration. Cramer is exceedingly intellectual and entertaining; he has a sharp, satirical vein, and spares neither his own nor his neighbor's foibles. He prefers to converse in French, and shows by his manners that he has spent much of his early life in France.

"He is one of the most inveterate snuff-takers. Good housekeepers maintain that after every visit of the great master the floor must be cleansed of the snuff he has spilt, while I, as a pianoforte player, cannot forgive him for disfiguring his aristocratic, long, thin fingers, with their beautifully-shaped nails, by the use of it, and often clogging the action of the keys. Those thin, well-shaped fingers are best suited for legato playing; they glide along imperceptibly from one key to the other, and whenever possible, avoid octave as well as staccato passages. Cramer sings on the piano in such a manner that he almost transforms a Mozart andante into a vocal piece, but I must resent the liberty he takes in introducing his own and frequently trivial embellishments."

Moscheles possessed one trait that deserves to be emulated by other composers. About this time he commenced to compose extensively and his manuscripts were models of exactness.

"Every one intimately acquainted with Moscheles knew the accuracy with which he managed the engraving of his own productions. His engravers received the most precise instructions, even as to the turning over of the pages; the head of every single note had to be exactly in its right place, every rest made perfectly clear and intelligible to the reader. 'All this,' he was accustomed to say, 'adds to precision in playing, and consequently also to the right understanding of the piece; if any one affects the great genius by writing so indistinctly that no engraver can read it, and if his music is published full of mistakes, that fact does not make him a Beethoven; *he* may do anything, and then he has his special engraver, who understands how to read him. Let them all, however, first compose like Beethoven, and then they may write as they please.'"

IGNAZ MOSCHELES

Teaching Mendelssohn

In 1821 Moscheles settled in London, making frequent trips to the continent. Just one hundred years ago Moscheles went to the Mendelssohn family as a kind of quasi-tutor for the astonishing Felix. Perhaps no better description of the talent of the boy Mendelssohn exists than that given by Moscheles in his diary.

"This is a family the like of which I have never known. Felix, a boy of fifteen, is a phenomenon. What are all prodigies as compared with him? Gifted children, but nothing else. This Felix Mendelssohn is already a mature artist, and yet but fifteen years old! We at once settled down together for several hours, for I was obliged to play a great deal, when really I wanted to hear him and see his compositions, for Felix had to show me a Concerto in C minor, a double Concerto, and several motets; and all so full of genius, and at the same time so correct and thorough! His elder sister Fanny, also extraordinarily gifted, played by heart, and with admirable precision, Fugues and Passacailles by Bach. I think one may well call her a thorough 'Mus. Doc.' (guter Musiker). Both parents give one the impression of being people of the highest refinement. They are far from overrating their children's talents; in fact, they are anxious about Felix's future, and to know whether his gift will prove sufficient to lead to a noble and truly great career. Will he not, like so many other brilliant children, suddenly collapse? I asserted my conscientious conviction that Felix would ultimately become a great master, that I had not the slightest doubt of his genius; but again and again I had to insist on my opinion before they believed me. These two are not specimens of the genus prodigy-parents (Wunderkinds-Eltern), such as I must frequently endure."

Moscheles' account of the death of von Weber is as tragic as graphic. Von Weber, already in the last stages of tuberculosis, went to London with a hope of earning money to add to his estate in the last few hours of his life. He knew that he was doomed, but he worked indefatigably and met with flattering receptions from the British public. While at London he was the guest of Sir George Smart, who did everything possible for the composer's comfort. On July 6th, the following brief entry appears in Moscheles' Diary:

The Death of Von Weber

"Early this morning I was summoned in all haste to Sir G. Smart's. At eleven o'clock last night Fürstenau had conducted Weber to his bedroom; his friends went to his door at an early hour, but found it locked inside, contrary to Weber's promise. To do this he must have got up during the night. It was in vain to knock or call for admission; no answer came. So Sir George sent to me and other friends, and the door was broken open in our presence. The noise did not disturb the sleeper; it was his sleep of death. His head, resting on his left arm, was lying quietly on the pillow. . . . Any attempt to describe the depth of my sorrow would be profanation. I thought Weber a composer quite individual; one who had the imperishable glory of leading back to our German music a public vacillating between Mozart, Beethoven and Rossini. On his dressing-table lay a small washing-bill written by him. This I put in my pocketbook, where I carried it ever after. I helped Sir G. Smart and Fürstenau to seal up Weber's papers, and Sir George, feeling his great responsibility, sent for my own private seal."

The intimacy of Moscheles and Mendelssohn increased apace. When Moscheles' son was born in London the father invited Mendelssohn to become the child's godfather. To this request Mendelssohn replied with a very genial letter and an illustration of the kind of instruments which he thought might be appropriate for the christening. Mendelssohn's letter reads:

"DEAR MOSCHELES,—Here they are, wind instruments and fiddles, for the son and heir must not be kept waiting till I come; he must have a cradle-song, with drums and trumpets and Janissary music; the fiddles alone are not near joyous enough. May every happiness and joy and blessing attend the little stranger; may he be prosperous; may he do well whatever he does; and may it fare well with him in this world! So he is to be called Felix, is he? How nice and kind of you to let him become my grandchild in formâ, and the first present his godfather makes him is the above entire orchestra; it is to accompany him all through life: the trumpets when he wants to become famous, the flutes when he falls in love; the cymbals* when he gets a beard; the pianoforte explains itself, and should people ever play him false, as they will do to the best of us, there stand the kettledrums, and the big drums in the background. Dear me! forgive this rubbish, but I am ever so happy when I think of your happiness, and of the time when I shall have my full share of it. By the end of April at the latest I intend to be in London, and then we will give the boy a regular name and introduction to the big world. It will be grand!"

Moscheles' Striking Portrait of Chopin

Few of Chopin's contemporaries limned him with such deftness as did Moscheles. His description of his meeting with Chopin in 1838 is most characteristic.

"We are living here in the fullest enjoyment of our freedom and independence, and at Leo's, where I love to make music, I first met his friend Chopin, who had just returned from the country. His appearance is completely identified with his music—they are both delicate and sentimental (Schwärmerisch). He played to me in compliance with my request, and I now for the first time understand his music, and all the raptures of the lady world become intelligible. The *ad libitum* playing, which in the hands of other interpreters of his music degenerates into a constant uncertainty of rhythm, is with him an element of exquisite originality; the hard inartistic modulations, so like those of a *dilettante*—which I never can manage when playing Chopin's music—cease to shock me, for he glides over them almost imperceptibly with his elfish fingers. His soft playing being a mere breath, he requires no powerful forte to produce the desired contrasts; the consequence is that one never misses the orchestral effects that the German school demands of a pianoforte-player, but is carried away as by some singer who troubles himself very little about the accompaniment, and follows his own impulses. Enough; he is perfectly unique in the world of pianoforte-players. He professes a great attachment for my music, and at all events knows it perfectly. He played me some of his Studies, and his latest work, 'Preludes.'"

---

*The German word "Becken" has the double meaning of cymbals and basin.

Moscheles' Altruism

Moscheles has less to say of the playing of Liszt and of Rubinstein—the latter then little more than a boy. In 1846 Moscheles went to Leipsig at the invitation of Mendelssohn to head the pianoforte department in the newly founded conservatory. Thereafter most of his time was devoted to composition and to instruction. When Moscheles went to Leipsig his idealism was shown by the fact that he left a very lucrative teaching clientele in London, for a salary of about $600.00 a year.

Mendelssohn's death in 1847 was a great shock to Moscheles. Although the great piano teacher survived the composer genius twenty-three years, he was always devoted to his memory and to his ideals.

Moscheles' life is an example of lofty character and devout appreciation of the highest in his art. Comparatively little of his music survives today. There are over one hundred and thirty compositions credited to him.

"Patience, Prithee!"

By Lynne Roche

Sir Walter Scott is known to have spent days in working up the description of a single bit of landscape. And because of his careful artcraft his books have charmed millions of readers. What seems so very natural and graceful in his style is the result of endless effort and vigilance.

Student, are you so careful with your work? How many times have you said, "Oh, well; I'll get that the next time I come to it?" The *next* time is not *the* time. That is *right now.* That scale over which you stumbled is testing your worth. Are you aiming to be "just some sort of player;" or are you going to be a Sir Walter Scott in music? If you are to rise above the lower atmosphere you will stop right now and master that uncomfortable place, whether it be in a scale, a piece of awkward fingering, a tone which does not sing properly, a phrase without correct inflection, or any other of those seemingly *small* things which are so essential to the *great* interpretation.

Squares for the Harmony Class

By Rena I. Carver

On music paper place each note in every major and minor key (including four or five leger lines above and below both staves) in this manner: clef, signature, note, bar-line; clef, signature, note, bar-line. Then cut at each bar-line, making small squares.

Next write the intervals in each major and minor key in the above manner and cut at each bar-line.

Now all the major, minor, augmented, diminished, and imperfect triads in all postions in all keys should be placed in a similar way: clef, signature, 1st Pos. of triad, bar-line, etc., and then cut into squares.

All the four-toned chords in all positions and inversions in all keys should be written (including dominant seventh, secondary, and diminished seventh chords), also all five-toned chords, and cut into squares.

All the squares are placed in a large envelope and each pupil takes a square and names the clef, signature, note, or interval, or, if a triad or chord, its kind and position and locates it on the keyboard. If the dominant seventh chord, the pupil gives the resolutions.

Musical Enthusiasm

By Katharine Bemis Wilson

Enthusiasm is a factor just as potent in musical endeavor as in the business world. A musician cannot succeed without enthusiasm. If he has none, he soon develops into a dull mediocre performer, uninteresting to others as well as to himself. After a time he wonders why success passes him by; for he started with talent equal to that of his co-workers who have achieved a niche for themselves in the hall of fame.

Without enthusiasm, the pupil, the teacher or the concert artist has no personality. That which is frequently termed personality is largely enthusiasm; belief in oneself and passing that belief on to others through great interest in one's work, properly coördinated and directed.

Enthusiasm at Lessons

If you are a student of music, play or sing as though you really enjoyed it. Enthuse the people who are listening to you. Even try to enthuse your teacher. All good teachers give much enthusiasm to their pupils and a return compliment would be appreciated.

At the same time, remember that a poorly prepared lesson never enthuses any teacher, even when accompanied by a pleasant air of buoyancy. The pose is a false one and not a credit to your teacher's intelligence.

How many times have you begun a lesson utterly discouraged, only to discover after spending a half hour with your instructor that you are filled with a desire to achieve big things in the musical world? That was enthusiasm imparted to you by the teacher. You can note the effect it had on you. Now try it on your audience.

Pianist, Violinist or Organist

When you play in public, do you come out on the platform thinking of the condition of your nerves? Why not try to get enthusiastic about giving pleasure to the people in the audience who have come to be entertained? Some of them are doubtless very tired, having spent a hectic day among their own affairs. Why not try to give them a good time? Put enthusiasm behind your finger and your bow. Don't come out to greet them with the thought in your mind, "How I wish this were over!" Enthusiasm shows in the very way you walk across the stage.

Get enthusiastic about your performance and the surprising fact will come to you that you are enjoying yourself.

The Singer

Have you ever sat in an audience and tried to be entertained by a singer who lacked enthusiasm? There was a chilling expression on her face and her singing impressed you unpleasantly. Even though her voice was of good quality, she lacked the enthusisam to "put it over" to her audience. A few evenings previous, you heard a singer whose voice was not as good, but you liked her performance much better. Why was it? Was it not because she was a piece of sparkling humanity, full of enthusiasm for her work? She wanted you to enjoy your evening with her, and she enthusiastically gave you all of her musical self. Perhaps you even gave credit for more talent than she actually possessed. You heard people talking after the concert and they laid great stress upon her personality. Just what was it? Was it not real enthusiasm that carried her through?

Why Study Music?

The day of the makeshift parlor musician is past. Students in these days study music seriously, not merely to enjoy it themselves, but to give pleasure to others. Is your music valuable to you if you cannot perform in public; if you cannot play or sing for your friends? Why do you study? More and more people like to hear good music. The world is growing better in this way. Is your music a selfish amusement, or are you using it to inspire others?

Let enthusiasm get behind all your musical work and be a credit to yourself and to your instructors. Do not be one of the crowd of "I'm so out of practice," or "I can't play without my notes." This only labels you as stupid or uninteresting. You are not even a parlor ornament in these days of real accomplishment.

So let your enthusiasm grow and grow until it knows no bounds. Enthuse in your practice, in your lessons and in your public performance.

Practice with Enthusiasm

Enthusiastic practice sharpens the brains. Much more can be accomplished in one hour of enthusiastic practice than in three languid ones. If you cannot arouse enthusiasm, possibly your digestion is wrong, possibly you have been up too late at night, possibly you have not taken the proper exercise, or possibly you are ill. Find out what is wrong and remove the clog in the wheel. The late Charles Frohman, famous theatrical manager, was once asked what he considered the most essential quality for an actor. His answer was, "Vitality." Vitality is the result of good health, and good spirits, and good thoughts, plus ENTHUSIASM.

No carpenter ever built a ship by dreaming on the seashore. He labored with hands and brain; and when the flag was unfurled on the mast, he was repaid for his hours of toil. He possessed a mental picture of the completed ship; but enthusiastic work was necessary for the fulfillment of his plan. Attainment comes only to the diligent.

So you cannot have enthusiasm unless you believe in yourself; you cannot believe in yourself unless you know your business; and you cannot know your business unless you work. And only continuous enthusiastic practice brings perfection.

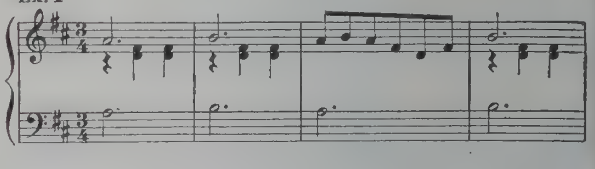
Melody Touch

By R. A. Davidson

An inquiry as to special touch in melody playing, was a subscriber's question in one of last year's Etudes I have just been re-reading. This is a good thing to do, by the way, as the last few years' numbers of the Etude are practically a working encyclopedia for the musician, teacher or student.

My own experience every year with an increasing number of students from other teachers is that comparatively few have given any attention to making the melody stand out prominently above accompaniment chords in such measures as the following:

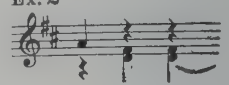
Ex. 1



This is the opening measure of the waltz "Sleeping Princess," by Montague Ewing, a piece that is an instant favorite with every pupil to whom I have given it. It is always recognized as one they have heard played in places of amusement; and, therefore, one they know is popular. I use it for the express purpose of cultivating the melody touch.

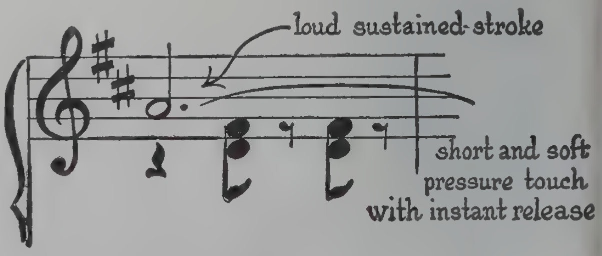
This measure is commonly played (and sounds) this way, in the right hand:

Ex. 2



The effect on the listener is one short melody note, at once let go by the finger, and two short chords, with the last chord always held down or prolonged. The listener hears just the opposite effect from that intended or wanted.

I would suggest that every teacher or student sit at the piano and cultivate an acceptable melody touch by playing the right hand as follows:



In addition, a very effective way to contrast the two hands in bringing out prominently the same melody is to use a "bouncing" touch with the left hand. This gives the accent, helps to maintain the correct rhythm, and is a contrast to the sustained melody touch in the right hand.

If this is done and cultivated in all similar passages, there will be a very noticeable improvement in playing. In the great rush after finger dexterity, this simple way of accomplishing melody playing has been somewhat neglected.

The Teachers' Round Table

Conducted by PROF. CLARENCE G. HAMILTON, M.A.

This department is designed to help the teacher upon questions pertaining to "How to Teach," "What to Teach," etc., and not technical problems pertaining to Musical Theory, History, etc., all of which properly belong to the Musical Questions Answered department. Full name and address must accompany all inquiries

Length of Lessons

I have been giving hour lessons to all my pupils and find that the children often grow restive before the time is up. Would you advise me to shorten the period? What could I cut out in order to do so?
G. H. C.

I should certainly advise shortening your lessons to three-quarters of an hour or even half-hour periods; for the strain of keeping a child's mind fixed upon piano drill for an hour is pretty sure to wear the nerves of both teacher and pupil to a frazzle.

With children, two half-hour lessons per week is ideal; and with very young children the time may even be shortened to twenty minutes, in which case three periods per week are desirable.

Now as to how this shortening process may be effected without cutting out anything essential. Here are some possibilities:

1. Be sure that proper preparation is made for the lesson. Have a definite plan in mind as to what topics you are to take up, in what order they are to be presented, and the time to be devoted to each. Have the music which you are to use ready to hand, and any other material such as pencils and blank books, so handy that the lesson may proceed without a hitch.
2. Begin and end the lesson promptly. Much time is often squandered in simply "getting fixed." Insist on the pupil's appearing promptly at the appointed moment; and have it understood that lateness will correspondingly shorten the lesson.
3. Take care that the lesson is not interrupted. Often its continuity is broken to bits by telephone calls, peddlers, family problems and similar disturbing elements. The lesson time belongs exclusively to the pupil; and nothing but an earthquake or a cyclone should be allowed to interfere with it.
4. Finally, and most important of all, *concentrate.* Eliminate superfluous conversation, and make every moment count toward the subject in hand. Save time, too, by putting your fingers directly on the salient points. Pick out weak passages and show what is to be done with them. Let the pupil simply play such doubtful passages in a piece, and not often perform the entire composition. Go over the new lesson, too, and so prevent the mistakes that may otherwise creep in and take time in their correction at the next lesson.

All of these items may be summed up in the words: make the whole lesson bright, snappy and to the point. Thus the pupil's mind will be kept alert; and thus instead of a dreary hour of pulling and hauling, a half-hour will be spent in the accomplishment of something definite; something that will prove a real incentive to the pupil's enthusiasm for piano playing.

The Cramer Studies

In what order should Cramer's Studies be taken up?
W. R. M.

Of J. B. Cramer's wide teaching experience the most important fruits are his "84 Studies, in two parts of 42 each," which orginally constituted the fifth part of his *Grosse praktische Pianoforte-Schule* (Great practical Pianoforte School). To complete the even hundred, he afterwards added sixteen others, which are, however, inferior in merit to the original ones.

Von Bülow, the eminent pedagogue, reduced these to the *Fifty Selected Studies* (Presser Collection, No. 175), which are widely known and studied, and to which you doubtless refer. While this selection is in the main a good one and well graded, it nevertheless contains a number of studies that are scarcely worth while for the modern piano student. I suggest, therefore, the following list from the *Selected Studies,* as containing those which are most useful. The order given is perhaps as good as any, though it may readily be altered to meet special needs:

Nos. 1, 2, 3, 4, 5, 6, 7, 8, 10, 13, 14, 15, 16, 17, 19, 20, 21, 24, 27, 28, 29, 30, 31, 33, 41.

"You must not play so fast. There are too many beauties in this piece to be brought out; you cannot do so if you treat the piano like a sewing machine."

—HANS VON BÜLOW.

Testing a New Pupil

I often find it difficult to know just where to place a new pupil who has had some previous piano study. Please advise me how to test his musical knowledge and ability.
C. G.

There is no more valuable aid in the details of piano teaching than the card system. Provide a number of these cards (5 by 3 inches) with certain items printed or typewritten on them; and fill out one of these cards for each new pupil, whether a beginner or not. On the front side of the card such details as the name, address and amount of previous study may be noted; while on the back you may write the result of your tests of the pupil's work. Eventually all such cards will be arranged in alphabetical order for immediate reference.

Here is a sample card, with its collected data:

(Front)

Name, *Willis, Peter* Age, *12*

Address, *21 Cross St.*

Began, *September, 1924*

Previous Study, *2 years with Miss Black*

Music Studied, *Mathew's Graded Course, first two books; a few short pieces*

Grade, *3*

(Back)

Technic, *Wrists stiff—needs relaxing exercises and finger work*
Interpretation, *Good sense of rhythm, but poor phrasing*
Sight reading, *Fair*
Ear Training, *Has had very little*
Memorizing, *Plays two pieces from memory*
Remarks, *Is apparently interested in music and seems to have natural musical ability; but is inclined to be careless in details*

The data for the front of the card may be gleaned by talking over matters with Peter or his mamma. For the back of the card, have him play a few finger exercises, scales, and so on, and a study or piece. For ear training, play some simple melodic progressions and require him to name the notes as they are sounded, or, if he is able, let him write them down.

Of course, your judgment of his work will probably be revised after you have given him a few lessons; but the data you have collected will at least furnish a working basis.

Finally, let me caution you to assign at first material that is well within his ability, so that you may not overshoot the mark and have to "back down" subsequently. Begin with a short piece or study rather than a large volume of exercises, so that if your estimate of his ability is in error, you may easily rectify the mistake by changing to easier or harder music.

Resuming Technical Practice

I have a pupil who has been through Mathew's *Ten Grades,* Cramer's *Fifty Selected Studies,* Bach's *Well-Tempered Clavichord,* Vol. 1, and other studies of this type. She is now out of practice and needs technical exercises of some kind. She holds her wrists high with straight fingers, with the ends turned up the most of the time. Her knuckles are so limber she cannot seem to keep them rounded. Please tell me what I can do to keep them in the correct position. Please also name a few pieces of about the ninth grade that would be suitable for such a pupil, and that a pupil will call "pretty."
Mrs. G. A. C.

Holding the wrists high may be called a "good fault," if properly regulated. But the fingers should certainly be curved and not allowed to bend outward, as you suggest. Perhaps some exercises away from the piano may help matters. Let her hold a croquet-ball in her hand, grasped firmly by the fingers; and then, keeping this position, and placing the finger tips on top of a table, let her perform a few ordinary five-finger exercises, taking care meanwhile that the wrists are kept loose. A little practice of this kind each day ought to emphasize the correct position. Perhaps she sits too high at the piano. Her wrists may certainly be brought down by lowering the stool far enough.

For further technical work I advise you to assign at each lesson a group of scales or arpeggios to be worked up to a certain metronome speed. These should be practiced at first slowly and eventually as fast as they can be performed with safety. As to studies, have you tried her with Moscheles' Op. 70, Book 1? After these, modern studies may be introduced, such as MacDowell's 12 *Studies for Development of Technic and Style,* Op. 39; and so on to the invaluable Etudes of Chopin, Op. 10 and Op. 25. The virtuoso studies of Liszt, Rubinstein, Scriabin and others, come last on the list.

For pieces, try the following, all of which are essentially pleasing:

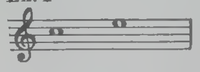
Moszkowsky: *Momento Giojoso,* Op. 42, No. 3.
Chaminade: Etude, *En Automne,* Op. 35, No. 2.
John Ireland: *The Island Spell.*
Debussy: *Prelude in F,* from *Suite Bergamasque.*

Looking at the Hands

Will you please suggest how to deal with the very young beginner who persists in looking at his hands, instead of the music, when he plays?
E. S. P.

There are two methods of translating a note on the printed page into tone: the *absolute* and the *relative.* We may think of a note as representing a definite key on the piano, and then find that key and sound it; or we may think of the new note as located at a certain distance from the one which preceded it. In playing consecutively the two notes:

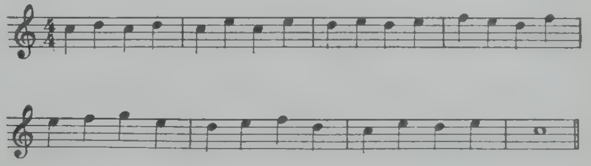
Ex. 1



for instance, we naturally find the first by the *absolute* method, let us say, with the thumb. But, having now a starting point, we may locate the second note simply by remembering its distance from the first, namely, the third white key above the latter; hence by the *relative* method. Let us assume that the child has arrived at the point where he can find individual notes on the keyboard. He looks down and finds the C; then looks again and finds the E; but the two are, to his mind, separate and unrelated titles. He must, accordingly, be next taught to read *intervals,* and to translate these intervals into muscular activity. It is the same process as in learning a language. The child first learns individual words—*cow, eat, pasture, grass*—and then to relate these terms by connecting words, so that the sentence is built: "The cow is in the pasture, eating grass."

Having acquired the ability to find individual notes, the matter of reading intervals is largely one of practice; but it may be helped along materially by the teacher. You say to Johnny, "Let's play the game of finding notes without looking at the keys." On a piece of manuscript paper placed on the music rack before him, you then write treble C, which Johnny proceeds to find on the piano, and holds with his thumb. Now he is to play, without looking again at the keys, the following succession of notes as you write them, one after the other:

Ex. 2



If necessary, you may hold a piece of paper over his fingers while he does this.

After this process, let him read the entire succession of notes, one by one, as you point to them.

A little practice of this sort at each lesson will help to train his muscular sense. As he becomes more proficient, more complex progressions may be employed. Meanwhile he may be encouraged to read his regular lessons in the same way. Perhaps you might offer a prize for reading a whole line without looking at the keys!

The Musical Scrap Book

Anything and Everything, as Long as it is Instructive and Interesting

Conducted by A. S. GARBETT

OPERA IN BERLIN TO-DAY

Writing in *Harper's Bazar,* Rufus Colfax Phillips published an article on "Night Life in Berlin," which shows that the Germans have gotten over war-prejudices in a fine way, but have not lost their racial enthusiasm for their own Teutonic people. There is a lesson in this for Americans inclined to belittle the efforts of their own country in music.

"The Germans are a serious-minded and scrupulously artistic people. They concentrate a deal of their fine energy upon the opera, and there one may see the real *beau monde* and hear fine music, that great contribution of Germany to the artistic entity of the earth.

"They have no objection to Italian or French opera; the Germans have no artistic prejudices, none whatsoever. They give 'Aida' with a fine self-conscious proof, but naturally they sing it in German. No opera could be really opera unless sung in German, and, as a logical conclusion, 'Carmen,' 'Le Coq d'Or,' 'Butterfly,' all of them, must have their delicate tinge of Teutonic gutterals applied to them; and, of course, there must be a German naval officer in 'Butterfly.' And 'we true music lovers' made a howl when they tried to sing Wagner in English at the Metropolitan! But the American artistic ideals aren't to be compared with the continental variety, and we must not apply the same rule."

There is much to be said for opera in English, and we ought to have more of it in America. All the same, opera is undoubtedly at its best, aesthetically speaking, when sung in the language of its origin. At the Metropolitan we get the best opera in the world, sung under the best conditions by the world's best singers. It is a truly "metropolitan" home of opera. Nevertheless, opera ought to have a few where good opera could be heard in English.

ARABIC MUSIC

Writing in *The Musical Quarterly* on "Pierre Loti: a Prose Poet of Music," Frederick H. Martens quotes some interesting passages from this French sailor-author who was also a good deal of a musician.

"The Arab music of Africa—as contrasted with its negro music," says Mr. Martens, "is treated in greatest detail in Loti's *Au Maroc,* that poetic account of a journey to Fez in company with a French embassy. Outside of Tangiers, before starting, the author, from the encampment of the Arab escort the Sultan of Morocco has sent forward, hears 'The sad songs in falsetto, the shrill tones of the guitar, coming from the tents of the camel-drivers.' And in the city.

"'Before a little fire with a yellow flame, in the midst of a circle of squatting folk, a negro sorcerer sings softly while he beats a drum. And suddenly a great Arab bagpipe begins to wail, dominating all other noises with its shrill, squeaky voice. . . . Ah, I had forgotten that sound which for many a year had not chilled my ears! It makes me shiver, and I experience a very vivid, very startling impression of Africa; one of those impressions of a day of arrival which one no longer obtains on succeeding days, when the comparative faculty has become blunted by contact with novel things

"'The bagpipe continues with a kind of increasing exaltation its monotonous and harrowing air. I stop the better to hear it; it seems to me that this song is the hymn of the days of old, the hymn of the dead past——I feel a moment of strange pleasure to think that I am thus far only on the threshold, only on the entrance profaned by all the world, of the empire of the Moghreb. . . .'"

HAYDN ARRIVES!

Haydn's first visit to London, December 1790, greatly augmented his continental prestige. His own account of his arrival in a letter to Frau v. Genzinger, part of which we have extracted from J. C. Hadden's biography, is interesting. There is an American touch in the English attempts to overfeed the foreign celebrity!

"My arrival caused a great sensation through the whole city," says Haydn, "and I went the round of all the newspapers for three successive days" (the American touch, again!) "Everyone seems anxious to know me. I have already dined out six times, and could be invited every day if I chose; but I must in the first place consider my health, and in the next my work......I was yesterday invited to a grand amateur concert, but as I arrived rather late, when I gave my ticket they would not let me in, but took me to an ante-room, where I was obliged to remain till the piece which was then being given was over. Then they opened the door and I was conducted, leaning on the arm of the director, up the center of the room to the front of the orchestra amid the universal clapping of hands, stared at by everyone, and greeted by a number of English compliments. I was assured that such honors had not been conferred on anyone for fifty years. After the concert I was taken into a very handsome room adjoining, where tables were laid for all the amateurs, to the number of two hundred. It was proposed that I should take a seat near the top, but as it so happened that I had dined out that very day, and ate more than usual, I declined the honor, excusing myself under the pretext of not being very well; but in spite of this I could not get off drinking the health, in Burgundy, of the harmonious gentlemen present; all responded to it, but at last allowed me to go home."

And. as Ye Editor would say: "A good time was had by all!"

"BALLADS, SONGS AND SNATCHES"

One of the earlier works of the composer of *The Mikado* was a ballet for Covent Garden called *L'Ile Enchantée,* in which Sullivan learned some facts about theatrical composition destined to prove useful. "On one occasion," says Sullivan in his biography (by Arthur Lawrence), "I was admiring the 'borders' that Beverley had painted for a woodland scene. 'Yes,' he replied, 'they are very delicate, and if you could support them by something suggestive in the orchestra, we could get a very pretty effect.' I at once put into the score some delicate arpeggio work for flutes and clarinets, and Beverley was quite happy. The next day probably some such scene as the following would occur. Sloman, stage machinist (*loq.*): 'That iron doesn't run in the slot as easily as I should like, Mr. Sullivan; we must have a little more music to carry her across. Give us something for the 'cellos if you can!' 'Certainly, Mr. Sloman; you have opened up a new path of beauty in orchestration.' I replied, gravely, and I at once added sixteen bars for 'cello alone. No sooner was this done than a *variation* (solo dance) was required at the last moment, for the second *danseuse* who had just arrived. I said to the stage manager, 'I haven't seen her dance yet—I know nothing of her style.' 'I'll see her,' he replied and took the young lady aside. In five minutes he returned. 'I've arranged it all,' he said. 'This is exactly what she wants (quoting it to me rhythmically); '*Tiddle-iddle-um, tiddle-iddle-um, rum-ti-rum-tirum* sixteen bars of that; then *rum-tum, rum-tum,* heavy, you know, sixteen bars, and then finish up with the Overture to *William Tell* last movement.' In ten minutes I had composed it, and written out a *répetiteur's* part, and it was at once rehearsed."

MUSIC AND AESTHETIC DANCING

Music and dancing have ever gone hand in hand. The basis of the symphony form is the dance-suite, and Chopin idealized the Waltz, the Mazurka and the Polonaise as Debussy has idealized the Cake-walk, and countless other composers have idealized the folk-dances of their native lands.

Musicians may therefore find interest in the viewpoint of an aesthetic dancer of international fame regarding music from the point of view of Terpsichore, the muse of dancing. Loie Fuller, the American danseuse, has written a book called "Fifteen Years of a Dancer's Life," to which Anatole France has contributed a preface.

"In general," she says, "music ought to follow the dance. The best musician is he who can permit the dancer to direct the music instead of the music inspiring the dancer."

Many musicians will find this a novel point of view, and somewhat disconcerting. It has long been a tradition that the dancer must keep time to the music. Apparently even the dancers think this, for Miss Fuller tells us, "In point of fact the dancer, on hearing a piece of new music says: 'Oh, I cannot dance to that air.' To dance to new music the dancer has to learn the conventional steps adapted to that music.

"Music, however, ought to indicate a form of harmony or an idea with instinctive passion; and this instinct ought to incite the dancer to follow the harmony without special preparation. This is the true dance."

Here is a point of view worth considering, especially by musicians lacking an imaginative sense of rhythm in their musical interpretations. Let them take a new look at their music from the point of view of a dancer. It may help them to become more plastic and responsive.

"HEAVENLY" MUSIQUE!

"It was so lovely," remarked an ecstatic young lady, describing a symphony she had heard; "it made me positively ill." We all of us know the complaint; but it has remained for Mr. Samuel Pepys to define the "sickness" engendered by beautiful music in a memorable passage from that inexhaustible treasure of quaint sayings, his Diary:

"Went to see the *Virgin and Martyr;* it is mighty pleasant; not that the play is worth much, but it is finely acted by Becky Marshall. But that which did please me beyond anything in the whole world, was the wind musique where the angels come down; which is so sweet it ravished me; and indeed, in a word, did wrap up my soul, so that it made me really sick, just as I have formerly been when in love with my wife, that I could think of nothing else."

Art is a grateful friend; the more you dedicate yourself to it, the truer it is to you.—Leschetzky.

"For the majority of musical callings, after all, a right combination of qualities is far more valuable than any special capacity in one line."—Charles H. Farnworth.

COLLECTING FOLK-SONGS IN THE APPALACHIANS

There could have been no better person to collect the old English folk-songs still to be heard in the Appalachian Mountains in the Southern States of this country than Cecil J. Sharp, who, in conjunction with Mrs. Olive D. Campbell, has recently published his findings in a book, *English Folk-Songs from the Southern Appalachians.* Mr. Sharp is, of course, an authority on English folk-music.

In his admirable preface he tells us that "My sole purpose in visiting this country was to collect the traditional songs and ballads which I had heard from Mrs. Campbell, and knew from other sources were still being sung there. I naturally expected to find conditions very similar to those which I had encountered in England when engaged on the same quest. But of this I was soon to be agreeably disillusioned. Instead, for instance, of having to confine my attention to the aged, as in England, where no one under the age of seventy ordinarily possesses the folk-song tradition, I discovered that I could get what I wanted from pretty nearly everyone I met, young and old. In fact I found myself for the first time in my life in a community in which singing was as common and almost as universal a practice as speaking.

" * * * And it was precisely this ideal state of things that I found existing in the mountain communities. So closely, indeed, is the practice of this particular art interwoven with the ordinary vocations of everyday life that singers, unable to recall a song I had asked for, would often make some such remark as, 'Oh, if only I were driving the cows home I could sing it at once!' On one occasion, too, I remember that a small boy tried to edge himself into my cabin in which a man was singing to me and, when I asked him what he wanted he said, 'I always like to go where there is sweet music.' Of course I left him in, and, later on, when my singer failed to remember a song I had asked for, my little visitor came to the rescue and straightway sang the ballad from beginning to end in the true traditional manner, and in a way which would have shamed many a professional vocalist."

"Music is the universal heritage. Somewhere in the flower-dotted fields between Brahms and *The Maiden's Prayer* there is room for all of us to ramble."

—George Ade.

A very playable idealization of a popular Spanish-American rhythm.
Grade 3½.

No need to deny yourself a Baby Grand any longer

NO MATTER HOW SMALL YOUR HOME, if you have room for an upright you have room for a Brambach Baby Grand.

Nor is this all. The moderate price comes as even more of a surprise—and makes the Brambach more than ever the instrument you'll want to own.

To really know the Brambach, you must hear its beautiful tone, appreciate its wonderful responsiveness, examine its handsome casing. The Brambach Baby Grand is the result of 101 years of fine piano-making.

A de luxe brochure and a paper pattern showing the Brambach's exact size, will be sent free of charge if you will simply fill in and mail the coupon, also the name of the nearest music merchant who sells the Brambach.

BRAMBACH

BABY GRAND

$635 *and up f.o.b., N.Y.*

BRAMBACH PIANO CO.
Mark P. Campbell, Pres.
640 W. 49th Street, N. Y. City

Please send me paper pattern showing size of the Brambach Baby Grand.

The Singer's Etude

Edited by Noted Voice Experts

It is the Ambition of THE ETUDE to Make This Voice Department "A Vocalist's Magazine Complete in Itself"

Vocal Production in the Child, the Adolescent and the Adult

From an Address by the Noted Composer and Teacher, Isidore Luckstone

Read Before the Normal School for Music Supervisors Under the Direction of Dr. Hollis Dann, at West Chester, Pa.

[EDITOR'S NOTE.—*Isidore Luckstone was born in Baltimore, January 29th, 1861. He studied piano, theory and voice with many of the leading masters. After professionally touring the world, he returned to America and became the foremost accompanist. His memory is prodigious; for he has rarely appeared on the platform with notes. In this way he acquired an enormous repertoire of operatic and concert material, always at his fingers' ends, and gradually became the trainer in both voice production and interpretation of many celebrated artists.*]

WE have voices and natural talents in this country that can easily compete with those of any nation on earth; but, as everything tends toward the almighty dollar, study is neglected, and get-rich-quick singing is uppermost in the student mind. The slogan of the day seems to be "get-wise-quick and get-rich-quick." The result is a decadence in vocal standards and purity of tone. Artistic ideals are neglected, and loud singing and questionable effects substituted. There is a lack of desire for knowledge of technic. Operatic arias, and particularly the dramatic ones, inspire the youthful aspirant, and as a consequence many teachers are forced against their better convictions, to cater to the student's mistaken ideas. Each one wants to be a vocal *Babe Ruth,* completely forgetting that the vocal cords are a great deal more delicate than a baseball.

The obvious time to correct this tendency is at a very early age, and the appropriate place is in the schools. Here is *your* opportunity to render an invaluable service to the nation. You can begin to cultivate the child's appreciation, and, through normal gradation, create a desire for purity and artistry instead of the bombastic and the spectacular. The best means at your command to accomplish this purpose is by precept. It is, therefore, my earnest wish to make a strong appeal to you in this direction.

I fully value the splendid work being done here and know that progress is inevitable; but I am *convinced* that technics alone will not suffice. It is an interesting scientific fact that the mind of a child somewhat under two years of age is only equivalent to that of an average animal; But as the child's mind continues to develop thereafter it becomes more and more like a thirsty sponge, ever ready to absorb. His mind in the recipient stage gives music the great opportunity to make its appeal through expression. This must be transmitted by the teacher. It cannot be *told* nor *taught.*

Tonal Examples

Some wise man has said: "You can't *learn* nothin' to nobody." This applies particularly to the vocal question in the child. Give anyone a tone, and more especially to a child, and he will approximate the pitch without reasoning how or where to acquire it. A good tonal example will generally induce a better response than a poor one, especially in children who are natural imitators. A tonal example that is agreeable and free, consequently having its natural vibrations, would unconsciously appeal to the child's hearing and create a genuine interest. This would present the inductive method the subtleties of which always attract the developing mind of the child. Feed the youthful mind with these subtleties rather than the drier mechanics. It is obvious that the teacher himself, in order to accomplish this, should be able to sing a tone with correct vocal production. How otherwise would you expect to inspire the child with the proper appreciation. Any one can learn to give a free tone, even though the voice is not of particularly good quality, and many of you have good voices, while some, I know, are beautiful. To improve the child's voice you should cultivate your own so that you could illustrate correctly. This would benefit the speaking as well as the singing voice. Your work would be enhanced almost beyond conception.

You must educate your own *hearing* if you are to educate the *ear* of a child towards his own organ. I feel that this most valuable part of the work is the most neglected—to teach one to hear *himself.* It is inconceivable how any one can fail to hear himself when the ear is correctly educated. It is merely an evolution toward keen aural appreciation. Physicists state that the ear as a sense is even keener than the eye. I have repeatedly demonstrated to myself and to others that our aural perception of our own tone production is an absolute and essential necessity. Let me quote authoritative statements.

Helmholtz, one of the greatest scientists the world has ever known, states:

> "The vocalist does not, properly speaking, *tune* at all. It is with him a matter of ear, that is, sense of pitch which guides the muscles to alter the tension of his vocal chords and make them produce tones at various pitch. The ease and rapidity with which this can be done are matters of careful training followed by long practice. They can never be acquired by those who have not the proper cerebral organization."

Dr. Gordon Holmes says:

> "The tone of the voice is therefore governed almost wholly by the will of the speaker; and according to the delicacy of his ear will be tuneful or the reverse. That the ear is mainly instrumental in producing refinement of vocal tone is proved by the example of persons who, being born incurably deaf, have been taught to speak, as in such cases the voice remains harsh to the highest degree." He also says: "The ear must be guided by results to act as chief arbiter of the utility of many practices relating to voice training. *In all cases the ultimate appeal must be to the ear.*"

These references may seem superfluous, especially if they appear as obvious to you as they do to me; but this very simple fact is still ignored by many vocal teachers and singers. It is necessary to have the child learn to know through hearing whether he is singing not only with the correct pitch but also with the tone quality desired. He is not encumbered at this period with methods and so can the more easily learn inductively.

Those who cannot hear themselves have never been taught to develop that sense. Through acquirement of this faculty at an early age, the tendency toward correct vocal development will right itself and later on will simplify actual training. It is not advisable at this time to enter into technical fundamentals. It is best to allow children to slowly mature musically and vocally through induction. Naturally if there are not not enough supervisors and the work is done principally by the grade teachers it is much more difficult. But the supervisors should then instruct the grade teachers in the quality of the speaking voice at least and in production of the singing voice when possible.

When Singing Should Cease

If the head voice is used during childhood and the voice is not forced or strained, there is usually no *serious* "break" during adolescence. Therefore in most cases the boy may continue to sing, provided always that all strenuous use of the voice is carefully avoided. A broken and uncertain condition of the speaking voice is conclusive evidence of a similar condition of the singing voice. Whenever such a condition exists, singing should cease altogether until the disturbed vocal conditions disappear.

Growing Youth Forces the Voice

Unfortunately, growing youth is particularly prone to force the voice. That of a child before puberty should never be forced down in order to produce a chest quality. The beautiful head tone should be allowed full freedom in a limited range. Nor should the adolescent be allowed to sing high tenor and low bass parts in dramatic works. I believe this is frequently done, but only in the United States, and is to be deplored. Many voices of great promise have been destroyed through bad usage at this the most sensitive physiological period of their existence. It is an excellent time to devote to the study of musical literature. A graded musical education of the classics, and particularly of the vocal literature can now be made valuable. The voice of the boy at this period goes down an entire octave, while the girl's voice changes only about a tone or two. It is imperative that such transitions receive due consideration. Delay the study of technic until adolescence has been established. General breathing exercises as well as any athletic training intended for physical development are beneficial; but training of vocal foundations should be postponed.

We now come to the adult voice. To sing correctly and artistically many qualifications are needed. People often have peculiar ideas, however, as to proper qualifications. I recall an instance when a lady brought her daughter to me, saying, "I believe that my daughter is destined to be a great singer. I am sure that you will find that she possesses a really wonderful voice, for I have noticed that all the renowned singers have very long necks. Kindly notice my daughter's neck." And I answered: "My dear Madam, I fear that you may be mistaken. The one animal in the world that has no vocal chords, consequently incapable of making any sound, is the giraffe." Such ideas are, of course, absurd. Voice, musicianship, intelligence and imagination are the principal qualifications.

In dealing with the adult voice we must understand the physiological elements that enter into singing. It is essential to know the process of tone production, and I shall endeavor to give you a very brief outline. You must realize that this knowledge must not be used in an effort to *manufacture* tones, but that it should be kept in mind merely for the purpose of allowing nature to assert itself. The first thing we do is to take a breath, that is to say, inhale. There are many ways of breathing; and there seems to be much difference of opinion as to the best method. Notwithstanding the great diversity of description among teachers and vocalists as to the various methods, it is necessary to recognize that there is but one form of breathing that prevails physiologically in all individuals; and that is normal "abdominal" diaphragmatic breathing. This breathing consists of both the thoratic and diaphragmatic acting in perfect synchronism, but merely under greater control and amplitude in the singer.

The so-called "abdominal" breathing means the expansion of the abdominal muscles; since there is no breathing apparatus in the abdomen.

Clavicular breathing is absolutely wrong, because the lifting of the shoulders entails muscular tension in the neck and throat, which would of course interfere with singing. We should, therefore, only use a combination of costal and diaphragmatic breathing, which is known as thoracic breathing. This is what we do when we ordinarily take a breath to speak; and it should be exactly the same when we sing. The only difference is that we take longer breaths. It may interest you to know that normally we take in only three-fifths of a pint of air, whilst there are actually about four quarts of air almost constantly in the lungs. Instead of breathing about seventeen or eighteen times a minute, which we do normally, we reduce this number by taking in a larger supply of air when we inhale to sing; but it is well to remember that one can suffer from too much air as well as from too little. When we exhale the breath the air finds exit through the windpipe or trachea; and in producing a tone this exhalation sets the approximated vocal chords into vibration. Although the pitch desired fixes the chords automatically, the air alone makes them vibrate. Only a limited amount of air can pass between the chords, and no matter how loud a tone is desired only a quarter of one per cent. of additional air can be forced through. The breathing muscles, through training, help to sustain the air in expulsion. Artificial muscular rigidity must not be used for this purpose.

How Tone Acquires Quality

The tone acquires quality through the resonators, which principally include the pharynx, mouth, and nasal cavities. An essential for tone quality is nasal resonance, and, while I firmly believe in nasal resonance, I do not advocate a nasal tone. As the tone is emitted from the larynx it is projected by means of the relaxed uvula to the resonating chambers that surround the nasal cavities, therefore producing nasal resonance. The most important factor in tone production is the complete relaxation of the throat and its surroundings. Contraction should be avoided in the soft palate as well as in the throat, or the head resonance will not be forthcoming. The soft palate, tongue, and lips are for purposes of enunciation only. Let the tone dominate the activity of the chords instead of the contrary. Frequently a student will state that he was instructed to focus the tone in the throat. This I consider fatal. By obtaining head resonance in the *primary attack,* one can learn to use what the French term the "masque," for through the resonating chambers of the face the tone carries farther than through any other means. This cannot be forced; and when I speak of attack I do not mean *assault.* In every case the voice should be treated with consideration. I teach my pupils to think the peak of the pitch and work downwards from that. When working from top down, the youthful quality may always be retained and registers obviated. This will not interfere with a more sonorous tone when descending; for a natural adjustment in the chest cavities permits of a deeper resonance even to the woman's chest tones, and the blending upper quality creates an even scale throughout the entire range. Thus the deadly lower edge of the tone is mastered as well as any flat singing or tremole.

Head resonance first should be your slogan, not muscular effort. The body, throat, jaw, and neck muscles should be relaxed. Experience has taught me that almost every student contracts the muscles of the neck, creating rigidity that interferes with the normal action of the throat. This is partly because the breathing apparatus is not properly under control, and it would seem to them to be the only alternative. Muscular action as such does not produce tone. Likewise interference of the tongue is a mistake and is also a frequent cause of bad tone production. While many teachers and singers believe in flattening the tongue and some work to have it furrowed, I am convinced that any voluntary fixation is injurious. Whenever you deliberately depress, raise, scoop, or draw it back, you interfere. It will more likely act correctly if allowed to function as in speech.

Visualize Your Tone

These generalizations embody the essential fundamentals in singing. It is necessary for the student to grasp and apply them in vocal production. Once fully acquired they become habitual, and in final rendition should be automatic. One can then induce freedom and purity of tone through musical thought. In fact, it is ultimately through the psychology of the art alone that successful singing may be allowed. Vocal production, therefore, is control of breathing and emission of tone, the correctness of which must be proved by one's own hearing. Visualize your tone; have a preconceived ideal; and you will be able to induce rather than produce it. Hear it in *advance*, and then let your hearing determine the result. Rely upon your hearing rather than sensation. It is the *coordination* of the myriads of muscles, nerves, tendons, and so on, that gives you the means of singing; and any deliberate effort applied to any particular group or locality will not be productive but merely obstructive.

I would like to elaborate upon the question of presentation, but I am obliged to content myself with saying that its efficiency depends upon the text, its meaning, and the musical concept. In the desire for tone, text is neglected, for it is unfortunate but true that one can rarely hear clear enunciation. In the majority of cases one might just as well be listening to a Mendelssohn's song without words. Presentation also demands the style and color of the composition according to nationality. It would be a mistake to attempt a Russian song in the style of an American ballad. Music conveys different meanings to different peoples according to their conventions. An extreme instance of this is noticeable in Japan where they use quick music for **burials and slow music for weddings, just as** they use a wet towel to dry themselves after a bath whereas we would use a dry towel.

I remember the funeral procession of a wealthy Chinaman in Singapore. A brass band comprising Malayan natives, escorted the body and played what was considered appropriate music to solemnize the journey of the departed. They had evidently run out of native melodies and had borrowed in some way or another, from their American friends. Two selections particularly interested me. The first was, "I'm Afraid To Go Home In The Dark." And the second was, "There'll Be A Hot Time In The Old Town To-night." I do not expect that many singers or supervisors will ever be called upon to vary their style of presentation to such an extent and on such unusual occasions, but nevertheless, I must take this occasion, though I have never done so publicly before, to pay tribute to that old Malayan band—it certainly had a unique style!

When allowed to put aside mechanical production, by giving the poem its fullest expression, with the necessary dramatic application, one obtains the color of tone desired. This requires imagination. In speaking, the color of the voice always corresponds with the particular kind of expression given—the different kinds of love, sadness, happiness, and so forth. It can be applied equally in singing, once the correct technic has been acquired. Feel the story and the vocal necessities will follow. I do not refer to coloratura singing, of course, where text is very secondary—it is the one exception. One does not generally appreciate the fact that even beautiful tone can become very monotonous. The interest lies in word meaning and sympathetic appeal. Through your own imagination, appeal to that of your audience.

In conclusion, I would emphasize that Music is a significant factor in the uplift of all nations. It is a cultural medium towards the highest ideals of refinement, good taste and aestheticism. The history of the evolution of music parallels the history of civilization. He is indeed, fortunate who is able to offer his best efforts to such an art; and you are individually, and as an organization, to be congratulated upon your remarkable work in the past, and for the breadth of vision and ever expanding ideals with which, I am sure, you will look into the future.

Child Music

In a recent issue of *Musical Opinion*, Ernest Austin, the eminent English critic, writes interestingly, instructively and with evident knowledge of the type of music adapted to children.

"The child at play is perpetually inventing, turning the world (and the nursery) upside down, like a poet; revealing hidden romance, like a composer of music. The poet 'dreams,' the composer 'listens,' and the child 'plays'—at all their occupations. The use of the imagination is common to them all. They 'sort out' and criticise and 'invent.'

"If we admit the 'kinship' of child, poet and composer, one of the first thoughts that will cross our mind is whether children have been fairly treated by composers. (The question does not arise with regard to poets, because the poets *have* treated the children fairly!)

"I contend that composers of music have not—as a whole—been even 'amiable' to children. They generally have taken the view that music for children must be simple. They have put that first and last, and in their anxiety to do the right thing, have forgotten the poetry, the romance, the story, the magic. They have almost taken the view that anything will do for a child, and have attributed to 'simplicity' a purpose for which it should never exist. Simplicity in music should be inseparable from the genesis of the music. The poetry, the idea, should be first, and simplicity just a part of the expression.

"Children can discover the intrinsic value of music in an instant. They have a gift for discovering sincerity, and will accept no music that appears to have been written for their convenience. They want, and get, good stories, good legends, good poems—and their music must be good, also. It must have an idea, and if that idea appeals to their imagination it is surprising how they will work to master any passing difficulties."

"As a rule men of letters have a horror of music.... As for myself, I love any and all of music; eccentric, learned, and naive, that of Beethoven and that of the Spaniards of the *rue Taitbout*, Gluck and Chopin, Massenet and Saint-Saëns, the bamboula, Gounod's *Faust* and also his *Funeral March of a Marionette*, popular songs, itinerant organs, the tambourine as well as the bells. Music which dances and music which dreams, both speak to me, both arouse sensations within me. The Wagnerian melopoeia seizes upon me, envelops and hypnotizes me like the sea, and the zig-zag bowings of the Gypsy violinists have prevented my seeing the Exposition."—*Alphonse Daudet.*

Style 705

An Upright of Distinction

The Colonial Model shown above is believed to have had the widest sales recognition of any American piano of its type and price. It fits architecturally into the tasteful home of today. Musically it is so fine that Conservatories call for it. For it offers longer strings, larger soundboard and tone superiority to many Grands, all at a price commanding only an inferior Grand.

IVERS & POND PIANOS

are built today as from the first in **but one quality—the best**—with continuity of proprietorship and of artistic ideals. Over 500 Educational Institutions and 70,000 homes use them. Let us send you our catalog of fine Uprights, Grands and Players showing the newest and best tendencies in design.

How to Buy

Reliable dealers throughout the United States sell the *Ivers & Pond*. If none is near you, we can ship from the factory direct. We make expert selection and guarantee satisfaction or the piano returns at our expense for freights. Liberal allowance for old instruments in exchange. Attractive easy payment plans. For catalog and full information, *write us now.*

Cold Hands Spoil Many Lessons

By Lawrence D. Andrews

COLD hands spoil many lessons. This is discouraging to both teacher and student. The teacher knows he cannot judge the student's playing properly, for the playing is not normal. The student, laboring to make his rigid, unresponsive fingers do his bidding, becomes tense and nervous, and finally warms up just at the close of the lesson.

Some people have cold hands habitually. Their blood is thin and their circulation poor. Such persons should build up their general health by proper attention to diet, exercise, deep breathing, and rest. They should eat plenty of raw green stuff, cooked succulent vegetables *with the juice in which they were cooked* (especially spinach), and whole wheat grains instead of those which have been refined. Cool or cold baths in the morning, followed by vigorous rubbing and slapping of the body and by other exercises, also help. Plenty of rest, and freedom from worry are absolute necessities. Such people must expect to take time to build up good blood and circulation; for their cold hands are merely superficial symptoms.

But perhaps cold weather causes most cold hands. The student comes through the cold to his lesson, and hardly realizes that his fingers are cold and stiff until he comes into the waiting room or studio. What is he to do?

Hot water is the first remedy thought of, and if this is available it is fine. Let it be as hot as can be borne, and if possible, alternate with cold water. The hot draws the blood into the hands and the cold drives it out, thus producing a kind of pump-like action which is more efficacious than the hot water alone. End up with cold.

But it is seldom that hot and cold water are available. If there is a steam or hot water radiator in the studio the teacher should provide a pair of woolen gloves or mittens which can be left lying on the radiator for the use of students. With these gloves on, one can take hold of the coils of the radiator and warm his hands in a surprisingly short time.

Massage and exercise also are valuable aids in establishing circulation; though they seem a little slow if one is in a hurry. Rub each finger from the tip towards the knuckle (towards the heart) as if you were putting on a glove. Then rub the hands as if washing them. Alternately close and open the hands with vigorous, complete muscular exertions. Shake the hands vigorously. Grasp each finger in turn at the tip and rotate it from the knuckle in as large circles as possible.

Though this next suggestion involves an expense of several dollars, it is perhaps most generally available since it calls only for an electric connection. An electric warming pad, such as is ordinarily used in bed, can be attached to a socket, the pad wrapped around one's hands like a muff, and in a jiffy one's hands will be as warm as toast. The pad has the advantage of being portable, so that it can be taken to a concert when one is to play and when one wants to make sure of warm hands.

A word might be added about beginning practice at home, with no excuse for cold hands. When you are at home you can take time thoroughly to warm your hands before going to the piano. You will thus save much valuable time and effort; for it often takes half an hour or longer to get limbered up, if one begins with cold hands. Rubbing the keyboard with a warm, thick woolen cloth, will help to warm up the cold keys. A few minutes' application of one of the above devices will enable you to begin your work with maximum efficiency, and thus to get the most out of your lesson or practice period.

One Way of Curing a Bad Fault

By Ella E. Phillips

THERE are pupils, and pupils. Some forget what they are told the minute after it is done; and some never listen in the first place. Some have fingers like sticks and some like cushions of velvet. But the most provoking one that I ever had persisted in playing notes when there were none. No matter how many notes the piece contained, she was sure to add a few dozen more, thus so changing the piece that it was scarcely recognizable.

Talking did no good, scolding did less; and I was at my wit's end to find a way to stop it. Finally I hit upon a scheme. At one lesson I suggested that she write a little line of music for me—she was fairly well advanced—in the fourth grade. I suggested that she try her hand at composing just a line or so.

She seemed quite pleased, and at the next lesson presented four short lines for my approval. I sat down to play them. It was a simple melody well written, and I was surprised that she should show so much talent in this direction. But when I played it I purposely added note after note, lots of them, which I could see made her quite angry.

"You didn't play it as I wrote it," she scolded.

"Are you offended?" I asked.

"Well, no," she said slowly, "but why didn't you play it the way I wrote it?"

Then I started my little lecture.

"Now, my dear," I said gently, "what I have just done you have been doing for three years. I have offended you and you have been offending those great composers, but they were not here to hear you. It's a wonder they did not turn over in their graves! Think of it! A mere beginner like you trying to improve the works of the great masters. That is, you think that you are improving them, when in reality you are distorting and mangling them."

Well, need I continue? My little ruse worked, and incidentally I have found out that one of my pupils has a real gift for composing.

There Is
One Cream Perfect
for Every Use

To develop and keep a clear, soft smooth skin you need only use

Ingram's
Milkweed Cream

It is a thorough cleanser and yet light enough in body to form a comfortable foundation for powder. But it has certain *remedial* properties that subdue redness, roughness, tan, freckles and such imperfections. Whether you use it as a cleanser, a protection, or a powder base, its nourishing and healing properties will bring fresh beauty and new life to your skin.

Used by discriminating women for more than thirty years.

A little scientific care now may save months of effort later on. Get a jar at your druggist's today, the dollar jar is the more economical for you.

Or send ten cents (coin or stamps) for generous sample with the Dermascope which will prove its beneficial effect.

How to Keep Your Music Shelves in Order

By Marcus A. Hackney

A CERTAIN brother-musician has originated a choice and expressive new phrase: *"It is extensively whence!"* This, when he couldn't find a piece which he had already begun to practice. When one has a very large quantity of sheet music, to mislay a piece is often as bad as to have it destroyed or stolen; if it happens, for instance, to be folded in the pages of some other piece, it may not be found for years. Even though the musical library may be as yet very small, it is an excellent plan to take care of it and to have some proper system in its arrangement, for if you stay in the same game as years go on, it will surely grow to an unexpected size.

It is really impossible to keep a stock of loose, printed music looking as neat and respectable as a shelf of books, and this leads some, as soon as they can afford it, to have their sheet music bound in book form. This, however, is not to be recommended. Books do not stay open well on the music rack, and they are a heavy load to carry if you wish to take them anywhere, especially if the pieces you want happen to be in several different books. For preservation and neatness, plain folders, made of tough, cream-colored manila paper cut the proper size, are the best thing possible. It is not even desirable, in most cases, to sew or wire the sheets in.

The top of the piano is one of the poorest places to let music accumulate. Everyone should have some suitable music shelves. If one cannot afford those very excellent little cabinets with shallow drawers, which are seen advertised in the pages of musical magazines, a simple set of shelves, such as may be made by a carpenter or by anyone handy with tools, will answer the purpose just as well. A door in front, to keep out dust, is highly desirable, but not indispensable.

In regard to the system of sorting, opinions differ. What may be the handiest for one person may not prove so for another; but *any* system is better than none. Some sort alphabetically by composer's names, some alphabetically by titles; others (including the present writer), according to the varied uses for which the music is intended. Where one's music is all of one kind—all piano, all vocal, or the like, possibly the first-named systems may be preferable, but where one has several different sorts, and especially when there are several members of the family whose musical pursuits are various, this last way is most satisfactory.

Just as a practical illustration of the way it works out, and not with any intention to hold ourselves up as a model, the writer will describe his own manner of keeping music sorted. He has an oak cabinet a little over four feet high, with eleven shelves, each 12 by 16 inches, and a door that will lock. From one shelf to the next, the space is about four inches, and the shelves are labeled as follows:

Unsorted.
Present use.
Junior's music.
Blank music paper.
Manuscript copies.
Music for piano pupils.
Music for violin pupils.
Piano music.
Piano music (duets, etc.).
Organ music.
Borrowed.

The top and bottom shelves deserve a word of explanation. Sometimes one is in a hurry in putting away a piece and has not time to think of its right classification; it is much better, then, to put it in the unsorted pile for future attention than to put it away inadvertently in the *wrong* place where it would be harder to find. From time to time one can properly sort out the things on the "unsorted" shelf, without any great labor. In regard to the pieces on the "borrowed" shelf, their presence there serves as a reminder to return them seasonably, and also makes them easy to find, should there be a sudden call for them from the owner.

But this only accounts for a small fraction of the printed music in the writer's possession. A cheap set of wooden shelves in a back room, about five feet high and three feet wide, holds a number of piles of the following sorts: Piano music, Violin music, Chamber music with piano, Chamber music without piano, Orchestra music (popular), Orchestra music (classical), Octavo anthems, Octavo music (secular), Operas, Oratorios and Cantatas, Catalogs, Scrap-books and Programs, Files of THE ETUDE. From time to time such pieces as are to be in present use are picked out and placed on the shelf so labeled in the smaller cabinet, to be returned again to their former places when the occasion has gone by for their use.

For books on musical topics, a special shelf is reserved on the ordinary bookcase.

What To Do With Inconvenient Sizes

Occasionally it happens that some piece of music is printed in a form which makes it impossible to file conveniently in its proper place, for instance, if one has a carefully sorted cabinet of octavo anthems, and happens to get hold of an anthem printed in sheet music size. In such a case, the best thing to do is to lay it away on almost any shelf of the proper size which is not very full, and, to insure its being found when wanted, *prepare a "dummy" octavo-size on blank paper or cardboard bearing the name of the piece in question and telling just where to look for it.* This is a hint borrowed from the keeper of a college library.

Of course, all this systematic sorting and arrangement takes time and care, but it is easy work, and may be done in odd times: and, when all is said and done, it is not half so much trouble as trying to find some piece "extensively whence."

KIMBALL

"The Instrument of Yesterday, Today and Tomorrow"

KIMBALL Pianos and Kimball Pipe Organs are made by the same firm, and have an established reputation for correct construction, artistic voicing, and qualities that endure. Clarence Eddy, dean of organists, refers to the Kimball as a "wonderful organ."

Harrison M. Wild, conductor of the Apollo and Mendelssohn Clubs, and an organist of eminence, says of the Kimball, "All that a human could ask in beautiful tone." Frank C. Van Dusen says, "Responsive beyond technical demands of any organist, and tonally superb."

Kimball Pianos and Pipe Organs satisfy the most exacting.

Does Organ Practice Injure Piano Playing?

A Symposium by Eminent Organists

EVERY once in a while we hear some musically ignorant person exclaim that organ playing is injurious to the best piano playing. A number of opinions of this kind soon develop into a tradition and the idea becomes fixed. The important thing is to get at the truth and the real truth. A group of organists in Philadelphia have discussed this in a way that would possibly parallel any similar group in America. One pointed out that while one does not hear of famous pianists who are also organists, or of organists who are also pianists, it is nevertheless the fact that there have been many who have been equally gifted in playing both instruments. Handel was an accomplished performer at the keyboard of the organ as well as at that of the Harpsichord. Mendelssohn played both piano and organ and was quite as successful upon one instrument as upon the other. Frederic Lamond, the famous Scotch pianist, who has a world-wide reputation as an interpreter of Beethoven, was for many years an organist. There are numerous other instances.

The fact that American economic conditions are such that the average musician seeks an organ post in order to be sure of a certain portion of his income, has compelled many American musicians to become organists for their own protection. It is also true that in recent years organ posts have become very lucrative in some cities, due to the high prices paid to moving picture organists. On the other hand there are many pianists who have been kept away from organ playing because they fear that it will mean the end of their piano playing.

We are frankly of the opinion that the organ does not hurt piano playing but may help it. What does happen, however, is that both instruments do demand a great amount of time and attention. They are mutually beneficial; but if one attempts to become a master upon either instrument the time required in these days of advanced technic and musical attainments is so great that if one plays one instrument well it is hard to get the time to develop the other. For this reason it is sometimes well to become a master upon the one you select for your major instrument before taking up another. Fritz Kreisler plays the piano finely; but it is upon the violin that he is acclaimed as a master. Two instruments may be mutually helpful; but very few artists have ever had more than one instrument or have become equally famous for performance upon two instruments. Emil Pauer seemed to play the violin and the piano equally well; but, after all, his greater fame was as a conductor, and few people think of him as a pianist or as a violinist.

Preston Ware Orem

Preston Ware Orem, well known to thousands of American organists, because of his excellent collections and editions of organ works, gave the following comments:

"Organ playing, properly taught, unquestionably helps the pianist. It has the effect of making him more exact. It makes his legato vastly better, because he plays this legato with his brains as well as with his fingers. Indeed, the touch, in the case of the modern organ, makes that of the pianist more elastic. Organ playing makes the pianist a better sight reader. Why? Simply because the man who plays the organ has a thousand and one things to think about in the way of pedaling and registration of which the pianist never dreams. When he goes back to the piano all of his attention is concentrated upon sight reading and he is surprised at how simple it is. Organ playing makes the pianist a better polyphonic player because he becomes accustomed on the organ to hear the different voice parts with different organ qualities of tone."

Frederick Maxson

Frederick Maxson, organist of the First Baptist Church of Philadelphia, and a well-known concert organist, has a feeling that the piano touch is not injured by organ playing. "In fact," said Mr. Maxson, "I have a very strong conviction that it is helped very materially. Organ playing requires a peculiar kind and degree of intelligence. It reaches out to far more details than does piano playing. Organ pupils have to be meticulously precise about the legato. Good organ playing without a good legato is unthinkable. More than this the organist has to learn how to phrase, and he must learn how to make his phrasing a part of the larger whole. Nothing is so dull as organ playing without good phrasing. This in itself is an art. The modern organ lends itself to phrasing in a way which was inconceivable in the older organs. For instance, the much more responsive keys and the quick speaking pipes permit wonderful staccato effects. The agogic accents must be carefully observed; and these two make phrasing much easier upon the organ.

"Many organists play the piano exceedingly well. Saint Saëns is perhaps the best example of the brilliant organist and the brilliant pianist and it is reported that he played two great piano concertos in Berlin. Best played the piano well; but was better known as an organist. It is said, however, that when he was invited to 'open' an organ in Italy he spent some days in preliminary practice upon the instrument. Every day an old man with long white hair came silently into the church and sat during the practice periods of the English master. Finally Best inquired who his faithful admirer was. The attendant answered, 'That is the Abbe Liszt.'

"It is a fine thing for organists to study the piano first. Most organ students come to the instrument with excellent ability in piano playing. Everything one does right in piano playing eventually proves of value in organ playing. Of course if one has learned to play the piano indifferently, the organ teacher has a difficult work ahead of him. It is a great saving to acquire one's technic on the organ first through the study of the piano."

Paul Bliss

Paul Bliss, composer of a vast amount of well-known music for the church and for chorus, who was a pupil of Guilmant in Paris for three years, says:

"Of course organs have changed wonderfully. I played on several of the great French organs when they were of the old action. These were *tours de force* in the real sense. It demanded about all one's strength to play them at that time. I remember a famous organ in the east, that I used to play. I would remove my coat and vest and go for it much as one would wrestle with a bear. At the end I would be in a dripping perspiration. The effort was not unlike that which one would put out in moving several tons of coal. I can not see how such an experience would help one's piano playing. Piano playing depends upon great finger sensitiveness and nimbleness. Such an organ tended to blunt the fingers, if that term might be used. The modern organ however has very much the same touch as the piano."

Henry S. Fry

Henry S. Fry, former President of the National Association of Organists, and now Dean of the American Guild of Organists of Pennsylvania, and organist at St. Clement's in Philadelphia says:

"I am strongly of the opinion that, unless the pianist keeps up his piano practice as an entirely distinct and separate thing, his piano touch will suffer from organ playing. This is true of the modern organ with the very sensitive touch. The touch seems to many like that of the piano, but they are really quite different. The piano touch is adapted to sounding wires and is a very sensitive thing. The piano specialists may call it a pressure touch and all that, but it must be percussive to a degree to throw the piano hammer against the wires. The organ mechanism is entirely different and purely pressure. It is very light and very quick. Perhaps one may play even more rapidly on the organ than on the piano; but the touch calls for a different kind of effort; and unless one keeps up the piano practice the touch is likely to become sluggish and inert. Of course the organist is always able to play the piano; but that something which one hears in the touch of Paderewski, Lhévinne, Bauer and others, vanishes unless it is kept up with a great deal of practice."

Humphrey J. Stewart

MUNICIPAL ORGANIST OF SAN DIEGO, CALIFORNIA

I HAVE always contended that a well-developed piano technic is indispensable for good organ playing; and, furthermore, that the cultivation of organ touch is very helpful to the pianist.

In this connection I may cite the experience of Thalberg, who in his day represented the highest development of pianistic art. Thalberg contended that the legato touch, which is so essential for the pianist, could only be perfected by constant practice on the organ. For this purpose he provided himself with a small reed organ, which he used daily. This little instrument, bearing Thalberg's autograph, used to be in the possession of James Kendrick Pyne, organist of Manchester Cathedral, England. We should also remember the advice of Schumann, who spoke from the standpoint of the pianist—to lose no opportunity of practicing on the organ.

Mr. Frank Taft

WELL-KNOWN CONCERT ORGANIST

IN piano playing the most delicate gradations of "touch" are absolutely necessary for artistic interpretation. In organ playing the moment the wind enters a pipe it instantly speaks at its full strength, regardless of how delicately or hard a key is depressed.

As far as the organ keys are concerned, accent effects, which may be considered as "touch," are only obtained by disturbing the regular rhythmic flow of the music, usually by holding the keys down for an extra infinitesimal length of time.

The constant playing of an organ and seldom playing of a piano will certainly injure the piano "touch." The constant playing of a piano and seldom playing of an organ is not detrimental to the playing of either instrument.

In developing and maintaining keyboard "technic," the playing of one instrument is unquestionably of benefit to the other; but very few, if any, players have ever become equally distinguished virtuosi in both fields of activity.

Charles Galloway

WELL-KNOWN CHURCH AND CONCERT ORGANIST

I DO not believe that the playing of an organ is injurious to one's piano touch; but I do feel convinced that he who thinks of, meditates upon, dreams about, and works at real worth-while organ compositions, will eventually find himself both technically and temperamentally unable to cope with at least much, if not most, of the big, solid, inspiring works which have been written for the piano, especially many of the compositions by modern composers. On the other hand, I have observed that the piano compositions by Bach, when played by an organist, on a piano, generally receive a more musicianly, shall I say traditionally, Bach-like, interpretation that when played by one who has studied only the piano; but this is only natural, provided the organist was fortunate enough to receive a good foundation on the piano before beginning his special study of the organ.

The piano-organist, like the old family doctor, has had his day; at least, our would-be versatile friend is not taken seriously nowadays by people who know—his (in some cases) degrees, insignias, honors, and general air of pomposity notwithstanding.

Another "bird" I wish to see swatted is the organ builder (spare the mark) that builds a Three Manual and Echo Organ, but with only One Stop in the Pedal Division!!

Rollo F. Maitland

NOTED CHURCH AND CONCERT ORGANIST

IT does not; if the right kind of organ technic is used, and if piano practice is kept up.

The common assertion that the technic required for the two instruments is entirely different is only partly true, and is less so in these days of the modern concert organ than in the days of the old tracker-action church organ. True, the pianist gets his variation in tone-color by his finger-technic, and the organist by his use of stops; but, to give life to organ playing, the same force, snap, and virility should be used that is employed by the pianist to get the key down to the socket, which is his object, whether the result be a loud or a soft tone.

So many technical requirements are common to both instruments. Phrasing is done practically the same way; and the legato, non-legato, staccato, leggiero, and pizzicato touches are practically the same on both keyboards.

The really important difference between the touch of the organ and that of the piano is the lightness of the former as compared with the latter. In view of this fact a pianist playing the organ should not neglect his piano practice, else he will find his fingers lacking in strength when he returns to the piano. This is the one serious manner in which playing the organ might injure a pianist's technic; but if piano practice is kept up this should not happen.

"Nothing," said Robert Schumann, "helps to cure a young pianist of slovenly habits so much as a little practice on the organ. There is no sustaining pedal on the organ to cover up a multitude of sins."

I believe it would be very difficult for one to become a great artist at both instruments, unless he could devote all his time for several years to them. The requirements of both instruments are very great, and the concert literature of each occupies its own place. Still, a certain amount of organ playing, even a good deal of it, will never harm any pianist.

Ellis Clark Hammann

MR. HAMMANN'S services are greatly in demand as a pianist and as an accompanist in New York and Philadelphia. For many years he has been one of the leading organists of Philadelphia.

"In response to your letter I am sending you a few lines hoping it may be of use to you.

"My experience has been that organ and piano playing do not interfere with each other. I started studying the piano when eight years old and the organ when I was nine. The organs that I played on for ten years were the old-fashioned type with very heavy action when coupling the manuals. Yet I never found that it interfered with my piano work. The modern organ has a lighter action than most pianos. A good legato on the organ is helpful for a legato on the piano. I feel that this idea of piano and organ playing interfering with each other is erroneous. It depends greatly upon the musicianship of the individual."

Clarence Eddy

EMINENT AMERICAN CONCERT ORGANIST

"As to my opinion regarding piano versus organ touch, I can see no harm arising to an organist from practicing or playing the piano considerably. On the contrary, it should result in a great positive gain in the matter of technic, and consequently in a greater variety of touch and phrasing. But this is a rule which does not work both ways. In other words, I would not advise anyone who wants to excel as a pianist to devote very much time to practicing or playing the organ; for the clinging touch necessary to good organ playing, if persisted in to any great extent, is fatal to lightness of touch, freedom and brilliancy, which are required in successful piano playing. It might be a good thing for pianists to go occasionally to the organ, and 'test out' their legato playing; for they will be surprised to learn how imperfect it really is and how much they rely upon the damper pedal!

"In the matter of key-resistance, the modern organ, with its electro-pneumatic action, is quite as easy of manipulation as its smaller sister the piano, and, therefore, Herculean strength of muscle is not called for, even in the production of the most powerful and gigantic effects. The trend of much modern organ music is towards excessive speed and brilliancy, which requires far greater technical dexterity and a more highly developed manual and pedal technic than was ever dreamed of by the classical school of organ playing. However, as technic is only a means to an end, I would finally caution all organists to bear in mind constantly this fact, that the organ is not a piano, nor is it merely a vehicle for astonishing technical display."

Ralph Kinder

ORGANIST, HOLY TRINITY, PHILADELPHIA

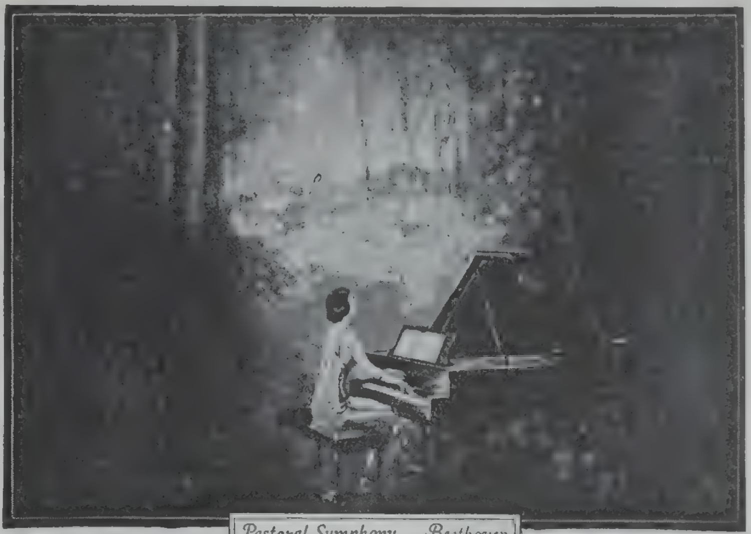
"As a teacher of both piano and organ I have not the slightest hesitancy in declaring that an 'organ touch' is helpful in piano playing and that piano technic is a necessity in organ playing. I constantly urge my organ pupils to play the piano as much as possible, while my piano pupils secure, I believe, a much better tone from their instrument by applying the correct 'organ touch' in their work."

Edwin H. Lemare

EMINENT CONCERT ORGANIST, NOW MUNICIPAL ORGANIST AT CHATTANOOGA, TENNESSEE

"THE technic of the pianist and that of the organist is alike in some respects and yet different in others. The dynamics of piano playing are controlled by the varied pressures or blows from the 'playing muscles,' and in the organ by stops and swell shades. A rapid and clear-cut finger movement is essential in both instruments; even when playing *legato*. So far as I am aware there are no other muscles brought into play in one instrument than in the other. The player instinctively accommodates himself at the moment to either instrument.

"In the old-time organs, however, with their heavy mechanical or tracker action, there was naturally some doubt as to the advisability of a good pianist straining his muscles unnecessarily; or, on the other hand, over-developing them for piano playing. But it must be remembered that during the last few years organ building has made rapid strides, including the new 'Toggle Touch' (to which I lay claim for the idea) which, if properly made, is to all intents and purposes the nearest approach to a piano touch made possible on the organ. Such a touch is the reverse of the unsatisfactory and impossible *spring* touch as first used in the modern pneumatic and electric organs, where the upward pressure against the finger, *when the key was fully depressed*, was often doubled or trebled owing to the increased tension of the spring. To play constantly on one of these spring touches would undoubtedly be more harmful to a good piano technic than even the old tracker action, where, after you had overcome the air resistance of the pallet, there was at least a distinct reduction of its weight when the key was at the bottom. With the new toggle touch there is a delightful *resistance* at the top, as in a piano, and a reduction of at least fifty per cent. in the weight when the key is depressed. This new touch is now extensively used by the leading organ builders, both in this country and in England; and I would suggest that all good pianists who wish also to play the organ insist that it is incorporated, although to this day many of the less advanced builders have failed



Pastoral Symphony . . . Beethoven

A piano of distinction

LIFE is, or it is not. There is no medium. Just so in a few rare instruments there is that inspiration that spurs the artist to the greatest heights, while others fail to touch his spirit and leave him cold. High among these chosen few, many of our foremost musicians place the Weaver Piano.

Play on this perfect instrument and learn its power to interpret your every thought. Let us direct you to the nearest Weaver dealer. Weaver Piano Co., Inc., York, Pa. Weaver, York and Livingston Pianos and Player Pianos.

THE BROEKHOVEN COURSE IN MUSICAL COMPOSITION FOR BEGINNERS

Approved as a Correspondence School under the laws of the State of New York

This short course of twenty-five lessons will teach you to compose a melody—harmonize it—arrange an accompaniment—orchestrate it for orchestra and band—adapt it for male, female and mixed chorus—and give you the forms of popular music in a

Practical, Clear and Complete Course

A correspondence course specially prepared and personally supervised by J. Van Broekhoven, of whose standard work on Harmony 19,000 copies have been sold in the United States; a text book used in the Paris Conservatory.

JOHN PHILIP SOUSA'S OPINION OF THIS COURSE

My Dear Mr. Van Broekhoven:

'It affords me great pleasure to speak in the highest terms of your splendid exercises known as **The Broekhoven Course in Musical Composition.**

Your practical experience of many years, together with the consummate technical knowledge, leaves you thoroughly equipped to produce a work of benefit to those embracing the musical profession. I wish you every success in this great undertaking; for you deserve it.

Very sincerely,
JOHN PHILIP SOUSA.

SUMMY'S CORNER

Two new publications which will be of much interest to progressive teachers

"ALTHEA'S SAMPLER"

By John Mokrejs

Price - - - - $ .60

The author of this work is known for his interesting compositions for children. "Althea's Sampler" is invaluable for use with very young children. Mr. Mokrejs uses "old material" in a "new way." Altho the mind of the child is elusive, it is often caught and held by that which is novel. Therefore some of the first fundamentals are presented here in quaint story form, illustrated by characters impersonating note values, staff degrees and the scale. Special attention is given to the self-discovery of natural rhythm. Color names are used in the training of Positive and Relative Pitch. The whole compiled with such a clear musical insight into modern needs that important first steps are learned with no apparent effort and given a permanent place in the child's mind. Decidedly a teaching device of genuine value.

"THE STORY OF CINDERELLA"

Pictured in six piano pieces

By Ethel Lyon

Cinderella's Sisters - - $ .30
The Prince and Cinderella .30
The Ball Begins - - - .30
Colonial Slippers - - - $ .30
The Happy Lovers - - - .50
The Happy Ending - - - .40
Complete—"Summy Edition" No. 112 - - $1.00

Quaint little pieces portraying the important happenings in the story of Cinderella and the Prince. In the form of Gavotte, Waltz, Minuet, March, Rondo. Of exceptionally good musicianship, each one contains excellent teaching material and presents special opportunities for fine interpretive work. Attractive for use en suite for recital purposes—equally appropriate to use separately.

to adopt it. In England I first worked out the idea with the well-known firm of Norman & Beard, the builders of the great organs in the Colston Hall, Bristol; Norwich Cathedral, and other important buildings, who at once adopted it as their standard, and, incidentally, called it the Lemare Touch.

"With such conditions the pianist can safely practice on the organ. In fact, the greater his technic on the piano the greater will be his ease when playing rapid and intricate passages in organ music.

"To be a good organist it is first essential to become a good pianist; and I see no reason, with a properly regulated touch, why organ playing could in any way be harmful to the pianist."

J. Warren Andrews

Past Warden of the American Guild of Organists

"Replying to your query: I consider that one instrument helps the other. In past years, when the touch of a large organ was such as to develop the muscle needed by the blacksmith, the playing of the organ was undoubtedly harmful to a facile piano technic. Now, however, most of the organs are supplied with an action often superior to that of the finest piano; further than this, the organ is as quick of speech as the piano, and the only limit in speed at the organ is the ability of the performer. Aside from this, the organ is most helpful in forming a good singing legato touch, which, once acquired, is never lost. During all the years of my teaching I have always advocated the use of the pedal piano for acquiring an organ technic. This stroke for a percussion touch is absolutely essential for a crisp and clear organ performance. It is sometimes difficult to convince a young organ student that the practice at the piano is best, because of his desire to be at the organ; but those who have produced the best results have been those with the best piano technic. In fact, a student must be a fairly skillful pianist before taking up the organ. It is time wasted to begin organ study unless the piano has first been diligently studied.

"To my mind, the only reason why most performers are not equally skillful upon both instruments is simply that the *love for one outweighs the love for the other,* and not because of a difference in touch or technic. I do not believe that the study of one instrument is *in any way* detrimental to the other, and that the idea that it is is a fallacy."

Alexander Russell

Concert Director, Wanamaker New York Auditorium; Music Director, Princeton University

"There is no reason why playing the modern organ should injure one's piano touch. It is possible to play both instruments well. One need only cite the case of Saint-Saëns as an example. In fact, playing the organ should be of great help to the pianist, particularly in developing a mental sense of *sostenuto* and a physical sense of *legato*. If the performer has mastered the principles of relaxation, his technic will immediately adapt itself to the instrument upon which he is playing, whether it be piano or organ. The chief danger against which one must guard is the possible loss of power and endurance caused by playing too much upon the light action of a modern organ. This danger can be avoided by dividing the practice between the two instruments, which will then supplement each other.

"On the other hand, a thorough knowledge and fair mastery of the piano is essential to good organ playing. The greatest organists have been and are men who have also won distinction as pianists, even though this may have been in their student days. The crisp, short vibration of the piano tone trains the ear in musical accuracy, while the piano action trains the fingers in physical accuracy, independence and strength. It is impossible to learn to play the organ well without a fundamental grounding in piano technic.

"To become a virtuoso on either instrument, however, it is obvious that one must devote one's chief attention to that instrument."

A Comparison of Handel and Bach

By Rose Frim

Bach and Handel, exact contemporaries as to their date of birth, were markedly different in their professional careers and in their musical characteristics. Percy A. Sholes, in "A Listeners' History of Music" makes the following contrasts which are helpful to the lay reader in mentally placing the attainments of these great men.

Handel was more of the practical man, and Bach more of the idealist.

Handel's was the polished, traveled, cosmopolitan mind, Bach's the more rugged mind of the student who has spent solitary days and nights in intensive work in his own study.

Handel always had some (quite legitimate) money-making scheme in view when composing; he was thus directing his activities to the winning of the suffrages of a large public, whereas Bach very frequently composed merely to satisfy his own need for self-expression or solve to his own satisfaction some problem of musical form or style.

Bach's choral-writing is more genuinely contrapuntal than Handel's; the one is to the other as Northern Gothic (organic "growth" of lines into structure) to Southern Gothic (the Gothic shapes but cut out of the flat); in other words, Handel's harmonic basis is simpler and is more clearly before his mind.

Bach's key-board writing is much more thorough than Handel's which, though effective, is often "sketchy," Bach was evidently prepared to spend time on the writing of a fugue, whilst Handel wished to "throw it off" and have done with it.

Handel's Solo vocal music is usually much more graceful than Bach's, but Bach's often attains the deeper expression; here again Handel was fluent, Bach "thorough."

A good deal of the difference between Bach and Handel might be expressed in this way—Bach was an organist widened out and Handel an opera-manager deepened.

Essentially, Handel is more modern than Bach.

Both Handel and Bach have religious feeling and great dignity, but Bach's is that of some fine old "Friend," rising in his Quaker meeting house, because the spirit moves him, and Handel's that of an Anglican dean, decorously, sincerely, and perhaps just a little pompously officiating in his vestments.

What Organists Say

"The power of self-criticism is one of the most valuable endowments a musician can have."—Hamilton C. Macdougall.

"The important thing is to make up the mind that, come what will, there shall be professional advancement; everything else will follow."—Hamilton C. Macdougall.

"Every organist should be a leader or a leading factor for the advancement of music in his community, independently and outside of his church."
—Herbert Stavely Sammond.

Question and Answer Department

Conducted by Arthur de Guichard

Always send your full name and address. No questions will be answered when this has been neglected.

Only your initials or a chosen nom de plume will be printed.

Make your questions short and to the point.

Questions regarding particular pieces, metronomic markings, etc., not likely to be of interest to the greater number of ETUDE readers will not be considered.

Hand, wrist and arm exercises—Duration of Practice.

Q. (1) Please advise me as to so-called systems of finger, wrist, forearm and arm calisthenics as an aid to piano technic. (2) Which would bring best results (a) four or five hours daily practice? (b) four or five hours, plus twenty minutes' calisthenics, or would this be too great a strain on muscles? (c) less than four hours, plus twenty minutes' calisthenics? (3) Is typewriting injurious to piano touch? If so, please point out a possible "antidote."—A. E. S., St. Anne's Ave., N. Y. C.

A. 1 The practice of any "finger, wrist, forearm and arm" gymnastics *away from the piano keyboard* is not recommended. The majority of first-class pianists are against their use except in conjunction with the piano. This is especially the case with the employment of mechanical apparatus. Some of them, in exceptional instances, may afford a certain degree of help; but it will be found, as a general thing, that mechanical appliances induce muscularity, stiffness, rigidity and loss of virtuosity, with the sure result of impaired touch and loss of depth of tone. Do your finger, wrist, forearm and arm work at the keyboard of your piano, entirely. 2 Omit the side-practice of calisthenics and practice daily as long as possible *without any sensation of fatigue, either muscular or mental.* If any muscular fatigue is felt, it is a sure sign of tension and an improper use of the part fatigued. Avoid all feeling of tiredness. Cease practicing before fatigue occurs. Remember always that the chief factor of profitable practice is the action of the mind. It must be fully alert; as soon as it is tired or begins to wander, cease practicing. 3 Typewriting cannot be beneficial to piano touch; it may even be very injurious according to the way you strike the letter keys. If forced to use a typewriting machine, do so by keeping the hand, fingers and wrist as loose as possible, touch the keys as lightly as may be and with the cushions of the fingers, the same as for piano-touch. As soon as you can, after typing, seek your piano and there try to counteract any rigidity you may have acquired.

To Acquire a Soft Touch.

Q. Please tell me how to obtain a "soft touch." I can't seem to get the beauty out of the pieces, and mother says that it sounds "like a dish-pan."—M. A. H., Canton, O.

A. Practice your scales and finger exercises *slowly, very slowly; think all the time* (a) of the quality desired; (b) of the position of hands and fingers; (c) of a constant endeavor to obtain perfect equality of weight and depth of touch of each finger, after you have obtained the ideal touch for the first note—for equality and evenness of touch means *equality and evenness of tone;* let the fourth and fifth fingers give the same weight and quality of touch as the thumb and second.—The position of the hand, for the purpose of acquiring this "soft touch." Place the hand almost flat on the keys, touching them with the fleshy cushion of each finger (except thumb, which strikes on the side near to nail), the hand inclined towards the thumb; *no stiffness of finger whatever.* This position is excellent for obtaining a soft, slow, singing touch, round and velvety. When the required quality of notes is attained, the pace may be increased, but *very gradually.* Too rapid practice is responsible for the vast majority of failures among pianists. GOLDEN RULE: *Practice slowly and concentrate your thought* upon all you do, even upon a simple five-finger exercise.

Some Questions from Afar.

Q. Pray accept my thanks for answering, in THE ETUDE, *the questions I sent you some time ago, and kindly favor again with answers to the following: (1) Is it possible for a teacher in the Public Schools, who has to use his voice all day in talking, to develop a beautiful singing-voice? Should he take lessons in vocal culture? As a singer, would he be handicapped through his work as a school teacher? (2) Who was the greater tenor, Tamberlik or Caruso? (3) What is meant by "program music?"*—Zealous, Christ Church, Barbados, B. W. I.

A. Very pleased to help you; come again. 1 There is here a double question: a. To develop a beautiful singing voice; b. To develop a singing-voice to become beautiful. If the voice is beautiful as a beginning, it may be developed in power, in compass and in agility, but any practice for these purposes may be undertaken *only after* the voice has been thoroughly rested from the fatigue of constant talking. Singers who talk much, damage their vocal quality. It is, therefore, (b) a much more difficult problem to make a singing-voice beautiful, when handicapped by the constant strain of talking. It is a common-sense proposition. Then again, what is your "talking" like? Is it natural? Forced? Nasal? Guttural? Affected—hence, throaty? Not more than one in a thousand speaks correctly. Anyhow, to develop the voice (beautiful or not) lessons in singing are indispensable. 2 Mrs. Malaprop has told us that "comparisons are odorous!" How then compare Tamberlik's voice, which was on the wane in 1873, the year of Caruso's birth? All that can be said of Tamberlik is what Grove tells us: "He possessed a splendid tenor voice, of great richness of tone and volume, reaching C in alt, which he gave with tremendous power, and 'as clear as a bell.' He was singularly handsome and an admirable actor." Very "old-timers" will vote for Tamberlik, perhaps correctly; "present-timers" who have not heard the other may decide for Caruso. As, says the Englishman: "You pays your money and you 'as your ch(o)ice." 3. Program music—as opposed to absolute abstract music, which is pure, for it is simply an endeavor to depict beauty (the greatest beauty) by means of musical sounds—is music which is arranged or composed to illustrate a positive state of mind, a concrete thing or action, the progress of a story and its episodes, and so forth. The music accompanying a film story is program music; abstract music is entirely independent of any other art.

How to Practice the Trill, or "Shake."—The Tremolo.

Q. What is the best way to practice the shake and a tremolo in pianoforte playing?—W. McR., Sharon, Mass.

A. Begin the practice *very slowly* gradually increasing the pace as greater facility is gained. At first, lightly press down all five notes, practice by pairs of fingers, keeping the hand and the other fingers motionless, thus: 1.2, 2.3, 3.4, 4.5. Do this on every pair of conjunct notes of the scale of C; then of E flat, playing the thumb and the fifth finger, as above, on the black keys. After the student has succeeded in suppressing all unnecessary motion, the practice may be continued without holding any other keys. Also try other finger combinations: 2.4, 3.5, 4.1, 5.1 and so forth.—The difference between playing a trill and a tremolo is that the trill is played by means of the finger-joints only; whereas the tremolo is played with the hand and the forearm movement.

The Chief Object of Technic.

Q. There are books upon books of scales, arpeggios and all sorts and conditions of technical exercises and studies; what is their main object? I am quite aware that there may be minor objects, but there must be one that is pre-eminent. What is it?—J. J. H., Boston, Mass.

A. Most assuredly there are many objects that may be, and are, acquired by means of technical studies and exercises, but the chief aim, the alpha and omega of perfect piano playing is the acquisition of *muscular independence.* To succeed in obtaining this, *it is the mind* which has to be educated and concentrated on that object constantly throughout the practice period. Mere mechanism without mind is worth nothing.

Vocal Records—to Imitate or not to Imitate.

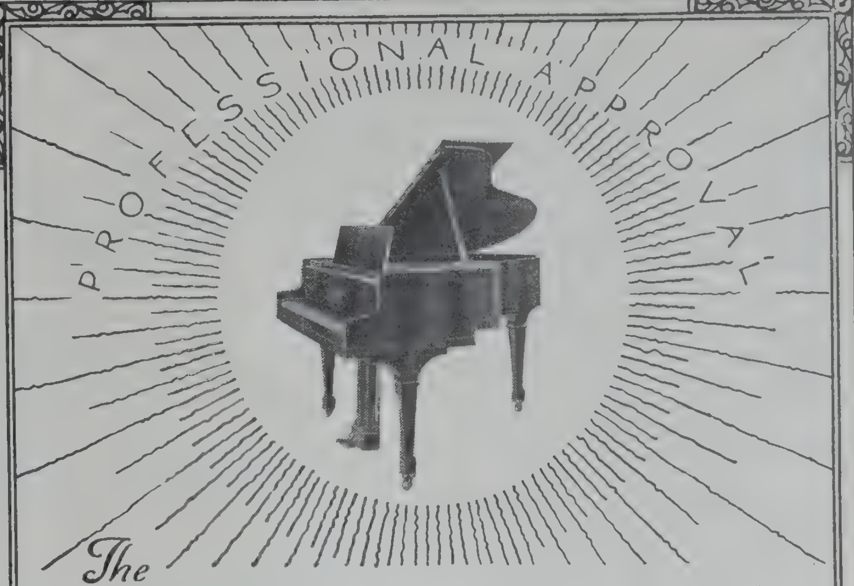
Q. (a) Is it advisable to listen to records of a song before attempting to learn it? (b) My teacher says that I do not know what quality of tones to get (c) as I cannot afford to go to the best concerts, I am recommended to imitate records of my pieces. What would you advise?—A. C. D., Providence, R. I.

A. (a) No. (b) It is your teacher's duty to show you and to make you understand and produce the right quality of emission and resonance of voice. If he or she cannot do that, a change is advisable. (c) Would you also imitate the peculiar scratch and swish of the machine? No. Now, before you attempt to sing songs, you must learn to sing good, even scales throughout your entire compass of voice, with pure tones, freely emitted. This is the essential preparation of your vocal instrument, in the same way that you would require to have your piano in good condition, tuned and regulated, before playing on it, in order that your music might be melodious and euphonious and not cacophonous. When your voice and its method in general are satisfactory, you may make use of it in the study of diction and song. Do not attempt to imitate vocal records for vocal quality, but only for interpretation and style—and even so, interpretation should be your own individual divination and message.

Ostinato—Basso.

Q. What is meant by "ostinato" and "bass ostinato?"—R. J., Troy, N. Y.

A. *Ostinato* (Italian, obstinate) indicates a figure that is constantly repeated. It may occur in any part, but it is usually employed in the bass, when it is termed *basso obstinato* (obstinate bass or ground bass). It consists of a bass figure of some four or eight measures, constantly repeated, each repetition having a different melody and harmony. All the old, classical composers employed this device.



The
Premier Aristocrat Model
Price, $725

"A revelation in quality and price" is how a well-known music teacher recently characterized this nationally popular small grand.

This five foot, 3 inch instrument should have the immediate consideration of every teacher, student and conservatory requiring a small grand piano of inherent musical excellence, and purchasable at a most moderate price. ***"The Magic of Music,"*** our Art Brochure, in detail tells the story of the Premier—America's Foremost Popular Priced Small Grand—and explains why this instrument has won the dominating position in its field.

Send for *your* copy of "The Magic of Music" today.

See and hear the Premier at your Dealer's before selecting *any* piano. If you cannot obtain locally, kindly advise and we shall see that you are promptly supplied.

Teachers—let me give you a regular
30c size tube of Kondon's— J.W. Kenyon

✓ We want school teachers to know and value Kondon's and to advise this healthy habit to their boys and girls. 3100 teachers accepted this offer last season

✓ Keep nose and head clear with Kondon's. It prevents infection, colds and catarrh. Just as important as cleaning the teeth.

✓ Send the names of 20 or more parents of your pupils. We will send you, not a sample, but a regular size 30c tube of Kondon's.

✓ Clip this ad. Mail it at once with the 20 or more names and addresses to Kondon Mfg. Co. Minneapolis, Minn.

Take these four steps for pupils' health

KONDON'S CATARRHAL JELLY SOLD BY ALL DEALERS

The Violinist's Etude

Edited by ROBERT BRAINE

It is the Ambition of THE ETUDE to make this Department "A Violinist's Magazine Complete in Itself"

The Curve of the Bow

THE first bows for string instruments were probably convex, the curve was outward. They were of various shapes; but the picture below gives an idea of the principle on which they were constructed, although some of them had a crude nut and point for fastening in the hair. It is probable that the idea of using a bow to produce musical sounds by rubbing it over a stretched string was discovered by some savage in pre-historic times, who made his discovery by using the bow with which he shot arrows. A later experimenter discovered that by rubbing rosin or some similar substance on the string or hair with which the bow was strung, a louder sound could be made; and there we had the germ of the modern violin bow.

With this early crude, convex violin bow, only primitive playing could be done, and if we had had to rely permanently on bows of this character the extraordinary heights to which the art of violin playing has been carried would never have been attained. Then came Francois Tourte, the "Stradivarius of the Bow," the greatest bow maker of all time. In a flash of genius he saw that the principle of the early convex bow was all wrong, that the stick should be concave, as shown in the picture of the modern violin bow, below.

Tourte devoted his life to the improvement and manufacture of violin bows. He is a remarkable example of an inventor who not only conceived the germ of his discovery, but also perfected it in every detail until his are the finest bows which ever have been made. There have been sales of Tourte bows at prices from $300 to $1,000. The most famous violinists use Tourte bows. Tourte also discovered that Pernambuco wood, which grows in South America, is the best wood for making violin bows. He also perfected the frog and fittings of the bow.

Here was the "lucky curve" (as the fountain pen manufacturers say in their advertisements) as the inward curve of the stick changed the entire character of the bow, increasing its power of drawing smooth, steady, sonorous tones from the violin in a really remarkable degree, and also making the "staccato bow" possible, as well as the different varieties of rebounding bows, *saltato, richochet.*

The study of the above pictures conveys several lessons to the violinist and student. First, the bow must not be screwed up too tight; for when the stick has been wound up to a point where it has lost its inner curve, as in Fig. 1, the advantages of Tourte's discovery are lost, and artistic violin playing is impossible. When screwed up too tight the bow returns to the principle of the early bow as shown in Fig. 1.

In buying a bow, one with an extremely limber stick must be avoided, since if the stick is too weak it will be necessary to screw it up too tight to retain the inward curve, yet if not screwed up very tight the stick will grate on the strings.

The stick should be stiff enough to hold the hair tight when the hair is at a moderate distance from the stick, the stick of the bow still retaining its inner curve.

The bow should be unscrewed always after playing, since if this is not done the stick gradually loses its inner curve and becomes straight or almost so. When this happens the advantages of the inner curve, discovered by Tourte, are lost. When the stick has become straight from being left screwed up, it usually happens that it must be screwed up still tighter to hold the hair tight enough. When this happens the stick assumes a convex shape as in Fig. 1.

Stage Fright and the Violinist

MANY violin students who have suffered much from stage fright, the first few times they have ventured to play in public, jump to the conclusion that they will never be able to overcome it and might as well give up public playing. In this they make a great mistake; for, while there are no doubt a very few violinists who never succeed in doing themselves justice in public work, the great majority are able to overcome stage fright.

Violin amateurs somehow have become possessed of the notion that professional players never suffer from nervousness or stage fright when playing in public. Never was there a greater mistake. Very few professionals, even the greatest, entirely escape this bugbear, especially when they are playing new works for the first time, or upon important occasions where their reputations are at stake.

I have often heard the bow of a great violinist tremble on the strings at the commencement of a great concerto; and it would be some measures before he "found himself" and played with his habitual "nerve" and fire. Many great violinists dread to go on the stage and commence their work; but, like a plunge into cold water, it is all right in a minute or so. The reaction and "after-glow" come and then they are quite without fear.

Orators and actors suffer from stage fright in the same way as musicians. Demosthenes, greatest of Greek orators, was a failure at first in his public orations. We are told that he was determined to overcome his timidity and halting delivery, and to help in this he used to go to the seashore where, amid the noise of the breakers, he would declaim for hours with his mouth full of pebbles, trying to overcome the handicaps of the noise of the waves and the discomfort of the mouthful of pebbles.

Many of the great orators have confessed that they had a constant fight against stage fright. John B. Gough, the great temperance orator, used to suffer agonies before facing an audience; and, one speech done, he felt that he never wanted to make another. As soon as he had launched into his speech, however, all stage-fright and timidity vanished and he thundered away with tremendous enthusiasm.

In our own day we are told by the eminent actress, Ethel Barrymore, that she suffered from stage fright every time she appeared in a new rôle. Jane Cowl, another well-known actress, who had such a phenomenal run in *Romeo and Juliet,* on Broadway, also confesses to having endured much suffering from stage fright at different times in her career. We are told that, as a school girl, she fainted from fright when expected to play a piano solo, and was too nervous to read her valedictory essay. Then, when she had become a dramatic star, with years of experience, she postponed playing her most successful rôle for three years before she could nerve herself to appear in it before the public.

The late Teresa Carreno, the famous pianist, told a music critic who had complimented her on her fine rendition of the Liszt *Polonaise in E,* that she had completely mastered this composition and could play it half a dozen times in succession without missing a note, three years before she dared to play it in public.

Many violin students, having made a failure, or partial failure the first few times they essay a public performance, lose their nerve, and cannot be induced to make another attempt. They hypnotize themselves into the belief that they will break down if they try to play in public; and as a consequence they do the very thing they fear.

Musical stage fright almost invariably can be overcome, if the student only will go about it right. So many students make their first public plunge at a comparatively important concert or public event, and also make the mistake of playing a composition which is too hard for them to play in private, let alone in public. The best plan for the student who wishes to do public playing is to commence by playing at unimportant events. He should play for his relatives first, then for a few friends, then for informal affairs in private houses. In doing playing of this character he will feel every confidence, because he will feel that a little break down will not much matter; and because he does not fear it, the break down is not likely to come. Having acquired the requisite confidence in playing for his friends and neighbors, and at informal social events, he can take more important engagements, such as little concerts and entertainments in small halls, or in churches. He will be gaining confidence all the time; and as time goes on he will finally arrive at the stage of being able to play at important concerts and musical events without suffering from nervousness.

The piece chosen for a public performance should not be the most difficult in the student's repertoire, but one which is really easy for him. The student who feels that he can really play his composition faces the audience with every confidence, whereas if he dreads breaking down at certain difficult points, it is pretty sure that the "breakdowns" will occur. The reason that great artists play with such confidence is that they have studied their repertoires for years, and the selections have become really easy for them.

Do not memorize a piece in a hurry, completing the memorizing a few days before the concert when it is to be played. The pupil who does this will be in constant fear lest he break down at doubtful points. It is best to have the memorizing completed at least a month before the public performance. If there is any danger of slips of memory, the music should be used, as it is distressing to an audience to see the student's memory continually failing him.

The pupil who starts the study of the violin under ten years of age, has a great advantage when it comes to playing in public. Young children rarely suffer from stage fright, and the child who is continually playing in public from his earliest years never learns "stage fright," as he has always been accustomed to audiences.

The Love of Music in High Places

IT is remarkable what a large number of men eminent in other professions have found pleasure and relaxation in music. General Charles G. Dawes, Republican candidate for Vice-President (the running mate of President Calvin Coolidge) has taken a lifelong interest in the violin and is a violinist of no mean skill. He is also a composer and has written many successful pieces for the violin, of which his "Melody in A Major" is the best known and considered his best work. This composition has been played in public by Fritz Kreisler and other famous violinists and has been recorded for the phonograph by Mr. Kreisler. General Dawes has also given generous aid to many young violinists, has helped them to complete their education and in appearing before the public.

The late President Warren G. Harding played the cornet and other band instruments, in his early years, and became so proficient that he became a member of a band which took professional engagements.

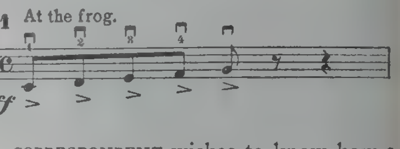
Thomas Jefferson, one of the greatest of Americans, was a violinist and became quite proficient on the king of instruments. His violin can still be seen in a museum with other Jefferson relics.

The late H. O. Havemeyer, millionaire president of the Sugar Trust, was an adept on the violin and sought relaxation and recreation in its beautiful tones, after a hard day in Wall Street, and high finance. Mr. Havemeyer bought the famous King Joseph Guarnerius violin for $12,000, for his own use, one of the most famous of all Guarnerius violins and which has now increased in value to $20,000 at least.

The Duke of Edinburgh, brother of the late King Edward of England, was a skillful violinist and won the popular sobriquet of the "Royal fiddler," in England. He frequently played in public, for various charities. His violin, a splendid Stradivarius, as part of a famous collection, was purchased about two years ago by a firm of American violin dealers and was placed on the market at $25,000.

Marcato Passages

Ex. 1



A CORRESPONDENT wishes to know how a passage marked as above should be played, and what the special advantages of such a bowing are. A bowing with a down bow for each note is only occasionally met with in violin playing, and is used when the utmost emphasis is required. It is always executed at the frog of the bow; and after each note is played, the bow must be *lifted and a return to the frog made.* This bowing is most effective for passages on the G string, although it is occasionally used on the others.

You may have noticed that occasionally a virtuoso pianist uses the point of the thumb to pick out occasional notes or series of notes with a hammer-like stroke, which are meant to stand out from the text like gilt letters on a sign board. It is similar passages for the violin which are played all with down bows at the frog.

This "all-down-bow" mode of rendering extremely marcato passages is not what is technically known in violin playing as the *"martelé"* (hammered) stroke, which is executed between the middle and the point, with up and down bowing; but it is well designed to execute "hammered" (*martelé*) passages of a certain character.

The most important thing in the execution of this bowing is that the bow must be returned to the frog after each stroke, and not dragged along the string in a series of down bows, one commencing where the other leaves off, like the following:

Violin Questions Answered

By MR. BRAINE

Imitation Stainer.

M. R.—The violin dealer was no doubt correct in his opinion that your violin is an imitation Stainer. By a "factory" violin is meant one which is wholly or partially made by machinery or by very cheap hand labor, with little attention being given to the graduation and to the finishing and fitting up of the violin. 2—I would not advise you to try to remove the brand on the back of the violin, as there is no object in doing so.

Modern Violin Values.

A. C.—In justice to its advertisers, THE ETUDE does not express opinions as to the value of violins by modern makers. Besides, I would have to see the violin to express an opinion, as different violins made by the same maker differ very greatly as regards their quality. 2—You will find an extended discussion regarding the Hopf volins in THE ETUDE for August, 1922, which you could order from the publisher. 3—The requisites of a good bow are that it should be made of Pernambuco wood; that the stick should be straight and not too limber; that it should possess the proper elasticity, should be of the proper weight, and have the correct inner curve. If you are an advanced pupil in violin playing, a bow costing $20 to $25 might answer. Concert violinists often pay hundreds of dollars for genuine Tourte bows made by Francois Tourte, the greatest bow maker. You can buy cheap bows, of course, for $2 or $3, but it is bad economy to buy bows of this quality.

Improving Tone Quality.

E. A. J.—Keep your violin tuned at all times to international pitch. You can do this by getting a tuning fork or pitch pipe of this pitch. 2—A good repairer can sometimes improve the quality of a violin by re-graduation, by changing the sound-post or bass bar, or by making other changes, but not always.

French Terms.

G. M. D. A.—The translations of the words in the Ysaye Meditation, which you cannot find in your musical dictionary, are as follows: *cedes,* gradually slower; *sans lenteur,* without dragging; *sans presser,* without hurrying; *sans haste,* without increasing the tempo. These words are from the French language.

Success Requirements.

F. D.—It is quite impossible for me to give an opinion in regard to your talent and ability as a violinist without hearing you play. However, if you have the proper talent you are not too old to become an artistic violinist, if you practice persistently in the right way. The most hopeful sign about your letter is your enthusiasm for violin playing. This is the most important thing of all—to really love music, and to play with "deep feeling and emotion," which your letter says you do.

Self-Teaching.

W. A. H.—Your letter asks if it would be possible for you to learn to play a few popular violin selections by the aid of a self-instructor, or whether "you would make better headway by having the local fiddler give you lessons." If this "local fiddler" in your town knows anything about violin playing and teaching, and is not simply a country fiddler who fiddles a few jigs by "air," you would be wise in taking lessons from him, as trying to teach yourself is a shocking waste of time. If you decide to try to learn by yourself, you might get "Self Instruction," a class method for violin playing, by Albert G. Mitchell, published by the Ditson Co., New York City.

Dangers of Self-Learning.

M. W.—You ask to be cited to a self-instruction book for the violin which will give you a solid foundation in technic, "one that when you are able to take violin lessons from a good teacher of the instrument, you will have no bad habits, or incorrect methods to undo." If you expect to be in a position in the near future to take lessons from a good teacher, you will gain time by not trying to learn by yourself. No matter how excellent the books are which you use for self-instruction, you will find that you will acquire so many faults and wrong methods that when you finally come to a teacher you will have to be put back "before the beginning;" that is, it will take a long time and the exertion of much will power to undo all the bad habits which you have fallen into. It is hard enough to learn to play the violin with the assistance of a good teacher, let alone groping blindly by yourself. However, if you would like to make the attempt without a teacher, probably the work, "Self Instruction," a class method for the violin by Albert G. Mitchell, published by the Oliver Ditson Co., New York City, would be as good as anything.

Preparation for "Scene de Ballet."

G. E.—1—In the first place, a pupil who is only far enough advanced to play the Mazas Special Exercises, Op. 36, Book 1, has no business trying to play the *Scene de Ballet;* for. to play a solo of this difficulty, the pupil should be at least half through Kreutzer. 2—If the pupil finds the Mazas Special Exercises too difficult, possibly a change to the Kayser Studies, Op. 20, would be better. However, I could not say definitely without hearing the pupil. 3—The easier forms of scale work can be taken up after the first few weeks, and scale work must be continued indefinitely until the most advanced forms are reached.

Carlo Tononi.

L. A. P.—There was a Carlo Tononi, Bologna (Italy), 1690-1720. He was the son of Felice Tononi and a violin maker of some note. Your violin was no doubt made by another Tononi—Carlo Antonio Tononi, Venice (Italy), 1728-1770. He was the son of Giovanni Tononi of Bologna (Italy) and his violins bear an excellent reputation. His labels read as follows: "Carlo Tononi Bolognese. Fece in Venezia, l'Anno——." A writer on Italian violins says of his work: "His model is large and well developed in all respects. His varnish is of a very fine quality, varying from a deep red to a light orange. His tone is beautiful in character—resonant and mellow."

Not Genuine.

A. E.—Neither of your violins can be genuine, since one is branded "Conservatory Violin," and the other "Model Antonious Stradivarius." This means that it is an imitation Strad.

Pfretzschner.

J. H. F.—Johann Gottlob Pfretzschner was a German violin maker of the Markneukirchen school. He made some excellent instruments, copying the Cremonese school as far as possible.

Musin Method.

S. F. A.—One of the most comprehensive works for the study of the violin according to the principles of the Belgian method is "The Belgian Violin School," by Ovide Musin, formerly a concert violinist and now a teacher of the violin in New York City. It is published by the Musin Publishing Co., New York City. Mr. Musin was a pupil of Leonard, a famous representative of the Belgian school. The work is in four volumes.

F. A.—As you are under instructions, your teacher is the proper one to decide what works you should study, as he is naturally in a better position to prescribe a proper course of study than a perfect stranger who has never heard you play and does not know your needs.

Scale of G Fingering.

T. R.—The Kreutzer Studies are mostly of the fifth and sixth grades; Fiorillo Studies, sixth grade. 2—Either method of fingering the G major scale would do, but the first fingering you send, by the way of the first, third, and fifth positions, is the easiest. 3—It is a matter of opinion as to who is the "greatest violinist in the world." There is no one violinist who is universally recognized as the greatest.

A List of Studies.

G. M.—I would advise you to get the little work. "Violin Teaching and Violin Study," by Eugene Gruenberg, published by Carl Fischer, New York City. This work treats of the various branches of violin playing, and also contains lists of studies and pieces suitable to the violin student at various stages of his progress. If you do not care to get this work, you might get the following studies: Hermann, Violin School, Books I and II; Kayser, Studies, Op. 20; Mazas Special studies, Op. 36; Sevcik, Bowing Exercises. Op. 3; Schradieck, Scale Studies; Kreutzer, Studies; Fiorillo, Studies; Rode, Caprices.

Selling Stradivarius.

G. J. K.—There is always ready sale for genuine Stradivarius violins. Any large dealer in old violins can sell it for you, or would buy it, if genuine. There is, however, not more than one chance in a million that yours is a real Strad, as there are millions of imitations. You would have to ship the violin to the dealer for examination, as written descriptions of the violin and the label would tell the dealer nothing.

The Best Rosin.

T. R.—The best form of rosin is the kind that comes in oblong wooden boxes, as this offers the largest surface to the hair of the bow, and the rosin can be applied much quicker and better than in other shapes. The round, cylindrical cakes of rosin offer too little surface to the hair.

Richard Duke.

M. E. F.—Richard Duke, London, 1730-1780, was one of the best English violin makers, and a good specimen of his work is of considerable value. His copies of Amati violins are very well done. There are a great number of imitation Duke's, and many other violins which are not imitations have spurious Duke labels. You would have to submit your violin to an expert to find whether it is genuine, and also to ascertain its value.

Square Notes.

B. D.—The "square" notes to which you refer are played as harmonics. In playing harmonics the finger touches the string lightly instead of pressing it tightly to the fingerboard. There are two kinds of harmonics, natural and artificial. Natural harmonics are played with a single finger pressed lightly on the open string at the point indicated in the music. In playing artificial harmonics two fingers are involved; one finger presses the string firmly to the fingerboard, and the other finger touches the string lightly further up the string. Playing harmonics is a branch of violin playing which is difficult, and which should be studied with a good teacher. 2—You will find the list of words which you send, in any musical dictionary.

Be the Saxophone Teacher of Your Town

Many teachers of music are increasing their incomes by teaching the Saxophone - now the most popular instrument. We are selling thousands of Saxophones to young people who expect to teach themselves because teachers are not available, but who would learn much more rapidly with intelligent supervision.

This is your opportunity to greatly increase your income. The Saxophone is the easiest of all instruments to play. With your fundamental knowledge of music, you can master it in a few weeks and be ready to teach. We shall gladly refer pupils to you. You can soon make a reputation for yourself as a Saxophone teacher and you'll enjoy it. It need not interfere with your regular work.

"Music Paper"

By E. H. P.

"Sheets of blank paper are no trifling gift to a poet," so said Martial, the old Roman epigramist. We might make a similar remark in regard to ruled music-paper for a musician. It is a somewhat expensive article at present, and it is astonishing what an amount of it gets used from time to time, even by those who are not professional composers. There are occasional copying and arranging to be done, and students of harmony and other branches of musical theory use immense quantities of it for their exercises. While the best of paper is none too good, for purposes which demand permanence and wearing qualities, it would nevertheless be a good thing if there were a cheaper quality put on the market, made up in convenient tablets like the paper tablets on the market for school use, of a size about 9 by 12 inches.

In the days of Bach and Handel, music paper was ruled by hand—a tedious job. We are not able to discover at just what date ruled music-paper was first put on the market. In a trunk full of old music in the possession of one of those hereditary families of musicians which are found occasionally in Germany, the writer has seen a number of manuscripts which were written on paper ruled with a five-pointed ruling pen also, he has seen such pens still for sale by music-dealers, but either the multiple ruling-pens of the present day are inferior to the old ones, or the proper use of them is a lost art, for not only could he not succeed in making one of them work, but he never met any one else who could. Further, he never met any one who had even *heard* of any one else who could. Their value, apparently, is somewhat problematic.

Ordinary music stores generally carry but one style of music paper, that ruled with twelve staves to a page, which is convenient for the most common purposes; but many other styles of ruling, suited to special requirements, may be had from any of the large music houses, for instance, 10, 14, 16 18 or 20 staves to a page; "voice and piano," with extra room left between the voice staff and the piano part, for the words; rulings the long way of the page (preferred by some for organ music); score paper for orchestra scores, with the name of each instrument printed in the proper place; the same thing for military band. There are still other varieties besides those we have mentioned for instance very small-sized sheets for band parts to be used on the march. It is said that Richard Strauss was obliged to have special music paper printed for his colossal scores, as he used a greater number of instrumental parts than any regular score paper makes provision for.

Poor Schubert, whose immense and incessant productivity in musical composition nevertheless failed to bring him very substantial returns, was always running short of paper, and found it quite a serious expense to be met. The original manuscript of his *Octette*, a lengthy composition for string and wind instruments, is written on two or three different styles of paper, which would hint at his having used up whatever he had left, instead of buying a sufficient supply of the most suitable kind.

Music paper, as commonly manufactured, is not very highly sized. This makes the surface more agreeable to the eye, but demands special treatment when writing with ink; one should use the blackest ink possible—not a bluish "writing fluid," and should let it dry naturally, never using a blotter, as the latter will cause it to blur. If obliged to make erasures with the penknife, the correct notes should first be written in with a pencil. Afterward the pencil lines may be traced over carefully with pen and ink. Otherwise the ink may spread over the erased portion and make an unsightly blot.

The beautiful cover of this issue reproduces the painting by D. E. Sutton, made especially for the Souvenir Program of the great pageant, "The Inspired City," given with immense artistic success by the Philadelphia Music League, and is thus presented to the readers of the "Etude" through the courtesy of the President of the League, Dr. Herbert J. Tily and the Director, Mrs. Frederick W. Abbott.

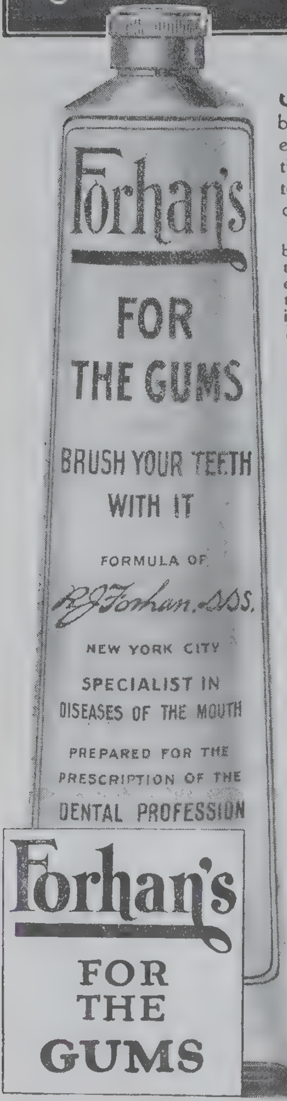
A Request from the New York Public Library

The New York Public Library is anxious to complete certain of its files from which copies of THE ETUDE are missing. ETUDE readers having the following copies and desiring to dispose of them, are requested to correspond with Mr. Charles Collier, Chief of the Acquisition Division, New York Public Library, 478 Fifth Avenue, New York, N. Y. It is a matter of pride to the editors of THE ETUDE to note that the great libraries here and abroad (including the British Museum) have taken great care to secure complete files of THE ETUDE. The copies desired by the New York Public Library are

Vols. 1 to 5; Vol. 6, Nos. 1 to 11; Vol. 8, No. 2;
Vol. 11, Nos. 5, 8; Vol. 13, Nos. 3, 12; Vol. 14,
No. 3; Vol. 15, No. 2; previous to 1898.

We trust that some of our friends may assist the Public Library in its quest.

The dread Pyorrhea begins with bleeding gums



Forhan's
FOR THE GUMS

Forhan's
FOR THE GUMS

JUST as the strength of a building is dependent upon its foundations, so are healthy teeth dependent upon healthy gums.

Permit the gums to become inflamed or tender and you weaken the foundation of the teeth. This condition is called Pyorrhea. Loosening of teeth is a direct result. And spongy, receding gums invite painful tooth-base decay. They act, too, as so many doorways for disease germs to enter the system—infecting the joints or tonsils—or causing other ailments.

Pyorrhea attacks *four out of five* people who are over forty. And many under that age, also. Its first symptom is tender gums. So you should look to your gums! Use Forhan's, which positively prevents Pyorrhea if used in time and used consistently. It also scientifically cleans the teeth—keeps them white and clean. Brush your teeth with it.

If gum-shrinkage has already set in, start using Forhan's and consult a dentist immediately for special treatment.

A Titled Musician Speaks

By D. X. Kyrbi

Of the generation just past, no English composer left a greater impress upon the musical world than Sir Hubert Parry. As a composer his influence, especially upon church music of Great Britain and America, has been enormous. As Principal of the Royal College of Music, he left an incalculable effect upon the lives and artistic ideals of an army of the younger of British musicians as well as a contingent of foreigners. From one of his talks to the young people under his guidance he said:

"The beauty of order is that there is so much more room for things. If you have twenty letters by post of a morning, and open them and throw them all down helter-skelter on the table, they look perfectly awful—it looks as if it would be best to put them in the waste-basket at once, and not try to answer them. But if you put them in a few piles, in accordance with the nature of their contents they look ever so much smaller, and you don't despair of answering them at all.

"Now one of your first objects in life is to get as much into it as you can. When you get old enough to look back, you will get a bit worried not to have done some things that were worth doing; and it is always well to remember we each have a little spell to get things done, and we do not get the chance to get them done again. The older you get, the shorter you will find your one chance; and the only way to pack life as full as it will hold is to put its contents into some sort of order. But there is no order that does for every one; and every one has to find the order that suits his disposition best—and that is where the room comes for your impulses and queernesses."

How Big Is a Band?

There seems to be no definite idea of the exact number which should constitute the wind band. The English bands of the line regiments for many years had about forty members. At times they were under this in size and at times larger. The leading German bands run from fifty-four to seventy-six players. Some especially large bands have appeared from time to time in Germany. The Gilmore band had sixty-six men. Lt. Comm. Sousa, during the war, had Navy Bands approximating three hundred men. His regular organization has carried as many as one hundred. The Philippine Constabulary band has one hundred players; and it may surprise our readers to learn that there are a number of excellent bands in the Philippines numbering forty to fifty players. Many schools and colleges have excellent bands with fifty to one hundred members. It may be said that, while a band of from sixteen to twenty produces very interesting results, a really effective band does not commence until the number reaches twenty-four or twenty-five. A good concert band is quite different in effect from the brass band. Even with the addition of brass clarinets, used in England and on the continent, occasionally the brass band which has a distinctive place can hardly compete with the concert band in which both brass and wood instruments are used. The brass instruments are learned with comparative ease and their massed effect is very striking. This has led to the great number of industrial bands in England and in America. There are literally thousands of such bands now. The band contests held in various parts of England are watched as eagerly as the Olympic games. The contests are believed to have promoted a splendid spirit among the workers.

Very often the ignorant music lover gets an idea that the great masters ignored the military band. Quite the contrary is true. The band has fascinated many of them; and several, including Mozart, Beethoven, Cherubini, Berlioz and Mendelssohn, wrote especially for the band. In this day, when invention has improved the wind instruments wonderfully and expanded their compass, it is not surprising to find composers turning to the palette of the band to find new and ingenious color-effects.

Over the Footlights

By Helen Oliphant Bates

Why do actors put on grease paints? Simply because the footlights would make them appear unnatural without them. The extra paints make one look hideous in daylight; but on the stage they are necessary. Just so in music, many pianists play on the concert stage in a way that would not be acceptable in the salon.

How often has your teacher corrected you upon a point which you felt certain you had executed as she desired. Take for example an accent. Perhaps you thought you played the accent; and perhaps you did. But possibly your hearers did not hear it. It is one thing to hear any effect which you produce yourself; and it is another thing to hear one which comes over the footlights from a piano a good many feet away. It is always necessary to consider whether you have made your meaning clear enough to carry to those who are listening.

Teachers' Discounts

A number of well-known music publishers have inaugurated a movement which is designed to take away gradually all discounts from teachers.

In brief, their plan (to which we are fundamentally opposed) is—

> On all music printed after June 1st, 1924, no discount will be allowed to the teacher.
>
> On all music printed prior to June 1st, 1924, the teacher will be allowed the old discount.

This plan will not affect prices very much this season, but gradually, as new editions are printed, they will be marked at a lower price on which no discount will be allowed. This plan is called "Net, no discount."

We are absolutely opposed to any plan which abolishes all discount to teachers. We feel that the teacher is entitled to some compensation for the trouble, time and money expended in selecting music supplies for pupils.

The principle of giving a discount to all who buy to sell again is universal in all professions and industries. The music teacher is surely entitled to just compensation for this quite as much as the doctor, the dentist, the school teacher, the artist, the plumber or the contractor.

Therefore, we shall continue giving to all of the profession a liberal discount upon all of our own publications and a smaller discount upon music we do not publish. We ask our patrons to allow us to use our judgment in their interests, in substituting, where the editions asked for can not be procured except at a retail rate.

In all cases we will send the best edition available at the best rate available. We are confident of the loyal coöperation of professional teachers in our stand to uphold their rights.

We believe most emphatically that the removal of the teachers' discount is an injustice unwarranted by the conditions of the trade and a great hardship to many hard-working teachers who have spent their lives in developing the art of music and also in supporting the interests of the publisher.

Save Time and Money By Mail Order Music Buying

Getting one's music supplies by mail passed from the experimental stage long ago. It is now one of the fixed commercial customs universally observed. The tremendous growth of interest in music in all its branches has made music buyers in every community; unfortunately, the vast extent and diversity of musical needs can rarely be supplied except in the largest commercial centers. Throughout the length and breadth of the land there are relatively few music houses carrying a sufficiently complete and varied stock with which to meet even the current demands of the average community. This is not the fault of the local dealer, since, all things considered, there is but a limited field for his enterprise and he cannot afford to carry a large supply of articles important in themselves but limited in immediate saleableness. The music teacher who wishes to keep abreast of the times is frequently compelled to look to the larger sources of supply, or worry along with whatever may be had close by. Under such conditions the practically unlimited resources of the Presser organization offer the best solution of the problem. The *Presser service* is designed and operated with a single purpose, and that is, to save time, money and effort for music teachers and professional musicians. *Presser* publications meet all the everyday requirements of teaching and professional work; they are attainable at prices much below those usually asked and they are delivered to the teacher with all possible promptness.

The advantages of the *Presser service* including as it does a ready supply of the publications of all houses, the prompt filling of all orders and generous terms of settlement are at all times available to any music teacher who makes application and submits information as to branches taught and the number of students enrolled. A postal card addressed to this house briefly presenting the suggested data will bring a prompt and interesting response.

How to Succeed in Singing By A. Buzzi-Peccia

We have the honor to announce the publication of this new work by one of the most distinguished vocal teachers of the times, Signor A. Buzzi-Peccia. The author is the son of an eminent Italian "master of bel canto" who taught many famous singers. The son has sought to embody in this book much of the lore that has come down to him, combined with his own experience. His work as a musician has been highly lauded by Verdi, Puccini, Toscanini and others. His own pupils have included such noted singers as Alma Gluck and Sophie Braslau. Signor A. Buzzi-Peccia's songs have been sung with great success by many of the foremost singers. They have a very great sale. No one is better qualified vocally to know what he is talking about, from opera to the parlor recital, than this famous Maestro. His book will be eagerly read by singers who covet success. The special introductory price is 60 cents, postpaid.

The Value of the "On Sale" Plan To Teachers

Nothing is more disappointing to both teacher and pupil than to have the lesson hour arrive and the planned study or piece not at hand. If this condition should occur frequently, it is bound to retard the pupil's progress and certainly is no credit to the teacher. Teachers of experience for years have provided against such disappointments by using the conveniences of the THEO. PRESSER CO. service known as the "On Sale" Plan.

For those who are not acquainted with the plan, let us state briefly, that it consists of sending to the teacher a supply of music sufficient to meet the demands of the teaching season. All of this music is sent subject to the THEO. PRESSER CO.'S usual liberal professional discounts. The music is kept by the teacher in the studio throughout the year and used from as the needs arise. At the end of the season, in June or July, all unused copies are returned. Full credit is allowed on the return of all unsold copies and a statement for the balance sent to the teacher. A circular describing the "On Sale" plan and its conditions will be sent to anyone interested.

That this system of dealing is a popular one with the profession is proved by the fact that thousands of teachers annually avail themselves of its privileges. This year the number of "On Sale" patrons is unusually large and at times the volume of orders has fairly swamped the large corps of efficient clerks who handle this branch of the business.

"On Sale" orders are shipped at any time during the year and the service is by no means confined to piano teachers. Voice, violin and organ teachers use its conveniences as well as school supervisors and choir and chorus conductors. Every teacher and professional musician is invited to try this plan.

Thanksgiving and Christmas Music

Choir directors will find many fine Thanksgiving Anthems in our catalog and among the novelties, we would mention:

Now Thank We All Our God, *Huerter*
Praise to God, Immortal Praise, *Stults*
Prayer of Thanksgiving, *Netherlands*
Praise the Lord, O My Soul, *Smart*
Worship the Lord, *Watson*

A wealth of material is offered for the Christmas services in Cantatas, Anthems, Solos and Sunday School services.

The Promised Child, for Mixed Voices by R. M. Stults, is new this year and bids fair to be one of the season's best sellers. Mr. Stults always writes interestingly and his cantatas are eagerly taken up by choirs all over the country.

The Awakening, for treble voices, by William Baines, will prove an excellent work for the Junior Choir. This cantata is tuneful and if solo voices are not obtainable, unison singing can be effectively used for the solo passages.

The New-born King by Paul Ambrose is a lovely Christmas solo and it is published for both high and low voices.

To Sunday Schools, looking for a high-class Christmas service, we recommend *The Christmas Story, The Sweetest Ever Told.* Send for a sample copy. It will please you. Orders for Christmas music on the "On Sale" Plan should be sent in as early as possible so that plenty of time may be taken for making a careful selection. Write us to-day.

Schubert Album

We are going to issue an album containing the most popular selections from this most gifted composer. The volume will contain selections that are within the grasp of the average pianist; the difficult things will be avoided. They will not only be original selections, but also some arranged by Heller and others, that have met with great success.

Schubert wrote a number of beautiful compositions, but there are not many selected volumes published. This excellent compilation may be had at the special price of 35 cents postpaid in advance of publication.

Etude Prize Cover Contest

For the reason that some artists and art schools desired more time to compete for the ETUDE Prize Cover Design Contest it was extended to December 1st.

The ETUDE is most anxious to have its covers "attractive." But "attractive" is not all. They should be *significant.* Found in the music rooms of nearly a quarter of a million homes, they must contribute to the beauty of the music room and they must be so inviting and so thought-provoking that the average person will "stop and look." In other words "mere prettiness" is not all we want. The covers should mean something. Will you kindly call the attention of all of your artist friends to the details of the offer which will be found upon another page in this issue. We want striking covers and we work very hard all the time to get them.

Little Suite for Two Violins In the First Position By Arthur Hartmann, Op. 19.

We have in preparation a very interesting and ingenious little work for the young violin student in this Little Suite for Two Violins, (in the First Position) by Mr. Arthur Hartmann. The composer is one of the foremost American concert violinists of the present day, and with his experience in composing, editing and transcribing other important publications for the Theo. Presser Co., it is not surprising that he should write such a useful and comprehensive work in such a simple way. For although this Suite is all in first position and not difficult by any means, it takes the pupil through various important finger and bow exercises—the trill, tremelo, the pizzicato, chromatics, the arpeggio and double stopping. It will prove very interesting to the pupil who likes to have his teacher "play along with him," and later as the pupil advances a little, added incentive may be secured by having the pupil play the teacher's part.

The special introductory price in advance of publication is 30 cents a copy, postpaid.

Eleven Indian Love Songs For Three-Part Chorus of Women's Voices By Thurlow Lieurance

In this new compilation Mr. Lieurance has included a number of his most popular Indian songs as follows: *By the Waters of Minnetonka, Pueblo Spring Song, Wium, Hear Thy Lover's Cry.* Other numbers less known but equally effective are: *Che-ma-we-yan, Sa-ma-we-no, Pretty Flower, Pa-pup-ooh, O'er the Indian Cradle, Ski-bi-bi-la, A Sioux Maiden's Dream.* All the numbers are arranged for a three-part chorus of women's voices. The arrangements are not difficult, but they are very telling. Each number has a complete piano accompaniment. This is a most interesting compilation, containing some worth-while program novelties.

The special introductory price in advance of publication is 30 cents per copy, postpaid.

The Crosspatch Fairies A Christmas Play With Music for Little Folks Music by Norwood Dale

A brand new idea for the Christmas entertainment. This little play with music does not emphasize the Christmas idea so much as it does the spirit of the holiday season, "making everyone happy." This is done in a most unusual way. We feel sure that the novel manner of treating the subject will appeal to all. The story, as written by Miss Turner, is full of delightful surprises and lines which the littlest tots will love to memorize. The music is very charming and, of course, suitable for children's voices. This little play may be given very simply or with rather elaborate staging, or it may be given in the home, and we recommend it to all those who are looking for a half hour entertainment to present sometime during the Christmas season. The costumes are fully described and are very easy to make, at little expense. Our advance of publication price for one copy only is 30 cents, postpaid.

Ruth—Sacred Cantata For Women's Voices
By Paul Bliss

Any time of the year this cantata is of use. The choruses may be sung in three parts, with two sopranos and an alto, but the second alto is added for larger bodies of singers. The story follows the Biblical text and with the exception of the prologue which may be omitted, all of the words are from the Bible or the Hymnal. The time required for rendition is about thirty minutes. The solo work is modern in treatment, but not too difficult. Requests are constantly received for a work of this sort and we call attention of Choirmasters and Choral Directors of Women's Colleges, Schools and Choruses to this satisfying work.

Our advance of publication price for one copy only is 25 cents, postpaid.

Pieces for the Development of Technic
By N. Louise Wright

We take pleasure in announcing for the first time the publication of a set of little study pieces by Miss N. Louise Wright. Each study is devoted to some special point, such as Relaxation in Chord Playing, The Trill with the Turn, Broken Chords, Double Thirds, The Scale, Arpeggios. These study pieces, which are of the second grade or a little beyond, are so planned that whatever is done by the right hand in one study, is also done by the left hand in the following study. These exercises have tuneful qualities and hence are interesting to play.

The special introductory price in advance of publication is 25 cents per copy, postpaid.

Album of Arpeggios For the Piano

The *Album of Trills* and the *Album of Scales* have both met with much favor. The *Third Volume* of the series, "Study Pieces for Special Purposes," devoted to *Arpeggios* is now well under way. This is one of the most interesting departments of modern technic and unusually attractive pieces have been selected to make up this volume. All possible types and variations of the Arpeggio form have been included. The album is, of course, of intermediate grade throughout. This should prove one of the most useful of the series. One cannot devote too much attention to Arpeggio playing.

The special introductory price in advance of publication is 30 cents per copy, postpaid.

Jolly Jingles For Little Fingers
By Helen L. Cramm

Miss Helen L. Cramm, who is a well-known musical writer and educator, has a long list of successes to her credit. She has been especially happy in her ability to produce teaching pieces that have proven interesting to young players. She seems to know just what is needed in this respect. The new volume, *Jolly Jingles for Little Fingers,* should prove equally successful as any of Miss Cramm's preceding works. The pieces are chiefly in the second grade; some are a little easier.

The special introductory price in advance of publication is 30 cents per copy, postpaid.

Cleopatra
Opera Burlesque of College Life
Book and Music
By John W. Brigham

A musical play for men is a decided novelty but something much sought after, nd we take pleasure in offering this novlty. The situations are so excruciatingly unny that we suggest plenty of rehearsals, o that the cast may get over laughing at themselves. The music is not difficult o memorize since the entire performance equires but 40 minutes, but it is most ffective. The costuming is very easily one without great expense. Boys' schools nd colleges, as well as community clubs will be most happy to get a play of this ort. Our advance of publication price or one copy only is 40 cents, postpaid.

Reverie Album For the Piano

Collections of pieces of the quieter and more expressive type are always in demand. In the past, we have published a number of such volumes including, *Tranquil Hours, Sunday Piano Music,* and *Album of Lyric Pieces.* Our new *Reverie Album* partakes of the characteristics of all three of these, being made up of pieces of the contemplative type. Some of the pieces, however, are of ornate character. All are of intermediate grade. The book is almost ready, but the special introductory offer will be continued during the current month.

The special introductory price in advance of publication is 35 cents per copy, postpaid.

The Cat Concert
By Russell Snively Gilbert

This book of entertaining little teaching pieces is now on the press. It will soon be ready. Young players cannot fail to be interested in the incidents depicted so musically in this clever little work. At the same time, real musical benefit will be derived from the practice of these pieces, as they are well constructed and have real educational value in addition to their picturesque qualities.

The special introductory price in advance of publication is 35 cents per copy, postpaid.

Rhythms for Young People
By Blanche Fox Steenman

This is in reality a valuable contribution to the literature of musical appreciation. There are very few volumes containing such a representation of classic and modern gems. Some of the works are in original form and others are transcribed. In point of difficulty none of the numbers go beyond the intermediate grade. Practically all of the classic and modern masters are represented and each one of these by several of his most popular inspirations. The volume is now about ready, but the special introductory offer will be continued during the current month.

The special introductory price in advance of publication is 50 cents per copy, postpaid.

Day Before Yesterday
Operetta for Children
By Cynthia Dodge

History is frequently a bugbear to the student, but Cynthia Dodge has here a new idea in that she makes the pages of history actually open up and the characters step out from different ages to tell us of their opinions of present-day affairs, as compared with their own. The situations are startling in contrast, and accompanied as they are by dialogue and song, the half hour or 40 minutes passes all too quickly. Sketches of the characters in costume are included in the book, and full descriptions for staging are also furnished. The choruses are written in unison, so that the entire work belongs to little folks. Our advance of publication price for one copy only is 40 cents, postpaid.

Vision of Deborah
Cantata for Mixed Voices
By Richard Kieserling

We have constant requests from choir directors for a cantata suitable for any season of the year and not only for Christmas, Easter or Thanksgiving, and we are very glad to call attention to this serious work which will soon be published. The story is taken from the Old Testament and is dramatic as expressed in the text matter which follows the Bible story exactly. The music has sufficient Oriental flavor to maintain an atmosphere which holds the interest from beginning to end. The solo voices will find plenty of opportunity for good work, and the choruses are not easy to do, although very musicianly in their construction. We believe that this is a work long sought and one which will be of the utmost usefulness. We believe that every choir director should examine it with great care. Our advance of publication price for one copy only is 30 cents, postpaid.

New Anthem Book

We will continue the series of Anthem Books which have been so successful. The object of this series is to supply a generous amount of good, usable material at a very reasonable price. The last one that we published was the Popular Choir Collection. We have published ten volumes in this series and this one which we are now introducing makes eleven. The title has not as yet been selected, so we simply put it down as "New Anthem Book."

The material in this new volume will be similar to the "Popular Choir Collection," anthems that have never been put in book form before. The selections contained in this book are the best sellers of the past two or three years. You can look forward to a very usable volume for the average choir. The special advance price for this book will be 20 cents postpaid.

Reflections for Music Students
By Sidney Silber

The art of embodying in a very few words a thought which can be instantly assimilated is one which has been coveted from ancient times. Mr. Silber is one of the busiest teachers of the West—his influence has reached out to thousands of pupils, but from the whirl of his activities he has found time now and then to jot down a crystallized thought upon music study. There can be no question that many of these epigrammatic reflections will "sink in" with numerous students. Teachers and students will find acquaintance with this book very profitable. Mr. Silber has dedicated the book to his friend, Josef Hofmann. The advance of publication price is 50 cents a copy.

Ten Busy Fingers
By Mabel Madison Watson

Miss Mabel Madison Watson is one of the most successful teachers of young students working along modern lines of instruction. Many of Miss Watson's books have proven very popular. The study pieces in this volume are supplied with verses in order to bring out the rhythms more clearly. The idea of these little studies is to cultivate also finger proficiency, independence and key-board knowledge. They can be used to the best advantage in second grade work.

The special introductory price in advance of publication is 25 cents per copy, postpaid.

Six Study Pieces in Thirds For the Piano
By Carl Moter

Double-note technic is one of the prime requisites in modern piano playing. One must begin of course with thirds before taking up the practice of the wider intervals. Serious double-note study should be begun in the third grade. For this purpose the new studies by Mr. Carl Moter afford a very happy medium. Each of the six study pieces is totally different and each one is based upon a different rhythm, but in each case thirds are used continuously either in one hand or the other. The pieces are very musical, all of them.

The special introductory price in advance of publication is 25 cents per copy, postpaid.

The Music Scrap Book
By N. L. Wright

This is a new work which we have undertaken to publish. It is a book for beginners, almost a kindergarten volume. If you have any young pupils to start, this book is just what is needed, as they do not want an extensive volume. It is made up by a very practical teacher, who presents the very first teachings of music in a very interesting manner. After the rudiments are finished, the pupil has a very easy duet, then come some interesting selections. This book is so well done and so interesting that we have every confidence in it. It cannot help but find a place in the teaching world. The volume will be quite small and inexpensive. We will be able to furnish the advance copies to teachers at 30 cents, postpaid.

Little Folks' Music Story Book
By James Francis Cooke

The complete text of this book is now at the printer's being set up. The task of selecting the illustrations (which will be printed on separate sheets to be cut out by the pupil and pasted in the book) is now proceeding. The design of this book is to provide the very little music pupil with musical fun and instruction for a whole year. The stories of the lives of the composers are told in child language (not baby-talk). There is just enough in one chapter for one club meeting or lesson. The publication will now be hurried as much as possible. The advance of publication price is 50 cents, postpaid.

What to Play and What to Teach
By Harriette Brower

The author of this book has just returned the corrected proofs and the work may be expected on the music counters soon. The first to receive copies, however, are those who have sent in for the work at the special advance introductory rate. Miss Brower, a teacher and critic of years of experience, has told what pieces are being used with greatest success in this day by the great artists and by practical teachers. The range runs from ancient works to the most modern works, although very few proprietary numbers have been permitted. The pieces are discussed arranged as programs. Teachers will seize upon this work in their search for standard and new material. The advance of publication price is 75 cents a copy, postpaid.

Dawn of Spring
Two-Part Cantata For Treble Voices
Music by Richard Kountz

At this season of the year it is necessary to prepare for Spring entertainments, and we are glad to offer this cantata for use in the grades, or, since it is a serious work, we would suggest that some women's clubs will be glad to use it in their programs because of its exquisite and charming beauty of melody. It is the story of Nature as expressed in Spring, and it follows a day in Spring from dawn through the coming night until after the rising of the sun. The time required for rendition is 25 minutes. Our advance of publication price for one copy only is 30 cents, postpaid.

Notturno, a Musical Romance
By Carl Schmidt

Romance and music seem intertwined, and it is to be regretted that we have so few good musical novels. Several excellent novelists have attempted books of this kind, but most of their efforts have resulted in a work of fiction with little real musical value. This story, written by a well-known New York music-teacher, has both literary charm and musical verity. Christmas is coming and there is always a demand for musical fiction, literature, etc., as holiday gifts to musical friends. Place your advance order now and get the first copies of this new edition when it comes from the press. The advance of publication price is only 80 cents, postpaid.

Barbarossa of Barbary
A Musical Comedy in Two Acts
Music by David Britton

The comedy which runs all through this musical play is of that bright, sparkling sort which appeals to the modern audience. Miss Frances Bennett has given us some very amusing situations in the book and the dialogue is decidedly snappy. The music is full of color but not too difficult for the average amateur organization to make very successful in production. The range of voices is not extreme. All costumes are fully described in the Stage Manager's Guide, wherein may be found drawings of all the principals in costume. The scene of the play is in Algeria, and of course, this permits of Oriental coloring as contrasted with certain American and other foreign uniforms. The play requires an entire evening for performance.

The stage setting is very easily accomplished, and the entire expense may be reduced to a minimum, or it may be as elaborate as desired. Catchy music, bright dialogue, funny situations and a happy ending afford a most enjoyable evening's entertainment. Any number of people may be used in the chorus. Our advance of publication price for one copy only is 40 cents, postpaid.

Musical Moments For the Pianoforte
By Mrs. H. B. Hudson

Mrs. H. B. Hudson, through the various successful numbers of her *A-B-C Series for the Pianoforte*, has become identified with this particular style of writing, but her new book, *Musical Moments*, is in the regular musical notation. Mrs. Hudson is, herself, a very busy and successful teacher. Her specialty is work with young students. In the new book, *Musical Moments*, she has compiled a very useful collection of first grade recreation pieces. Some of these are arrangements of familiar melodies, others are adaptations, but many of them are entirely original. All are carefully prepared and arranged in progressive order. This little volume might be used to supplement any instruction book.

The special introductory price in advance of publication is 35 cents per copy, postpaid.

Withdrawals from Advance of Publication Offers

There are six works that have been offered at low prices in advance of publication for past months. They are now ready. The low introductory prices offered to advance subscribers on these works are now withdrawn, and the normal selling prices apply.

The withdrawals are:

The Awakening, Christmas Cantata for Treble Voices by William Baines. This is a very attractive short cantata that will require about 30 minutes to render. The chorus work is two-part writing and is equally suitable for choirs of girls or women's voices, or for junior choirs. The several solos for soprano and alto voices may be done in unison if no soloists are available. Choristers short on good male voices can contribute effectively to a Christmas musical service with this cantata. Price, 50 cents.

The Promised Child, A Choral Cantata for Christmas by R. M. Stults. Mr. Stults is one of the most successful writers of attractive and appropriate numbers that can be sung with ease and effectiveness by the average choir. This cantata not only has some excellent chorus work for mixed voices, opportunities are also given for using a women's quartet or chorus and a men's quartet or chorus. Each solo voice is brought into use and the organ preludes and accompaniments give the organist satisfying work. The time of performance is about 35 to 40 minutes. The price for the vocal score is 60 cents, and copies of the words only may be secured at $2.00 per hundred.

Comprehensive Music Writing Book by Anna Heuermann Hamilton. This writing book has individual points that recommend it immediately. It not only covers notation, but other important rudimentary branches are treated and teachers will find students helped considerably in the understanding of music in the elementary stages when a writing book such as this is used. The price of this book is 60 cents.

Principles of Expression in Pianoforte Playing by A. F. Christiani. Our new edition of this excellent book on the art of piano playing is now ready. Anyone who has not read this book and is interested in pianoforte playing, whether teacher, student or professional will find it most profitable to read. Our price for this is $2.50.

Studies for the Violin by Fiorillo. There is no need to enlarge upon the excellence and use of these studies, as they are well-known to teachers of the violin. This new edition has been edited very carefully by an authority on violin teaching and we feel that violin instructors will be repaid for requesting the new edition of these studies in the *Presser collection.* The price of this book is $1.00.

Fairies' Revelry by Richard Kieserling. Operatic Cantata for Soprano Solo and Three Part Treble Voices. May be used for concert or stage presentation. It is a summer-night fantasy and would require about 30 minutes to render. This would make an excellent feature number upon the program of any chorus of girls' or young ladies' voices. The price is 60 cents a copy.

Premiums as Christmas Gifts

If you have made up the list of gifts which you intend for your intimate friends this Christmas and are wondering how much strain the purse strings will bear, you can go the limit in giving without one penny of cash outlay. The Etude Music Magazine offers splendid, standard merchandise, useful, ornamental and attractive, for new subscriptions. It takes little effort to interest music lovers in our premier musical journal and you are doing a decidedly good piece of missionary work in spreading Etude influence for the good of music in your community, at the same time collecting enough subscriptions to pay for all the gifts which you may wish to make.

The Premium Catalog

is now ready and a postcard will bring you a copy. All merchandise shown in the catalog is offered to our premium-worker friends without one penny profit to this department.

Beware of Swindlers

Do not pay money for magazines to strangers, no matter how plausible their story may be. Complaints come in daily from our music-loving friends who have been swindled by dishonest persons. If you think the canvasser is sincere, tell him you will send the money to us direct and we will give him credit if he is entitled to it.

Magazine Catalog

The new catalog is now ready showing combinations of the best magazines with Etude. Drop us a postcard and we will be glad to send you a copy showing how you can save money by ordering two or more magazines.

Magazine Subscriptions As Christmas Gifts

You cannot find a more desirable nor a more economical Christmas gift than a year's subscription for a high-class magazine. Everyone interested in music prizes a subscription to Etude. The following is a list of the pick of the magazine field clubbed with an ETUDE MUSIC MAGAZINE subscription at a decided reduction in price. If you wish you can order a club or combination and have the magazines sent to different addresses, enabling you to make the saving.

If you will advise us that the Magazines are holiday gifts, we will send to your friends, attractive gift cards that the magazine comes with your holiday greeting. December is the rush month in the magazine business, so let your orders come early and we will see that they are registered. Subscriptions need not begin until Christmas. A magazine subscription as a gift is a permanent reminder throughout the year of your thoughtfulness.

JUNIOR ETUDE

CONDUCTED BY ELIZABETH A. GEST

Musical Terms (No. 11)

(If you have forgotten to copy any of these lists in your note-book, look them up in your back numbers.)

Portamento—(in reference to violin and voice) a smooth gliding from one tone to another; (in reference to piano playing) semi-staccato.

Polyphonic—a style of writing in which two or more independent parts are carried simultaneously.

Prelude—a composition introductory to a larger composition.

Presto—fast.

Prestissimo—extremely fast.

Primo—first.

Quasi—as if, like.

Quartet—a composition for four instruments or four voices.

Quintet—a composition for five instruments or voices.

My Ambling Fingers

My fingers are like little gnomes,
Upon a walk they're starting.
They amble over all the keys
With ne'er a thought of parting.

They amble up, they amble down,
They amble to and fro;
But always where one may start
The others surely go.

They amble up, they amble down,
They amble where they will.
Like walking on a sunny day
They're never keeping still.

And when they amble on the keys
They make such pretty sounds,
Like footsteps of the fairy gnomes
Who amble on the ground.

Letter Box

EAR JUNIOR ETUDE:
I thought I would write you tonight be-
tuse I have just been reading some of the
tters in the last edition and I enjoyed them
ery much. I would like to tell you some-
ting about my music. I study with a promi-
nt pianist of New York. I have studied
ith him for three years and have accom-
ished what otherwise I might not have
complished in five. I have never known
m to lose his patience. I got my founda-
on with a very good teacher. I am getting
ady now for a recital which I will give in
y teacher's studio. I am practicing three
urs a day along with my school work. I
joy THE ETUDE very much and often read
e lovely pieces in it. I have told all my
iends about you and I know they, too, will
bscribe for you.

From your friend,
SALLY CASKIN (Age 13),
Pa.

EAR JUNIOR ETUDE:
I am thirteen years old and can play fifth
ade piano pieces. I live in a small saw-
ill town in Alabama. I am pianist for our
nior Missionary Society and have also
ayed for our "League" and for the Literary
ub.

From your friend,
RUTH EVANS (Age 13),
Alabama.

AR JUNIOR ETUDE:
I enjoy THE ETUDE very much and read
the letters, but have never seen any from
rth Dakota. I like to play the piano, and
play fifth grade music. In the winter time
is very cold here and we have fun playing
the snow, but when it comes time for
ring and all the birds are singing and the
wers are in bloom, I like that season better.

From your friend,
JUNE KREMER (Age 11).
North Dakota.

The Neglected Piano

By Marion Benson Matthews

It seemed to Beth, as she sat by the window in the twilight, that a sigh came floating across the room from the direction of the piano.

She had quite forgotten about it when, a few moments later, there came another sigh, longer and more doleful than the first.

"Dear me!" she exclaimed. "I could almost declare that the piano itself was sighing!"

"I *was* sighing," said the piano.

"I was sighing", said the piano.

"Why—why—what—" stammered Beth.

"Don't be alarmed," continued the piano. "If you will only allow me to tell you the reason for my sadness, it may prove to be of help to both of us. At least, it will cheer me up somewhat to express myself. It's really getting on my nerves, having to keep silent so long. Do you mind if I talk?"

"Indeed I don't mind," said Beth. "I am curious to hear the reason for your sighs."

"Neglect, that's what it is,—neglect," repeated the piano. "Here I have stood nearly all summer, without making a sound. You have been so busy, since vacation began, with your picnics and tennis, your boating and swimming, that you've found no time for *me*. Ah! How different things were before your sister went away! She always found a few minutes, in the evening, to sit down at my keyboard and play some of the tunes I love."

The piano began another loud sigh, and Beth spoke hurriedly to prevent its finish.

"I shall begin my lessons again very soon, you know," she said. "Then you will not feel lonesome."

"Lessons are all very well," rejoined the piano. "Of course you couldn't play without lessons; but how I should like to be played again by some one who played for sheer enjoyment—not because she felt *obliged* to play. And besides, don't you know it is bad for a piano to stand idle all summer, closed and silent?"

"I'm truly sorry," said Beth, "and if it will make you feel happier, I will play some tunes this very evening."

"Thank you!" said the piano, more cheerfully. "And don't forget to play my favorites—the old folk-songs."

Mary Elizabeth's Kittens

By D. G. Holman

Imagine having ten little kittens! And every one of them coal black! That's what Mary Elizabeth had and they were so cunning with their little blue eyes and little pink tongues.

Of course they grew and learned to follow their mistress everywhere; but they remembered that their nice warm bed was in the wood-shed back of the kitchen. Mary Elizabeth would give them their supper in the kitchen and then open the door and say, "Run, kitties, run," and away they would go straight for the wood-shed.

The novelty of having ten black kittens wore off, and Mary Elizabeth was able to put some attention where it belonged; but, even so, her music lessons were worse and worse. When Miss Stone questioned her about her practice time Mary Elizabeth said, "But, Miss Stone, I practice forty-five minutes every day, and lots of the other girls do only a half hour."

The next day Miss Stone called upon Mrs. Brown during Mary Elizabeth's practice period.

"Mrs. Brown, Mary Elizabeth is not practicing as she should. Please let me sit here and listen to her a couple of minutes, and maybe I can find the trouble."

It was certainly Noise that was coming from the music room. No one could call it music, and it stopped promptly on the stroke of the clock. The little girl was much surprised to see Miss Stone.

"Oh, Miss Stone, don't you want to see my kittens?"

The kittens were certainly pretty and their mistress explained that every single one of the ten knew the way to bed and she did not have to take them.

"Every one of them can think. Isn't that nice?"

Miss Stone agreed that it was very nice, indeed.

The next day was music lesson day. "Mary Elizabeth, you have not been practicing. It is true that you spend some time pounding the piano, but you do not *think* about what you are doing. How many fingers have you?"

"Ten."

"How many kittens have you?"

"Ten."

"Did you get your fingers mixed up with your kittens?"

"Why—why? No, of course not. What do you mean, Miss Stone?"

"Well, you open the door for your kittens and turn them out to go to the right place. Your lessons sound as if you opened the music, said, 'Go on and play, fingers,' and your mind went skating and left the fingers to wiggle as best they could. Now each little kitten knows where he wants to go and you do not have to go along to tell him, but your fingers need a guide. They cannot read the music. Your mind is guide and has to do that. It sends the directions to the fingers by means of wonderful telegraph wires called nerves. Unless your mind attends to its work and tells each finger what to play and when and how to play it, you will never be able to truthfully say you have practiced; and, what is worse, you will never play as well as the other girls."

Miss Stone paused for this to sink in and then started the lesson again.

"Begin the etude, Mary Elizabeth, and if I say 'Kitty, kitty,' you will know that you are again treating your fingers as if they are little cats. You ought not to impose upon them that way."

But Mary Elizabeth played better, and her teacher never had to say "Kitty, kitty," once.

There once was a nice little boy
Whose playing was really a joy;
He practiced each day
What his teacher would say,
And ne'er a mistake would annoy.

Anton Rubinstein

Born, Vichvatinets, 1829. Died, Peterhof, 1894

A pianist second only to Liszt, his playing being noted for fire and impetuosity. Founder of the Imperial Conservatory of Music at Petrograd. The *Ocean Symphony* and *Piano Concertos in D-Minor* and in *G* are his best known compositions in large form.

JUNIOR ETUDE—Continued

Junior Etude Contest

THE JUNIOR ETUDE will award three pretty prizes each month for the best and neatest original essay or story and answers to puzzles.

Subject for essay or story this month, "Music in America." Must contain not over one hundred and fifty words. Any boy or girl may compete whether a subscriber or not.

All contributions must be received at the JUNIOR ETUDE Office, 1712 Chestnut St., Philadelphia, Pa., before November 20, 1924. Names of prize-winners and their contributions will be published in the February, 1925, issue.

Put your name and age on upper left corner of paper, and address on upper right corner of paper. If your contribution takes more than one sheet of paper do this on each sheet.

Do not use typewriters.

Competitors who do not comply with ALL of the above conditions will not be considered.

(When schools or clubs are competing, please have a preliminary contest first, and send only the five best to the JUNIOR ETUDE contest.)

Honorable Mention for Essays in May Contest

Doris M. Evans, Bunos McGuffin, Loraine Fleishmann, Velma M. Donaldson, Elizabeth Wittig, Edmund Lukaszewski, Grace Herbert, Mary A. Muntz, Virginia C. Lupton, Frances E. Metz, Alberta Hays, Louise Neptray, Dorothea Johnston, Lucille Rapillard, Dolly Anderson, Nina Holhne, Mary Crouser, Frances Fusfeld, Hazel Benedict, Catherine Hennesy, Adele DeEtte Hoover, Nellie Lang, Violet May Heide, Helen O'Neill, Faye Wagner, Glenda Briner, Charlotte Silvey, Mary Eileen

MELODY
(Prize Winner)

Melody speaks to the imagination in a language peculiar to itself. Sometimes music is so expressed that it stands out in clear light and needs no coloring to make it apparent. Other times it may be expressed so that an accompaniment is necessary to set it off and bring out its full meaning. Melody comes directly from the feelings and emotions, rather than from complicated harmony which demands more thought and reflection. Thus, melody is easier to grasp, and that is why we hum a tune rather than an accompaniment. It also explains the Greek's long period of acquaintance with only melody. Old time honored melodies are entwined with our earliest recoltions, being associated in our minds with thoughts of home and happiness. They appeal strongly to our minds because we can understand them.

MARIE HOUSEL (Age 14), N. J.

MELODY
(Prize Winner)

A melody is the arrangement of different musical sounds for a single voice or instrument. The music of long ago consisted entirely of melody, that is, tunes which are usually very simple and have only one note sounded at a time. There are many types of melodies; some that bring pictures of spring and some that bring pictures of storms, and some that bring recollections of other days. Doubtless the most spontaneous outburst of song is found in the plantation melodies of the American negroes. Their ear for music is so true that they can form, without a moment's hesitation, correct harmonies for almost any melody, and they do this naturally, without training.

SARAH ELIZABETH JENKINS (Aged 12), N. C.

MELODY
(Prize Winner)

Melody is the product of inspiration which comes from a number of sources. One source might be dreams, for I have read of a composer who discovered many melodies in his dreams and wrote them down on awaking. Another might be concentration, for a composer might try to get a melody for a certain part of a composition and after many hours of thinking he would find one that would suit him. Another source is merely by accident. Mr. Drdla says that he discovered his famous "Souvenir," while riding on a trolley car and had nothing to write it on but his transfer. These are only a few of the ways in which beautiful melody comes into existence.

G. FRANCES LUPEEN (Age 15), N. Y.

Puzzle Corner

By Pauline Leeman

In each of the following sentences there is hidden a composer.

1 Maud Miller on a summer's day,
Raked the meadow, sweet with hay.
Deny it not, O reader.

2 The bell in Ivy Towers rings the knell of passing day.

3 The Mother of Charlie Ross in idle dreams still sees him.

4 We berate our neighbors but excuse ourselves.

5 How frequently we find the cherub in ideal art.

6 If he asks your hand, Elsa, do not say nay.

7 Be brief, Lo, towards life's setting sun man hastens.

8 You have dropped a beet. Ho, vender, here it is.

9 The dog spies a cat and it makes his tail wag nervously.

10 My chop I never like to eat with peas.

11 You have found an egg, lucky boy.

12 Liz still improves from day to day.

(Answers will appear in February, 1925, issue.)

Answer to May Puzzle

13, 14, 8, SON. 9, 10, 7, 6, DEEM. 11, 14, 12, 13, LOSS. 16, 7, 10, 9, 3, 2, NEEDLE. 1, 4, 5, FIX. 1, 3, 2, 10, FLEE. 12, 15, 7, 9, SHED. Composer, Felix Mendelssohn.

Prize Winners

Margaret Walters, (Age 12), California.
William F. Potter (Age 13), Massachusetts.
Roland Forest (Age 12), Canada.

Honorable Mention for Puzzles in May Issue

L. Rousseau, Arthur Boyer, Esten Matheson, Robert Ellis, Virginia Smith, Fred Hawkins, David Turner, Emily Randolph, Emily Swanson, Audrey Fannin, Margarte Way, Jack Alman, Florence Schack, Mary Comerford, Mary O'Brien, James J. Lynch, M. K. Domville, Marian Welch, Maxine Hopkins, Anna Coulombe, Julienne Poincen, Mary Lewis, Esther Rabinowitz, Georgette Wilson, Charles Schurmann, Geraldine Cate, William Grant, Lucile Lowe, Dorothy Marengo, Ethel Lehy, Marian Stamp, Harriet Delevig, Ruth Wade, Freddie G. Jones, Ralph Hallenbeck, Mary Elizabeth Doherty, Nathan Price, Roslyn Roth, Eli Elizabeth Plummer, Mary Frances Berghaus, Maxine Meyers, Frank Gaither, Helen Modson, Pauline Olmstead, Celia Kartzinell, Hazel Scott, Freda Shaw, Violet Mae Heide, Eleanor Query, Evelyn Byrn, Edith Gloves, Leo Ray, Alfred Landry, Rose Cohen, Elizabeth Vassil, Betty Sullivan, Yvonne M. Fievet, Dorothy Thington, Frances V. Brown, Ida Margoles, Dorothy Ashe, Clara, Agnes Jarka, Eleanor Feigert, Dorothy Nash, Lucienne Dessosiers, Laurence Quill, Grace Levenhaupt, Anna Brunswick, Maida Child, Mary Higbee, Jessie Holman, Ruth E. Price, Adele De Ette Hoover, Aileen Graham, Doris Thoresen, Jean Morgan, Margaret Cronin, Josephine McVey, Helen Garth, James Gerend, Ernestine Buck, Irene Zebawa, Dorothy Craft, Evelyn Hill, Evelyn Laver, Marian Porter, Doris Evans, Ruth Lebos, Inez Helen Christianson, Evelyn Omwake, Helen Ashemberg, Winnie Hartwell, Paul Chouinard, Cathryn Janssen, Marjorie Maddox, Cecelia Maddox, Dorothy Oliver, Gretchen Kohler, G. Floriene Goldeen, Martha Smith, Hariette Kohler, Marie Wallin, Frances Pease.

This list could have been extended to include many other answers nearly as neat, but space does not permit. Again, as is always the case, some do not follow all of the rules, and of course can not be counted. And do not forget that what is a good, neat paper for anyone aged eleven or twelve is quite inexcusable for one aged fourteen or fifteen. A good many of the papers from writers of fourteen or fifteen years look as though they came from the kindergarten; and then the senders wonder why they did not receive honorable mention at least, if not a prize.

DEAR JUNIOR ETUDE:

I've taken music lessons for three years. I hated my exercise book and despised scales and arpeggios. I wanted to play pieces only and never bother with scales.

Then one day my teacher left town and I refused to take another teacher. I had my own way then. I played all the pretty pieces I thought of and never bothered with scales.

It is now almost two years since I've had any lessons and I've come to realize that my daily practice has not done me any good. Why? I've got to admit it; it is because I've done without scales, arpeggios, and exercises. My fingers have grown stiff and numb and refuse to run up and down octaves to play decent "glissando," which is due to lack of exercise. I've taken up again with my scales, but I find it harder than ever. I hope to master them, though.

I hope the JUNIOR friends who read this and are tempted to go without scales and exercises will realize what a mistake they'd make, as they are most essential.

From your friend,
R. LESLIE MEURICE (Age 15),
Can.

The World of Music

Donizetti's Birthplace in Bergamo, Italy, is to be purchased and converted into a public property, as a memorial to the composer of "Lucia di Lammermoor."

A "Temple of Music," consisting of a music stand of white marble in Grecian design, seating a large band or orchestra and a chorus of three hundred, with an amphitheatre seating twenty-five thousand persons, was dedicated on September 21, in Roger Williams Park, Providence, R. I. It was bequeathed to the city by William Curtis Benedict; and the building will be known as the "Benedict Monument to Music."

Jenny Dufau, coloratura soprano, who for several seasons was a leading figure in the Chicago Opera Company, died August 29, at her home in Pau, France. She was a native of Rothau, Alsace; and Etelka Gerster and Marchesi had been her leading teachers. Before coming to Chicago she had sung in many leading opera houses of Europe.

The Semi-Centennial of the Paris Opera, generally conceded to be the most beautiful piece of theatrical architecture in the world, will be celebrated on January 5, next. A feature of the festivities will be recognition of the centenary of the birth of Garnier, the architect of the building. A gala program of music composed between 1830 and 1875, and a performance of Lully's "Triomphe de l'Amour" will mark the event.

"La Mascarade of the Princesses Captives (The Masquerade of the Captive Princesses)," a new ballet by Francesco Malipiero, recently had its premiere at the Théâtre de la Monnaie of Brussels.

Three Daughters of Robert and Clara Schumann are still said to be living. Marie, now eighty-three years of age, lives with her youngest sister Eugénie, aged seventy-three, at Interlaken; while Julie (Frau Sommerhof), at seventy-eight, resides n Holland.

An Organ of 1400 Pipes Made of Cardboard instead of metal is in use in he Church of the Incoronata of Milan. These pipes are said to be wonderfully fashoned, and are made after the ideas of Father Giovanni Crespi Rigghiso, a learned Italian chemist.

Lew Dockstader, one of the most famous of the old-time black-face minstrels, died in New York, October 26th. He was emarkable for his impersonations of prominent figures of the day—such men as Presidents Harrison and Roosevelt—and is said to have been longer before the public and to ave received a larger salary than any other black-face comedian.

The New "Chickering Hall," on West Fifty-seventh Street, New York, was opened o the public on October 8th. It is planned hat this hall shall reclaim the glories of he former halls under this name. The first was completed in 1850, shortly before Jenny Lind made her first historic visit to America. The second, in East Fourteenth Street, was pened in 1860, and the third, in which ractically all famous artists of that period ppeared, was in use from 1875 to 1901.

Serge Koussevitsky, successor of ierre Monteux as conductor of the Boston ymphony Orchestra, made his American début at the concert of October 10. A comletely filled auditorium greeted the newcomer and applauded enthusiastically his ork; while the press of the following morning joined in the favorable reception.

Broadcasting of Copyrighted Musical Compositions, without the owner's onsent, was declared illegal, "Under certain rcumstances," in an opinion of Federal udge Knox handed down in October. Publishers are not yet all agreed as to the advisability of pressing this claim, and The heodore Presser Company, as well as several others, have not thus far restricted the use of their publications for radio purposes.

Olga Sapio, daughter of Clementine De Vere Sapio (who for some years before her arriage to Romualdo Sapio, the operatic nductor who took her to his London home, eld the enviable distinction of being far e highest paid church singer in America), as been achieving reputation as a pianist England.

A Prize of Fifty Thousand Lire ($5,000) is offered by *Il Secolo*, a Milan newspaper, to stimulate the composition of opera. The winning work is to be produced in a leading opera house of Italy.

A Greek Musician Has Ordered an Organ from a German maker, specially constructed for the performance of Greek and Byzantine music. The octaves of this instrument contain forty-two different intervals, each different from the others. These forty-two intervals are probably the seven modes, each in the diatonic, chromatic and enharmonic form of the authentic and plagal modes. On this instrument it will be possible to play the old Greek Hymns of the Middle Ages.

Giacomo Spontini is to have the one-hundred-and-fiftieth anniversary of his birth celebrated on a large scale at his birthplace, Majorana (near Jesi, Marche). A statue of him by Tebaldini was recently unveiled there.

The Brooklyn Institute of Art and Sciences, which has had a most healthful influence in the development of the musical interests of America, is this year celebrating its centennial.

Two American Operas, "Alglala," by Francesco de Leone, and "Snowbird," by Theodore Stearns, are to have a New York presentation, at Carnegie Hall, on December 15, by the English Grand Opera Company, with the composers conducting.

The "Siegfried Chair" from the Villa Wahnfried of Bayreuth, a highly-prized Wagner souvenir, is to be sent to America, to be given as a prize to the person or institution that has done most for the advancement of music and musical education in the United States.

"Thaïs" has had its three hundredth performance recently at the Paris Opéra. Sybil Sanderson created the title rôle at its world premiere at this same historic house in 1894. Mary Garden also won laurels in the same rôle at the same theater.

Six Thousand Musicians are reported to be out of work because of unusual conditions existing now in New York City. Among these are about seventy harpists.

A Sgambati Memorial Tablet has been placed on the house in Rome where the eminent composer lived.

Karl Burrian, one-time famous basso, and the creator of the rôle of *Herod* in Strauss' "Salome" at its world premiere at Dresden in 1905, and two seasons at the Metropolitan of New York, died recently.

The Centenary of the Birth of Anton Bruckner is to be celebrated by the Chicago Symphony Orchestra by including five of his symphonies in the programs of the present season.

May A. Strong, of Evanston, Illinois, has been awarded the One Hundred Dollars W. W. Kimball Company Prize offered by the Chicago Madrigal Club, for her male chorus setting of a poem, "May Comes Laughing," by Henrietta Jewett Keith, of Minneapolis. This is the third time this prize had been won by a woman, Frances McCollin, of Philadelphia having been the recipient in 1918 and 1923.

An American Women's Symphony Orchestra has been organized in New York by Elizabeth Kuyper, the Dutch conductor, pianist and composer. Mme. Kuyper has been the leader of similar organizations in Berlin, The Hague and London. She was the first woman to hold the post of teacher of composition in the Royal College of Music of Berlin.

A Collapsible Violoncello has been invented by Mlle. Adele Clement, an honor pupil of the Paris Conservatoire. Aside from its being foldable in a small space for traveling, it has the additional advantage of not being heard outside the room in which it is played.

Kings, Queens, Princes, Princesses, Dukes, and all members of nobility or aristocracy, must be eliminated from the casts of operas to be given hereafter in Russia, according to a report of a recent ruling of the Soviet.

Orchestral Concerts for the Young Folk are in their third season at Picton Hall, Liverpool, England. Symphony concerts by an orchestra of forty players are given with admission to teachers and scholars at ninepence.

A University of Music and Representative Arts is to be founded in Vienna. Richard Strauss is to be the Honorary Director and leader of the School of Style; Josef Marx will be Active Director and head of the Theory School; and Max Reinhardt will direct the School of Drama.

The Southern Music Supervisors' Association met at Winston-Salem, North Carolina, November 17-21. Leading educators of the South, directed the discussions. The programs of the first day were largely under the direction of the colored schools, the choral concert of the evening having the assistance of Marian Anderson, the phenomenal colored contralto of Philadelphia.

Igor Stravinsky is to appear as guest conductor of the Philadelphia Orchestra on January 23-24, in Leopold Stokowski's absence on his usual mid-winter vacation. He also will probably conduct the same Orchestra for one of its concerts in New York. This is a fitting compliment, as Mr. Stokowski has been one of the leading protagonists of Stravinsky's works.

One Thousand Seven Hundred and One Pipe Organs, with a value of ten millions of dollars, were produced by the factories of America during the last year.

John McCormack gave his first London concert since the war, in Queen's Hall, on October 5th. Apprehension regarding his reception, on account of political friction between Ireland and the British Government, was discovered to be ill-founded.

The Forty-Eight Preludes and Fugues of Bach are soon to appear from the Oxford University Press, edited by D. F. Tovey and fingered by the famous English Bach specialist, Harold Samuel. The work comes out with the approval of the Bach Editorial Committee of the Associated Boards of the Royal Academy of Music and the Royal College of Music.

"Shaun the Post," an Irish opera by H. R. White, was given under the direction of the composer, at the Theatre Royal, Dublin, on August 15th and 16th, and bids well to become a popular success.

Municipal Aid to Music in a more extended form was one of the principal plans launched at the Eleventh Recreation Congress at Atlantic City, October 17-22. Discussions by speakers of national importance furnished a most optimistic outline of the achievements along the line of municipal music.

Mr. Leo Oehmler, the well-known composer, who has been visiting Catalina Island, thirty miles off the California coast, writes that music has become a subject of great interest in this "Paradise of the Pacific." William Wrigley, Jr., the Chicago chewing gum magnate, has bought the island, has erected a beautiful home there, and is said to be greatly interested in the musical interests of this very popular rendezvous of tourists.

Galli-Curci will return from her concert tour of Great Britain to sing with the Metropolitan Company during January and February, after which she will sail for Australia to begin a series of forty concerts about April 1st.

Eugene Ysaye, so well known to American concert audiences as a violinist as well as conductor of the Cincinnati Symphony Orchestra, and who now is residing in Brussels, has completed a set of six sonatas for the violin alone which are said to be of a nature to cause much interest in the violin world.

"Parsifal" has lately been produced on a magnificent scale, and with gratifying success, in the old Roman Arena of Verona, Italy.

The Tailteann Festival, one of the traditional Irish events of this type, going far back into history, has recently been revived with music occupying a prominent place on the programs.

Six Orchestras, but not one playing jazz, is the proud boast of Reeves and Ward Counties, Texas.

DELIGHTFUL COLLECTIONS FOR YOUNG PIANISTS

Regularly Priced at $1.00

Specially Priced for the Gift Season at 60c each

CHILDREN'S RHYMES FROM A TO Z

By M. Greenwald **With Text**

Well-known childhood rhymes delightfully set to music. Twenty-six easy numbers in all—one for each letter of the alphabet.

STORY TIME AND PLAYTIME

By Newton Swift

Twelve fine juvenile pieces for the piano. They are in descriptive vein and about grade 2,

SOUVENIRS OF THE MASTERS

By Geo. L. Spaulding **With Texts**

Imperishable melodies of the great classic and modern masters attractively arranged for pianists in grade two.

TEN FIVE-NOTE RECREATIONS

By C. W. Krogmann **With Text**

Very easy pieces in various rhythms.

PICTURES FROM STORYLAND

By David Dick Slater

An agreeable set of first and early second-grade pieces.

PICTURES FROM FAIRYLAND

By David Dick Slater

Appealing second-grade pieces in characteristic vein.

PICTURES FROM HOLIDAYLAND

By David Dick Slater

Second-grade tone pictures that stimulate the child's imagination.

Holiday Cash Price 40c EACH

CAPTIVATING OFFERINGS FOR LITTLE PIANISTS

Regularly Priced at 60 cents

Specially Priced at 40 cents each

CHILD'S FIRST BOOK OF MELODIES

By W. E. Honska **With Text**

A little work that aids young pianists to feel the idea of rhythm, harmony and form.

THE LITTLE ARTIST

By Frances Terry

Five characteristic first-grade pieces.

TINY TUNES FOR TINY TOTS

By A. Scarmolin

Five charming numbers for young students. They are developed along polyphonic lines.

PICTURES FROM NATURE

By Mae Aileen Erb **With Verses**

Characteristic first-grade pieces with bright verses adding charm to the melodies.

OLD RHYMES WITH NEW TUNES

By Geo. F. Hamer **With Verses**

One of the best sets of "Mother Goose" melodies.

Little Volumes for Young Pianists

Regularly Priced at 75c Each

Young Folk Studying Music Will Be Encouraged By Some Musical Gift at Christmas

Holiday Cash Price EACH 50c

These in the First Column Are Very Easy—The Second Column Presents Attractive Volumes of 1st and 2nd Grades

NEW RHYMES AND TUNES

By Helen L. Cramm **With Verses**

Extremely pleasing little pieces for beginners that at the same time are helpful and instructive.

UNDER THE CHRISTMAS TREE

By Mildred Weston **With Text**

Clever little "Christmassy" numbers for young beginners to play and sing.

RHYMING TUNES FOR LITTLE PLAYERS

By Hannah Smith **With Text**

Another favorite collection for little players. These melodic numbers please.

PLEASANT PASTIMES

By H. L. Cramm **With Words**

A captivating recreation book for beginners.

TUNES AND RHYMES

By Geo. L. Spaulding **With Text**

Bright, pleasing, genuine first-grade pieces.

TONE STORIES FOR BOYS AND GIRLS

By Daniel Rowe **With Text**

An admirable combination of words and music to delight little pianists.

WOODSY CORNER TALES AND TUNES

By Helen L. Cramm **With Stories**

Twelve little stories and twelve little piano solos that have an irresistible appeal.

MUSICAL PICTURE BOOK

By Octavia Hudson **With Verses**

Short, tuneful pieces with text ad. lib.

TWENTY-FIVE MELODIES FOR JUVENILES

By Mana-Zucca **With Texts**

Begins with the easiest kind of a piece and progresses nicely into more pretentious numbers for the embryo pianist.

VERY FIRST PIECES

An excellent collection of 29 easy pieces.

VERY FIRST DUET BOOK

Piano duets in first and second grades.

MERRY RHYMES FOR CHILDHOOD TIMES

By L. A. Bugbee **With Words**

Tuneful, first-grade pieces for small hands.

SUNNY DAY SONGS

By H. L. Cramm **With Verses**

A dozen and one bright, easy pieces.

BIRTHDAY JEWELS

By Geo. L. Spaulding **With Text**

A collection of little pieces with verses appropriate to the birthstone of each month.

MELODIES OF THE PAST

By M. Greenwald **With Text**

Good old tunes with interesting variations. All are easy to play.

TOY SHOP SKETCHES

By James H. Rogers

Tuneful melodies presented in an attractive form, margined with illustrations.

CHILD'S PLAY

By Geo. Tompkins **With Text**

Ten miniatures. First and second-grade pieces with accompanying texts.

STANDARD FIRST PIECES

Seventy-two first and second-grade pieces.

STANDARD ELEMENTARY ALBUM

Eighty-two pleasing, easy piano pieces.

YOUNG PLAYERS' ALBUM

Seventy melodious pieces in second and third grades.

SPAULDING EASY ALBUM

George L. Spaulding's melodious pieces inspire young pupils to renewed efforts.

STORIES NOTES CAN TELL

By Frances Terry

Six charming second-grade pieces.

YOUNG FOLKS' OPERA GEMS

A worth-while collection of 27 operatic airs arranged for pianists having about two years of study.

MUSICAL GAMES

Entertaining and at the same time instructive. Students of all ages will enjoy many of these musical games.

Allegrando—

Holiday Cash Price, 45 cents

A game that teaches the value of notes, rests, names of notes, keys and time values.

Court of Music—

Holiday Cash Price, 45 cents

Excellent for musical card parties, sociables, etc. All the regular card games may be played with these cards. In place of hearts, diamonds, clubs and spades, the different suits are indicated by sharps, flats, notes and rests.

Great Composers—

Holiday Cash Price, 45 cents

Can be played like the well-known literature game "Authors." It is an instructive game, familiarizing players with the birth and death dates of famous composers, and also four of the greatest works of each. Quite a few may play.

Musical Authors—

Holiday Cash Price, 45 cents

A game consisting of 50 cards each, containing 10 questions in the biography of some one important composer. In playing this game one learns the answers to 500 interesting questions on great composers.

Scherzando—

Holiday Cash Price, 45 cents

Excellent for beginners to learn notation and time signatures in an entertaining manner. Plays somewhat similar to the well-kown game of "Authors."

Triads or Chords—

Holiday Cash Price, 25 cents

Helps pupils, through a pleasing medium, to a mastery of the common chords used in music, the various keys and their signatures.

Musical Casino—

Holiday Cash Price, 45 cents

Plays somewhat similar to the regular card game of casino, but the matching, pairing, etc., are accomplished by means of major and minor intervals and common chords. A game that sharpens one's recognition of intervals and chords and adds to a general knowledge of elementary theory.

Musical Dominoes—.

Holiday Cash Price, 75 cents

All the various games of dominoes can be played with these dominoes, using notes and rest values. Full directions. Nicely boxed. Excellent and pleasurable drill in note and rest values.

Musical Euchre—

Holiday Cash Price, 45 cents

Uses orchestral instruments for names of the various suits instead of clubs, hearts, etc. Plays similar to the regular card game of euchre.

Elementaire—

Holiday Cash Price, 45 cents

By pleasing pastime teaches rudiments of music. Two sets of cards are supplied and can be played as either one or two separate games—one teaching the lines and spaces, and the other the major and minor chords and their signatures.

GAMES AND PUZZLES FOR THE MUSICAL

By Daniel Bloomfield

Special Holiday Cash Price, 45 cents

An interesting little volume of games and puzzles for music lovers, music clubs and classes. Adults as well as young students will enjoy many of these entertaining and instructive games and puzzles.

Special Low Prices for Christmas Shoppers

By Thos. Tapper Regular Price, $1.75
Holiday Cash Price, $1.20, Postpaid

For foundation study in musical history this book is the best obtainable. A very appropriate gift for an ambitious young student. Cloth bound.

MUSIC TALKS WITH CHILDREN

By Thomas Tapper Regular Price, $1.50
Holiday Cash Price, $1.10, Postpaid

A remarkably fine book of interesting music "talks" for teachers or parents to read verbatim to child music students. Cloth bound.

MUSICAL PLAYLETS FOR YOUNG PEOPLE

By James Francis Cooke Price, 60 cents
Holiday Cash Price, 45 cents, Postpaid

THE ETUDE

DECEMBER, 1924 Single Copies 25 Cents VOL. XLII, No. 12

Musical Antiques

We were standing at the gate of a wayside dealer in antiques, in Maine. There was little probability that the dealer was a cheat. He was not the kind of bucolic highwayman who spends part of his time concocting "near-Colonial" furniture in the barn and the rest of his day disdainfully parting with family heirlooms in the parlor. No, here was a dealer with real antiques. There could be no question about it. They were too hideously ugly for any manufacturer in these *Ladies' Home Journal-House Beautiful-Pictorial Review-Country Gentleman*-days to foist upon the American public. But there are thousands of antique-mad pepole who will buy anything, if guaranteed to come from a period when their own ancestry was obscured in the stream of European immigration which began with the Mayflower.

We saw one very conspicuous female from the Bronx buy a "real Colonial" rug which would have made a cultured Chinaman weep. We saw the pious descendant of a Maine farmer part with a chair that her grandmother wouldn't have given kitchen room. The price paid would have furnished the entire home of John Alden and Priscilla Mullen.

Antiquity is a fetich with many people. Age means nothing except with old violins, old wine and old wives. In music we know of innumerable things that are revered for their age that are by no means exceptional as art works. It is no heresy to point out that many of the masters, including some of the greatest, could be insufferably dull, prolix and even almost trite at times.

Why perpetuate the bad taste of some of our forebears? If they bought things indicating that they possessed the germs of culture they deserve our respect and admiration. There are thousands of home-made Colonial antiques that have this elemental beauty. Others are merely ridiculous. In the modern parlor they stand in hideous contrast to the best products of the Grand Rapids furniture factories. People who buy such atrocities may possibly be followed a hundred years hence by a similar brood who will purchase our present day lawn mowers and sewing machines as antiques.

It is wise for the teacher to bring up the child with a reverence for the great classics; but at the same time the teacher should know the classics and should read the opinions of great critics about the classics so that an intelligent judgment may select which are really worth while. Many a teacher has given the child musical antiques that even the composer himself in this day would hardly greet with enthusiasm. Many a master has produced works, while under the influence of a few Homeric nods, that, were he still living, he would like to see obliterated. Yet music of this kind is doled out to pupils as immortal masterpieces, merely because it is "antique." Why not teach our young folks to accept music for its intrinsic beauty, not for its longevity?

Stop To-day

Many musicians and music teachers belie their profession and spend no little part of their time in fruitless worry. Music, of all arts, should keep them from this form of non-constructive nonsense.

So many people confound worry with concern, or interest, or earnestness. It is none of these. Worry is a form of fear, of apprehension, of nervous anticipation of some terrible thing that may happen. The musician worries because he fears that the public may not like his playing. Suppose it does not! Worry will not help the situation. Earnest work and more preparation might. Worry and fear are the thieves of success. They unfit one for the real battle, by undermining those forces which one must have at command when the great issue comes.

Arnold Bennett, the famous English novelist, represents worry thus: "Worry is the evidence of an ill-controlled brain; it is merely a stupid waste of time in unpleasantness. If men and women practiced mental calisthenics, they would purge their brains of this foolishness."

Making Others Happy

"Ty" Cobb, who, the "fans" tell us, is one of the greatest of all baseball players and managers, is recently quoted: "If I had my time over again, I would probably be a surgeon instead of a baseball player. I have only one regret, I shall not have done any real good to humanity when I retire."

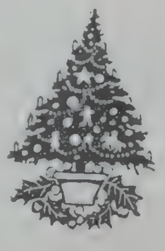
We think that "Ty," in the vernacular of the ball-park, is "off his base." This notable player has given pleasure and recreation to thousands and thousands of high-tension men who depend upon baseball as a diversion, and for a "let-up" from the grind that otherwise might shorten their lives on earth. In doing this, "Ty" has made good. Many of the surgeons he admires would not hesitate to give "Ty" a degree of "Doctor of Psycho-therapy," or "Doctor of Sunshine and Happiness," because he has probably done more for tired brains, tired bodies and tired nerves than thousands of doctors.

If "Ty" is right, all of the efforts of interpretative musicians are wasted. Their productions are just as temporal as those of "Ty." When the playing or the singing is done, all that is left is a beautiful memory unless the artist has recorded his art for some reproducing machine. These memories are treasures to those who know that their journey through life is—so far as we know—onefold. Who would give up the glorious recollections of Caruso, Busoni, Bispham, Williams? No, "Ty," the man who gives the world something to rest its mind and its soul, is not living a wasted life. You have every reason to be glad in your heart that you have had the chance to make so many others happy.

Christmastide brings no finer gift than the chance to make others happy.

Christmas Glorious!

Over a hundred million Americans will shout "Merry Christmas" again this year. The echo will ring back from multitudes in foreign climes to whom this Christmas Glorious will be one of the merriest, happiest, gladdest in their lives. Just now it is a joy to realize that we are blessed with thousands of musical friends the world over. We want them to know that our Christmas Greetings in cold print carry with them the warmest kind of a Christmas Greeting in our hearts.



Higher Character and Business Standards

Much to the credit of a group of leading American vocalists is a "Code of Ethics and Practice" we have recently received from the American Academy of Teachers of Singing of New York City. It would be a fortunate thing if these principles could be adopted by music teachers in general.

Preamble

We, members of The American Academy of Teachers of Singing, citizens of the United States, dedicate this code of ethics to the advancement of vocal art.

We pledge ourselves in our professional activities to the vital principle underlying all enduring accomplishment; in defending our own rights never to be unmindful of the rights of others.

Code

Article 1: Members of the Academy, in accordance with Article 2 of the Constituiton, agree to further: (1) the establishment of a code which will improve the ethical principles and practice of the profession; (2) the spreading of knowledge and culture; and (3) the promotion of coöperation and good fellowship.

Article 2: Members of the Academy assume the obligation to promote the teaching of singing, not primarily as a commercial project, but as a means of culture; to maintain and increase the prestige of the art of singing; and to conform to the standards of correct professional conduct as instructors, advisers, and gentlemen.

Article 3: The teacher of singing should possess both character and education.

Article 4: Any unprofessional, dishonest, or corrupt conduct on the part of teacher or pupil should be reported to the Academy.

Article 5: Any pupil who has deliberately failed to pay his just indebtedness shall be reported to the Academy, and shall not be accepted as a pupil by any other member until his debt is paid.

Article 6: Any specific promise by the teacher that leads the student to false hopes of a career is a breach of ethics and integrity.

Article 7: A minimum of one year of continuous instruction shall warrant the teacher in claiming the student as a pupil. But fairness must be practiced in the proper recognition of helpful services rendered by former teachers, and derogatory statements avoided. Furthermore, dignity and a scrupulous adherence to facts in advertising shall always be observed.

Article 8: Teachers should treat their pupils with consideration and patience, inculcating in them respect for their art.

Article 9: In voice trials the duty of the teacher is to diagnose the case impartially. Therefore it is suggested that at the outset the student be requested not to disclose the name of any former teacher. In all instances an honest opinion should be given the student.

Article 10: Punctuality is incumbent upon teacher and pupil. Pupils should be held responsible for the time originally reserved, except in rare emergency.

The members supporting these principles include:—

Walter L. Bogert
William S. Brady
Dudley Buck
Harold L. Butler
Charles W. Clark
D. A. Clippinger
Nicholas Douty
George Fergusson
Yeatman Griffith
Karleton Hackett
Victor Harris
Frederick H. Haywood
Wilfried Klamroth
Sergei Klibansky
Gardner Lamson
Clifford Lott
Isidore Luckstone
Francis Rogers
Oscar Saenger
Oscar Seagle
William Warren Shaw
George E. Shea
Percy Rector Stephens
Stephen Townsend
Charles A. White
Myron W. Whitney
Herbert Witherspoon

Come to Your Senses!

Thousands of very gifted and even notably brilliant students are painfully impatient before real hard training. They provide some of the most exasperating experiences in the teacher's career. The teacher can endure the dull or even the stupid student who is making an honest effort to progress. But the talented fellow, with ability "sticking out all over him," who does not work!!!!

Such students regard their gifts as aeroplanes that will "zoom" them to great heights without work. They laugh at the advice of those who have achieved prominent positions by dint of gruelling labor. These students—alas—usually arrive at mediocrity when it is too late to acquire technical skill and cultural equilibrium, which would probably have made them great. Sometimes temperament, sometimes conceit, sometimes sheer laziness is responsible for leading them to the "easiest way" which is always the hardest way in the end.

Listen to the scimitar-like phrases of the powerful philosopher, critic, dramatist, George Bernard Shaw, in a letter to a young man who was striving to substitute his "genius" for a real training designed to fit him for fearless competition with others of his age and with the good sense to grasp such an opportunity.

"I advise you very strongly to remain in your groove and *postpone* all thought as to your future career until you have finished your university course with reasonable credit and may offer yourself to whatever cause you may choose to serve, as an adult man with a certified liberal education and the standing and experience of a university graduate. In that character you will be welcome and useful in the struggle for socialism or whatever other struggle may represent your sympathies. There is one character in which you will be welcome nowhere, useful nowhere, and a nuisance everywhere; and that is in the character of an erratic, half-educated youth, at odds with his family and school and with all other institutions within his reach, because he is really at odds with his own unstable nerves. Your letter fills me with horrible suspicions of you in this direction. If they are justified I have no use for you, the socialist movement has no use for you, the world has no use for you, and I pity your family. So you just drop it and see what you can do under the easy circumstances of convention before you ask to be trusted in the difficult circumstances of revolution."

This letter, quoted in the *Journal of Education*, is a classic. Teachers of music ought to save it to show to students who balk at technic and bask in the sunshine of their own self-admiration. We once had a pupil who had great and obvious gifts in composition. After a few lessons in harmony he confessed that it was futile "for him to work at something he knew by instinct." That was years and years ago. He has never advanced a step since. A little of the training that Shaw advocates might have made a master of him. If such a student can be brought to his senses in time, before his priceless hours of youth have been dissipated in "temperament" that balks at the rigors of genuine work, the teacher has accomplished something really worth while.

Snap Judgment in Music

Do not give your musical opinion lightly. If it is worth anything at all it must come from reflection. We have repeatedly heard utterances from half-baked minds upon music that has been the result of a life philosophy. The opinions have been so ludicrous that those who have made them instantly become subjects for ridicule. It is very easy to say that you don't like Brahms, or Moussorgsky, or Palestrina or Cyril Scott or Debussy. But before making such a statement you must first assure yourself that you have become sufficiently familiar with their best works. More than this, you should find out "why" you don't like their works. Much of the casual opinion we hear upon Music is about as valuable as barber-shop opinions upon Statesmanship.

Acquiring a Technic of Interpretation

BY GUY MAIER

The Noted American Pianist

Mr. Guy Maier, easily one of the most distinctive of the American pianists of the present day, was born in Buffalo. His American education in music was received chiefly at the New England Conservatory where he studied piano under George Proctor. Later he studied in Berlin under Arthur Schnabel (piano), and under Paul Juon (composition). For many years he has been one of the foremost teachers of Boston and New York. His recitals of music for young people have brought him wide acknowledgment from the press. Together with Lee Pattison he has given "Two-Piano" recitals which have been among the greatest successes of the concert platform in recent years. The records of the playing of these two artists, made for the sound-reproducing machine, are exceptionally beautiful. Mr. Maier is now at the University of Michigan Conservatory. He is an exceptionally clear-thinking writer and his articles in the present series are sure to attract the attention and interest of all piano students looking for practical means to advance their work. This article is one of many new articles which THE ETUDE *has received from modern teachers.*

THERE has recently been republished, an excellent book by Adolph Christiani, called "The Principles of Expression in Pianoforte Playing." The present generation of music students might dip into its pages with much profit. In the preface the author says, "Fully twenty years ago, when first the idea dawned on me that expression was based upon principles and not merely upon emotional impulse or individual taste, I asked myself and others—what are these principles? How can I obtain a knowledge, where find a clear exposition of them?

"My own teachers have never mentioned the subject, and I venture to say that the conditions of musical teaching, as far as expression goes, are pretty much the same to-day as they were twenty years ago. Every artist and musician to whom I applied had only private opinions to give on the subject. I searched in German, French and English literature for more substantial information, but was astonished at the almost total absence of any practical doctrine regarding the laws of expression."

Very little has been done since Christiani wrote his book in 1885, to remedy the situation of which Christiani complains. Music teachers—even those of much experience—still follow the "corrective" or "parrot" policy of instruction instead of formulating for their students definite principles of interpretation which the student can recognize and apply for himself. Teaching is still too much, "do it this way"—or "hold back here"—or "phrase this so-and-so." After many years of study, the serious student (if he is intelligent and lucky) may possibly evolve a haphazard technic of interpretation. But what of the overwhelming majority of conscientious, serious students who cannot help themselves?

These articles do not pretend to lay down a series of laws which will cover all contingencies, but will attempt to show that there exist specific principles (or "tests," as we shall call them,) which are almost invariably applicable and which, if followed thoroughly and carefully, will show the student how to improve the quality of his work.

When the Pupil "Gets Stuck"

The complaint is almost universal that, "I can get just so far with a piece, but then I am 'stuck.' It doesn't sound well; I cannot play it beautifully or effectively. If only I would know what to do to improve it!" To "make it sound well," demands, naturally, an experienced teacher to guide the student. But frequently, for long spaces of time, students (or teachers themselves) have no opportunity of working under expert guidance. It is during these discouraging periods that the student has his real opportunity to do creative work—if he knows how to go about it!

Therefore, we propose that each work (or "piece") shall be put through many tests in order to find out what is wrong with it, or what to do to improve it. These tests will be valuable only if the student applies each of them in turn (omitting *none*) and if the work has been learned so thoroughly that he can devote most of his attention to listening to his playing of it. There will be:

(1) Tests of Tempo and Outline.
(2) Tests of Rhythm.
(3) Tests of Phrasing, Tone and Color.
(4) Tests of Pedalling.

These can be applied to any work whether classic or modern, rapid or slow, large or small.

Communicating Beauty

"Interpretation" may be defined simply as sharing what you have found beautiful with some one else. In order to be able to communicate this beauty to others one must acquire a technic of interpretation or "presentation," so that the work will be as artistically effective as it is possible to make it. Besides the necessity for not violating the canons of good taste, of symmetry, balance, control and suspense, certain features of the work must be slightly emphasized or exaggerated in order that they may be more easily "communicated" to the hearer.

A percussive instrument like the piano, particularly, needs very subtle treatment, in order to be interesting.

Students ought to be encouraged to exaggerate their "effects," to use more vivid extremes of color and nuance, more *real* fortissimos and pianissimos, to underline more certainly all that they do, even at the risk of a little distortion. Better a bit of exaggeration any time than the feeble, impotent approximations of "effects" which deaden the playing of almost all students. How often one hears, "Oh, I was trying to make it sound that way, and I thought I did!" Even first-rate pianists find at times that some feature of a work has not received sufficient emphasis and that the imagined effect has fallen flat, or is scarcely an effect at all except a drab, colorless one. It is better to play with over-much authority than with not enough.

Before taking up the specific tests there are a few general points which cannot be too carefully stressed. First, supervise carefully your mental and physical attitude before you begin to play. Try to feel eager, enthusiastic and relaxed before you start. Do not appear flippant or indifferent at the keyboard. It handicaps your work enormously. Your attitude should be impressive and serious, but not funereal. Your body should feel attuned to the music in hand, whether it be serious or light, songful or gay. Always try to feel the rhythmical "swing" of the piece before you start.

GUY MAIER

Keyboard Attitude

Also, be sure that you are sitting high enough—with elbows a little higher than the keyboard, and arms held *away* from your body—for then you will be able to use your "weight" freely and are less liable to contraction. Always wait a long time before you begin to play—longer than you think you should—and then, after several deep breaths, begin.

It is well to remember also that when you appear in an auditorium (even a small hall) your playing must adjust itself to the size of the place. The larger the hall, the slower must be your tempi (of rapid works) and the "crisper" you must play, because the additional resonance tends to blur otherwise clear passages. Frequently a pianist feels that he is playing very clearly; and yet, to the auditors who are not familiar with the work and who receive several kinds of impressions on their ears at once, his playing is muddled and ineffective. If he played more slowly and with more accentuation, the audience would easily be able to understand it, and consequently would be interested in it.

In halls the pedal must be used sparingly or not at all in rapid scale passages; but, on the other hand, for slow, sustained portions, the damper pedal can be used longer and more freely than would be advisable in a room. All of the extremes of fortissimo and pianissimo must be carefully marked; and, the singing tone must be richer and fuller than in a room. In fact, when one hears a great pianist play a *cantabile* passage in the studio or salon, it frequently sounds too loudly—sometimes almost harsh. That is because he is accustomed to playing in much larger places which demand an "al fresco" style.

Bottom

It is always necessary to watch carefully that the piece has enough "bottom" (bass)—*i. e.,* it is advisable for students to play the bass tones so fully that they almost overbalance the "top." This is very important and is never given enough attention. Bass tones have not as much penetrating power as the higher tones, therefore they can bear a slight excess of "pressing out" without fear of over-shadowing melodic tones above. Schumann's statement that "By the basses one recognizes the musician, can be applied with equal truth to pianists as well as to composers.

Rests, and spaces between phrases, parts of pieces, and pedal changes must be longer in halls. In general, everything that you do in an auditorium should be more deliberate and more underlined; only in this way will your playing be intelligible and interesting to a miscellaneous group of people.

I. Tests of Tempo and Outline

(These tests are put in the form of questions. Explanations or comments follow after the heavier type. Do not limit your examination of the work to a few measures or a page, but conscientiously go through the entire piece with each test).

The First Notes

1. Does the piece (whether fast or slow) begin very clearly, cleanly and impressively?

It is advisable to begin rapid works slightly slower than indicated, so that the thematic material may be extra-intelligible to the hearer, and also that the pianist may feel complete control of the piece. It is easy enough to accellerate as the work gets under way, but almost impossible to slow down once the pace is set. Slow works, on the other hand, ought to begin a little faster than indicated, for then it is easy to find a good rythmical "swing" immediately, and also a simple matter to slow down, if necessary. What is more deadly than a slow movement which starts haltingly and which drags its interminable feet over pages of notes constantly threatening to sink down exhausted—but unfortunately never doing so?

A Significant Climax

2. Is there a well-defined highest point in the piece, and do I really make there a significant climax?

Almost all works have several high points of suspense or climax, and one highest point. This last must be carefully looked for, and will usually be found somewhere after the middle and toward the end of the piece. It is most often the place which demands the richest or most brilliant playing, and should be greatly emphasized. Avoid "climaxing" too often in a short work, but when the highest point arrives drive it home in no uncertain manner.

An Impressive Ending

3. Do I hold back sufficiently at the end of the piece? Do I "breathe" and pause long enough to make the last measures impressive?

The whole effectiveness of a work depends upon its finish. If the work ends in a lackadaisical or hurried manner the pianist's effort has been wasted; for it leaves the audience dissatisfied. On the other a piece may be indifferently played; but if its end is carefully done it may still redeem itself. That pianist is unwise who rushes final chords in a brilliant work instead of deliberately slowing up and holding back in order to pile up the volume of tone. And how often do pianists strike last tones (whether loudly or softly) and immediately remove their hands from the keyboard meanwhile sustaining the tones with the damper pedal! This is a serious fault and invariably ruins the effect. It would be just as inexcusable if a violinist started to walk off the stage while still holding his last tone! The hands should not be taken from the piano until the final tones have been held their full value and then the hands should be removed simultaneously with the releasing of the damper pedal.

Petering Out

4. Do I "peter out" too soon before the end of the piece? Do I diminuendo or crescendo, retard or accelerate too long or too quickly, thus preventing a fine vital finish?

Too long a retard (in slow pieces) will doom any work to a lingering death; and putting on "full steam" too soon in a brilliant work will kill it more quickly, but just as surely!

Deliberation

5. Do I approach all difficult places with sufficient deliberation? Do I consciously breathe deeply, pause, and keep my body relaxed at such times?

One of the best helps for conquering a difficult passage is to pause before it, take a deep breath, and then while trying to think of the passage as a whole (and not of its separate single tones) exhale slowly while it is played. The long breath induces physical relaxation, stimulates the mind and materially assists in the control of "tricky" places.

Points of Rest

6. Where are the places that give me an opportunity to rest (bodily or mentally)?

In works that demand much technical endurance, or that are complicated contrapuntally or harmonically, there are always measures which are less difficult. The student should go through the work, mark these places and deliberately compel himself to relax each time he reaches them. This, if done carefully, will help him to play exacting pieces with the minimum amount of fatigue. It is also good training for the mind.

Color the Voices

7. Is the entrance of each "voice" or color so very well defined that even the most careless listener can recognize it? Does one voice melt away sufficiently before another comes to take its place?

When a theme or important "motif" enters its appearance should be "chiselled out" clearly from the rest of the tonal mass. It will not harm the work if this entrance is exaggerated; but before another voice assumes importance the first should practically disappear.

Frequently, when the outline of a piece is not as clear as it should be it is because several voices (or themes) are sounding simultaneously with important emphasis. Unless the voices are widely separated on the piano it is not wise to try to "bring out" two themes of equal importance.

The Accompaniment

8. Does the accompaniment have a good swing? Do I play it with a different approach in touch or tone from that which I use for the more important part?

The accompanying figure is just as important as the melodic line. It should always give an underlying "liveness" to the piece and should be carefully treated. Its quality should be as different as possible from that of the important part; and therefore, if you can use quite another color for it you will succeed in making the outline of the work clearer. For instance, if you employ a light hand or arm-touch for an accompanying figure, while you press out the melody richly, you will then have the two different "colors" which are needed.

Basic Vitality

9. Is the accompaniment sufficiently reduced in tone so as to be always "present" without obtruding? Does the accompaniment give a real, basic vitality to the piece?

In practicing, it is very helpful to try frequently to see how softly an accompaniment can be played while still really "supporting" the theme. In doing this it is well also to make the theme stand out as fully and as interestingly as possible against the pianissimo accompaniment.

Something of Interest

10. Is there something of interest going on at all times? i. e., if the melody (or important portion) stops do I "make something" of the accompaniment?

Sufficient Bass

11. Is there always sufficient "bottom" (bass) to balance the work well?

Always remember that better too much bottom than not enough! Upon the fullness of the "overtones" which are given out when bass tones are struck depends the sonority and solidity of the work.

Range of Dynamics

12. Does the piece have a wide range of dynamics? Is there a tremendous difference between my fortissimo and pianissimo, with very well defined gradations between these extremes?

People are not interested in the ordinary piano recital because, as they say, "It is *so* monotonous!" This monotony is sometimes caused by bad rhythm, and poor quality of tone, but mostly by lack of dynamics. After students have learned pieces and play them for a period of time the works tend to "flatten out," outlines blur, the color becomes drab, the dynamics range from *mezzo-piano* to *forte*—and the result to the hearer is boredom. This is a state into which even concert pianists sometimes get, when they play favorite works many times in public. It must be guarded against constantly.

A Live Rhythmical Pulse

13. Does the piece swing well?—i. e., no matter how slow or how fast, does it have a "live" rhythmical pulse? Am I thinking of it in smooth, long beats, or in short, jerky, "movement-stopping" beats?

It is always better—even in very slow sustained works to think in long, swinging, measure-beats. In this way the piece is almost certain to sound vital and alive. For instance, in 6/8 time, do not think of each separate beat, but of making the whole measure *curve* giving good stress on the first beat, a slighter one on the fourth. Sometimes even a measure "curve" is too short and tends to arrest the swing; a two-measure beat is then preferable.

14. Does everything that I do sound authoritative and definite, or only dull, half-hearted and indecisive? Are all my desired effects sufficiently well-marked so as to be "brought home" to the most indifferent of my hearers?

Succeeding articles by Mr. Maier will deal with

II. Tests of Rhythm.

III. Tests of Color, Phrasing and Tone.

IV. Tests of Pedaling.

Self-Test Questions on Mr. Maier's Article

1. *How may one avoid "getting stuck" on a piece?*
2. *Define Interpretation.*
3. *Why should "effects" be exaggerated?*
4. *What is the best position at the keyboard?*
5. *Make a list of ten tests of interpretative technic.*

The Public Library

By Lynne Roche

SCARCELY a town there is now of any size which does not have its public library—and most of these of a nature of which the citizens may well be proud.

Unfortunately for themselves, but a small per cent. of the music students—and sometimes of the professional class—have yet discovered that these institutions of public service have departments of music. Nearly all of them have fine collections of reference books on music, biographies of the masters in composition and of interpretation, and often large collections of music for loan. If they are not thus equipped it is because the musicians of the community have not made their wants known; for the trained librarians in charge of them are usually only too eager to make their service of real worth to all patrons.

Conditions have developed in which it is the thoroughly informed musician who leads in the profession, no matter what his specialty may be. The "narrow gauge" teacher and interpreter must give way to the one who knows a thing and knows it broadly. The musician, in whose head a single idea is as lonesome as a young swain with his sweetheart on the way to an African mission field, has about as much chance of coming out of his work successfully as has a goose in a pillow factory.

Make use of the library—of any one or all within your reach. Store the brain with all sorts of knowledge relating to your art; of its history, of its theoretical details, of musical biography—and then of all related arts—and when the gate of opportunity opens you will be ready to step through to the position of honor.

"The ultimate object of counterpoint, as of harmony, is the formation of taste, of what may be called the 'musical character' of the student. It is of little use to know that a certain progression is forbidden unless we ourselves feel that the veto is not the result of caprice but the considered judgment of men whose taste is really supreme."

Inspirational Moments

When Music Lovers Speak

"WE can do without fire in the house for half of the year, but we must have music the year round."

—SIDNEY LANIER.

* * *

"One thing is certain, the native American stock is missing a great deal by not taking a leaf from the book of the Germans, Swedes, Bohemians and other foreign groups, and learning to sing together."

—*The Musical Leader.*

* * *

"The art which I feel must be introduced into all American schools in the shortest possible time—and it will take time—is the art of music."—CHARLES ELIOT.

* * *

"The real test of all great art is its power to give pleasure to the largest number of persons capable of appreciating it, for the greatest length of time."

—THE ARCHBISHOP OF YORK.

* * *

"It has been my experience to find that most children do possess the ability to learn to play an instrument. Of the hundreds with whom I have come in contact in the work I can recall only three or four who were absolute failures, and they were failures in every other study they attempted. Society is going to demand a great deal more of the next generation than it demanded of us. We enjoyed better opportunities and are more accomplished than our mothers and fathers, but we must give the children of today better opportunities than we ourselves had in order that they may meet the demands which will be made of them in the future."—J. A. WAINWRIGHT.

Why a Musical Italy!

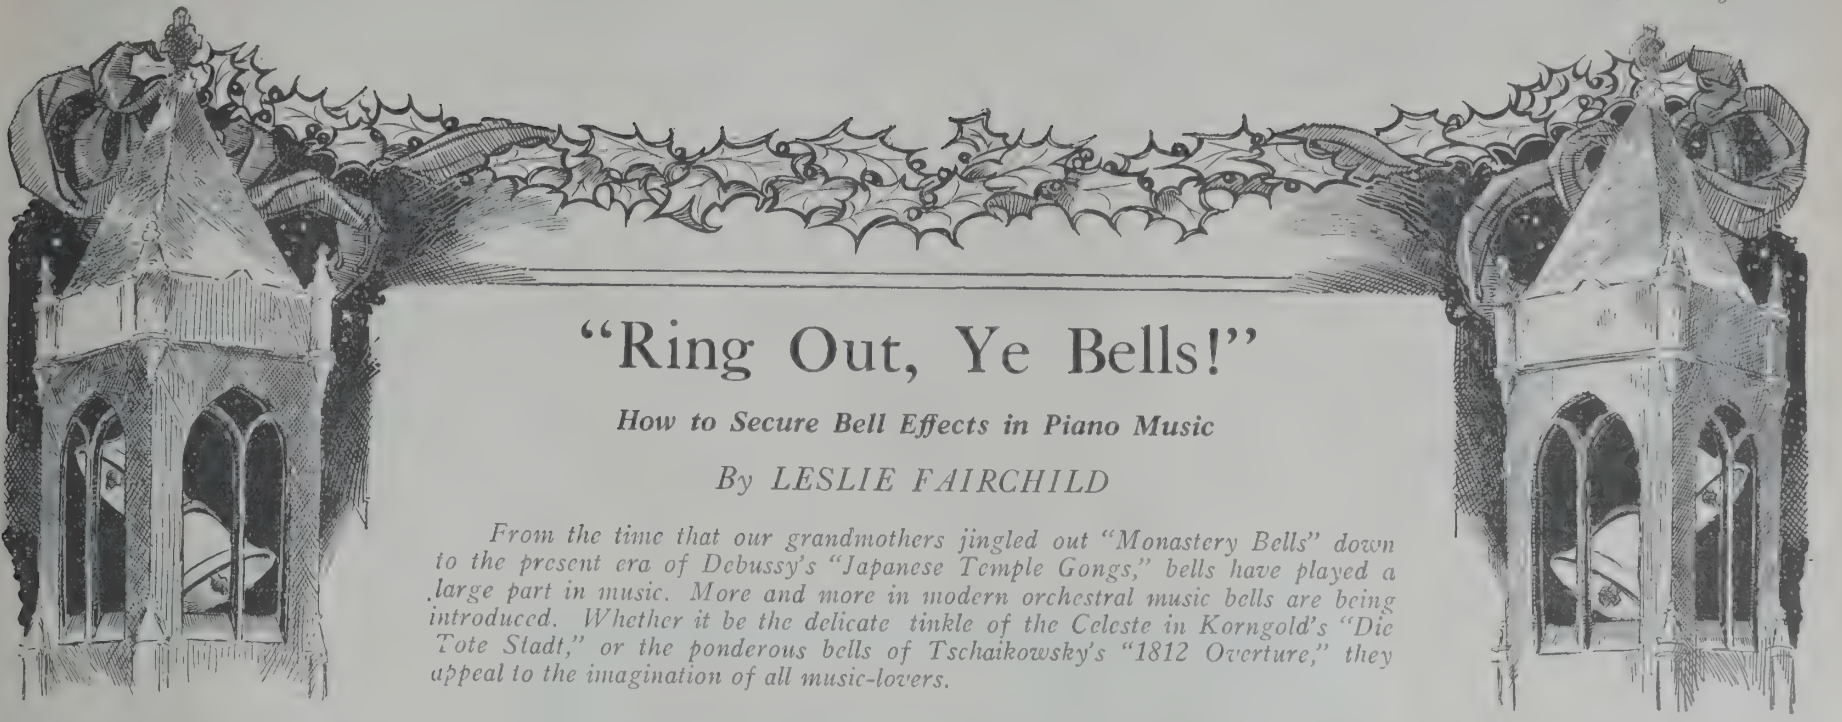
By D. L. Ford

FOR some years there has been more or less of agitation of the question of a National Conservatory of Music for the United States. Whether conditions in our country are such as to make such an institution to be of equal value, it still is interesting and worth while to know something of what other nations have done to foster the musical art.

The prestige of Milan can be better understood when we read the following official report:

"La Scala Opera House is managed jointly by the Commune of Milan and a group of private citizens. The Commune of Milan yearly contributes 350,000 lire (about $70,000), and numerous gifts are received in addition. In the event of a deficit, this is met by the city. Milan also has a government-owned school for instruction in voice and instrumental music. This is the Royal Conservatory of Music Giuseppe Verdi, for which the directors are appointed by the King of Italy. The professors are also selected by the national government. It is open to both Italians and foreigners, provided the latter speak Italian."

"IT is only by knowing thoroughly the great classical masterpieces that they can be duly understood and appreciated."—LANDON RONALD.



"Ring Out, Ye Bells!"

How to Secure Bell Effects in Piano Music

By LESLIE FAIRCHILD

From the time that our grandmothers jingled out "Monastery Bells" down to the present era of Debussy's "Japanese Temple Gongs," bells have played a large part in music. More and more in modern orchestral music bells are being introduced. Whether it be the delicate tinkle of the Celeste in Korngold's "Die Tote Stadt," or the ponderous bells of Tschaikowsky's "1812 Overture," they appeal to the imagination of all music-lovers.

Bells have tolled down through the centuries, proclaiming mankind's greatest joys and sorrows. They have served him on most all occasions and are to this day a necessity to his daily needs.

The first bells can be traced back to Hebrew antiquity, when golden bells were fastened to the garb of the high priest so that their tinkling would call attention of his approach to the sanctuary.

The Romans used bells to announce public assemblies, and a similar custom came into use in the early Christian churches. Although bells had been introduced into Christian churches about 400 A.D., their adoption on a wider scale is not apparent until after the year 550, when they were introduced into France.

Bells have been blessed with the most elaborate ceremonies and consecrated in honor of saints. They are tolled during funerals and also for occasions of great joy. What must the feeling of the people have been when they heard the great Liberty Bell proclaiming the adoption of the Declaration of Independence; and who can forget our own feelings when the bells were rung at early morn to awaken the people to the realization that the World War had ended!

All of us have experienced the psychological effect in the quality of tone a bell gives out. The solemnity and impressiveness of the cathedral bell fills our hearts with reverence; an alarm of thrilling excitement flashes through our mind and body when we hear the first stroke of the fire bell; while the merry jingle of sleigh bells immediately brings to our mind the spirit of "Jack Frost," dancing snow flakes and cheery fires that warm. Is it not remarkable that our lives can be so affected by such a simple thing as tone?

The Piano and Bell Effects

Great composers have used the bell as a medium to express special atmospheric effects in their compositions, and the piano, being an instrument of percussion, is capable of rendering these effects to a marked degree. The student should acquaint himself with all the ways and means of producing these effects:

First—By actually hearing various bell sounds.

Second—By knowing the theory of bell sounds.

Third—By having the technic to produce similar sounds on the pianoforte.

Listening is truly an art in itself. It is surprising the number of musicians who simply play in a purely mechanical manner, neither listening to the vibrations of the instrument nor to the quality of tone they are producing. Merely pushing down the correct notes given in the printed text will never impress one that they are listening to the deep throated bells of great cathedrals or the merry jingle of a sleighing party. Take advantage of the many opportunities you have to listen to all sorts of bell tones; for this is the only way in which you will be able to depict them properly in our own playing.

The depth and richness of a bell's tone are directly proportional to its size. Its clearness depends on the metal used, its shape and the skill used in casting. Its sound is compound and gives out five or more different tones. The first note to reach our ears after the bell has been struck is called the fundamental or strike note, which is really the bell note. The lower note which is heard after the fundamental note has lost some of its density, is called the hum note and an octave above this the nominal. In the first octave are also heard a minor third and a perfect fifth, and, in the second octave, a major third and a perfect fifth. It is said that very few bells conform to these conditions, but those which swing are more likely to do so than ones that are struck.

New Bells Better Than Old

A point is often raised, "Do bells improve with age?" Mr. J. E. Taylor, president of the Taylor Foundry of Loughborough, England, answers this question in a satisfactory way: "Now if one considers this question thoughtfully, it must be realized that it is a difficult one for which to obtain a definite and reliable solution. The oldest bell, for instance, in the Malines Carillon is one of the middle group, and is dated 1480. Now how may one reconstitute or determine the tone of this as it was when first installed in the tower? Its actual pitch and the relation of its harmonic tone to its fundamental note is probably practically the same now as then; but, as to the quality of the tone, who shall say? It is of course impossible to obtain any record of that date to compare with the tone of the bell as it is now. The gramaphone may possibly be a great help to future generations for tone comparisons of that sort; but this machine is of much too recent date to help us solve this often asked question. At any rate, if some of the old bells have improved, they must have been of pretty bad tone in their youthful days. Science today enables one to attain a more accurate and delicate perfection of tone and of tune than has ever before been possible."

What would you think of a two-hundred and eleven ton bell being used to form the dome of a chapel? Such was the use made of the largest bell in the world—the great bell of Moscow. This huge bell was cast about one hundred and ninety years back and is twenty-one feet in diameter and twenty-one feet high. Four years later it was damaged by fire and lay partly buried in the earth for a period of one hundred years after which time it was raised. By excavating the earth beneath, it was made to form the dome of a chapel.

Great Bells of the World

Among other large bells are the great bell of Burma, 12 feet high, 16¾ feet in diameter, weighing 260,000 pounds; the great bell of Peking, 14 feet high, 13 feet in diameter and weighing 130,000 pounds; those at the Houses of Parliament, London, 30,000 pounds; Montreal Cathedral, 28,560 pounds; Notre Dame, Paris, 28,672 pounds; St. Peters, Rome, 18,600 pounds; St Paul's, London, 11,470 pounds.

And the student may ask, "what has all this to do with piano playing?" Just this: The more knowledge we have of our subject the more it will reflect in our own playing. We know that if we are to produce the effect of the large bells, our tone should have great depth and should be rich in overtones. A skillful use of the pedals and a proper attack and touch will enable one to produce these charming effects. If the bells represent the small, tingly type, we have to use an entirely different style of attack and touch to bring about the desired atmosphere.

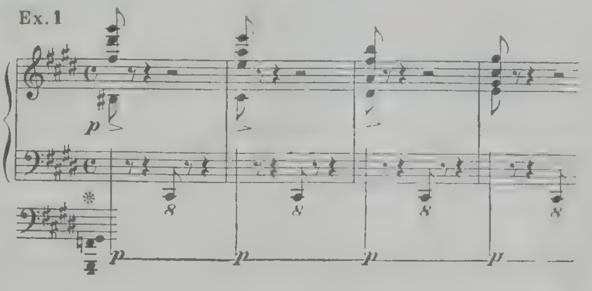
In producing bell tones on the pianoforte there is great opportunity for unusual pedal effects. In fact it is impossible to create the proper atmosphere without a skillful use of all three pedals.

Let us take for our first example Borodin's *Au Couvent* (*At the Convent*). Here we have the uninterrupted tolling of a bell for eighteen measures, whose "bell note" or fundamental is C♯.

From the study of the theory of bells we have found that each has a compound tone; and if we can introduce some of these overtones in the bell note we are in a better position to give a more vivid portrayal than if we simply depend on the single fundamental tone.

Make the experiment yourself to prove the justification of this theory. Note the added richness and depth of tone that the mysterious hum of overtones give. The auditors at once catch the real atmosphere of the effect but are at a loss to explain its phenomena.

Ex. 1

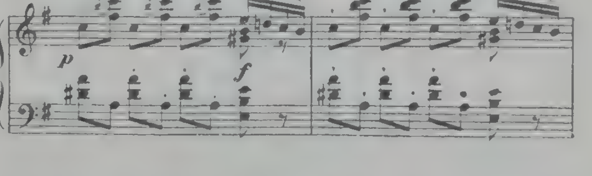


*These notes represent the overtones of the bell. Press their keys down silently, and then seal them with the *Sustenuto Pedal.* The *Damper Pedal* will be used in its usual manner.

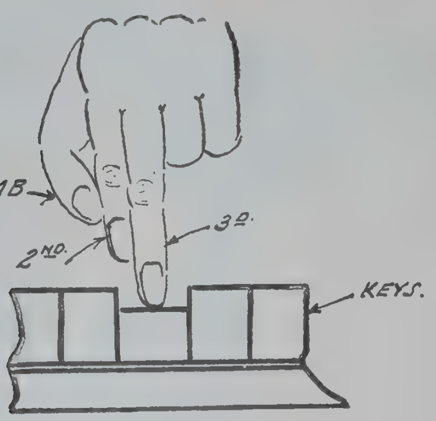
For our next example, let us take Tschaikowski's *Troika, Op. 37 No. 11.* Here we have an entirely different type of bell to depict. It is the merry jingle of sleigh bells suspended over the backs of three spirited horses who are harnessed to a sleigh filled with jolly occupants. In measure thirty and those following we can give a very vivid likeness of these tingling bells by executing them in the following manner.

Do not separate the grace note from the chord as shown in Ex. 2 (a) but combine it with the chord as shown in Ex. 2 (b). Make the attack a crisp finger staccato, as snappy as the frosty air, without a trace of the resonance that the larger bells require. The listeners will not be able to distinguish whether the grace note has actually preceded or is part of the chord, but they will appreciate the added zest and likeness that it gives to this particular bell effect.

Ex. 2



The deep, rich, resonant tone of the Kremlin bell in Rachmaninoff's *Prelude Op. 3, No. 2* can be greatly enriched by employing the attack described below. In the right hand, strike the bell notes with the third finger, binding the second finger and thumb to it thus:

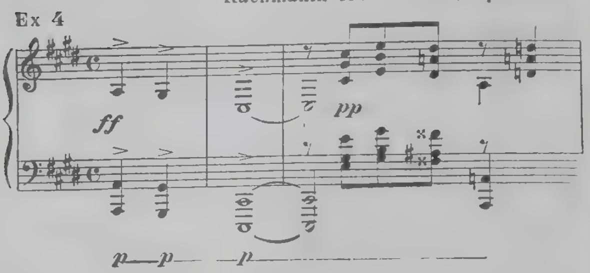


By this method a more accurate attack is possible and the weight of the arm is concentrated on the desired key.

A somewhat stiff attack is used in striking the key; but the wrists are immediately lowered to insure a relaxed condition.

Rachmaninoff's Prelude, Op. 3, No. 3

Ex 4



Numerous other examples can be culled from the vast field of pianoforte literature and the student is advised to study the needs of each individual style, in order to obtain the most desirable effects.

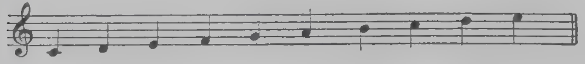
Chimes or carillons are sets of musical bells tuned to a given scale. They are made in sizes from the tiniest sets that we have in small clocks up to sets of forty or fifty bells, the smallest of which weigh only a few pounds and the largest, several tons.

In the east tower of the Notre Dame Church in Montreal hangs a set of chimes consisting of ten bells, the weights of which are:

Do	*6011*	*pounds*
Re	*3633*	"
Mi	*2730*	"
Fa	*2114*	"
Sol	*1631*	"
La	*1463*	"
Si	*1200*	"
Do	*1093*	"
Re	*924*	"
Mi	*897*	"
Total	*21696*	*pounds*

and which form the scale given below.

Ex. 5



*One of the finest carillons of America has been installed in the Harkess Memorial Tower of Yale University. The total weight of the bells is 56,000 pounds and each bears the inscription, "For God, For Country, and For Yale." The largest of the group weighs twice as much as any of the others and is engraved, "In memory of Charles W. Harkness, Class of 1833, Yale College." The bells range from six and one-quarter tons to three and one-quarter. The largest bell measures six feet in height and seven feet two inches in diameter. The largest hammer of the bells is about the size of a coal scuttle and has square corners. Some of the hammers are round, and vary in size and in the length of their arms. Some of the arms are about ten feet long, and each has a wooden plug in it for the purpose of deadening the metallic sound. A long arm, from each of the sixteen notes in a large keyboard, reaches up to the main clapper and allows the several individual clappers to strike the bells with little effort on the part of the player. Six of the ten bells which make up the entire group are so equipped that they can play a half-tone above the true pitch of the bell. These six bells are those having the highest pitch. The sounding of this higher tone on the bell is made possible by the use of an extra tongue within the bell. This is timed to strike a fraction of a second later than the large clapper. The second vibration is reinforced and is made to follow in a more rapid succession than the normal rate of vibration. For the present, at least, the bells will be rung by someone at the keyboard, although it has been suggested that an electric mechanism for the playing of the chimes be installed.

A distinctive manner will be used in ringing the new chimes. Instead of ringing every hour as is the usual custom, they will ring only four times daily; first at rising time, then at noon, then at vespers, and finally at curfew. The selections will be from great musical compositions of the most suitable and inspiring kind. Following is their program:

"THE DUET," BY THE FAMOUS RUSSIAN ARTIST, MAKOWSKY

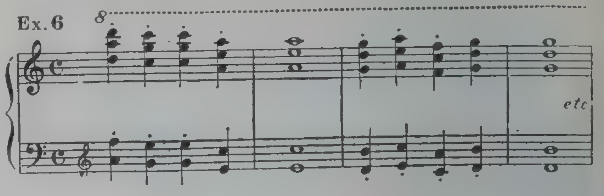
Daily Program— 8:00 A.M... "Scalero" (Old Italian)
12:00 M. .. "World Symphony," Dvořák
6:00 P.M... "Parsifal," Wagner
10:00 P.M... "Gregorian Chant"

Special Program .... York Tune
Integer Vitae
Adeste Fideles
America

In the tower of the Metropolitan Insurance Building of New York city, are four bells that form the Westminster peal. It is said that these chimes are rung at twice the height of any other peal in the world. The four bells weigh seven tons.

Chime effects have ever been present in certain types of piano compositions. All of us have met the individual who considers the pianist, who can execute chime effects in the upper register of the keyboard, that sound so realistic and maybe just grand, to be musicians of exceptional ability. Such imitative effects as these have an elemental appeal; they recall familiar scenes to the mind without a vivid stretch of the imagination, and have been the means of bringing applause to many a mediocre vaudeville pianist. Try the following on your own ears and those of your friends.

Ex. 6



In concluding, we are now at the dawn of a new year of musical activity; a year of golden possibilities, if we will but take advantage of them; a year that may be the most successful of our careers if we will only will it to be such. So let us ring out the past and ring in the new year with a firm resolve to raise the standard of our art; to lay aside antiquated methods for the new; to keep abreast with the finest musical minds of the world, by reading the best periodicals and books. Let us strive to be just to ourselves and to others; so that the evening of the year will find us on a higher rung of the ladder of success.

Self-Test Questions on Mr. Fairchild's Article

1. *Describe how bell tones may be enriched in piano playing.*
2. *Name some of the large bells of the world. Which one is the largest?*
3. *How should one study bell tones?*
4. *What is the psychological effect of the different bell tones?*
5. *How many tones does a bell give out besides its fundamental tone?*

Illustration and Demonstration in Teaching

By Earl S. Hilton

Illustration clarifies the way for pupils. Demonstration brings the object to be learned before the pupil. Illustration opens up to the pupil the possibilities of his learning the object. Demonstration shows how it is done. Illustration is theoretical, while demonstration is practical. Both should be used in a lesson.

For example: A child does not know what a sharp is, nor where to find it on the piano.

Illustration: A sharp is a little sign like this, ♯; placed at the left of a note, like this, ♯♩. On the piano the sharp is found a half-tone to the *right* of the note with the sharp.

Demonstration: Ask the pupil to press the key which represents the note with the sharp. Then, ask him to find the next key to the right of this key he is pressing. When this is done, ask the pupil what that note is called. If his answer is correct, the Demonstration is complete. If not, then review the Illustration, and afterwards the Demonstration.

Exercises for Development of Extensors

By Ada Pilker

With weight playing occupying so much of the piano student's attention, it is desirable to learn numerous ways of developing the extensor muscles, ability in weight playing being almost entirely dependent upon the strength and flexibility of these muscles.

Here are two good exercises for development of the extensors, based upon the famous Swedish movements.

1. Raise the arms straight in front to shoulder height—palms down. Turn the palms upward, angle slightly outward; hold in this position while counting twelve; return to first position, relax, and repeat several times.

2. Raise the arms to shoulder height horizontally—turn palms up. Count twelve; return to first position; relax and repeat.

These exercises practiced several times a day will produce a markedly beneficial effect upon the extensor muscles and the result will be apparent in the increased ease and beauty of the tone.

"The composer must devote to the expression and elaboration of his ideas the best skill at his command."
—Sir Henry Hadow.

---

*I am indebted to Yale University for this interesting information. It might be also interesting to know that there has been a controversy between the University authorities and the New Haven representatives of the United States custom offices as to whether the chimes are works of art or musical instruments. The University claims that the bells are works of art and are entitled therefore to be imported free of duty. The custom officials believe the chimes to be musical instruments, in which case they are liable to a tax of thirty-five per cent.

The Triumph of Grieg

How the Great Norwegian Composer Has Gained Permanent Recognition

By Grieg's Foremost Protagonist

HENRY T. FINCK

WHEN a writer has reached his seventieth year—as I did on the twenty-second of September last—he is by common consent allowed to talk a little about himself and his "past performances." Let me avail myself of this privilege by answering a question I have often been asked: "What do you consider your most important achievement during your forty-three years as a musical critic?"

In my book on *Musical Progress* I wrote: "If I were asked what I am most proud of in looking back on my forty years' career, I would answer: 'My having always stood up as protector of the greatest artists and composers.'" I also expressed my conviction that "the only important function of criticism is to discover and boom genius or superior merit."

Booming Eleven Composers

In carrying this maxim into action I devoted much time and space to "booming" the achievements, in particular, of Bach, Schubert, Chopin, Wagner, Liszt, Grieg, Franz Tschaikowsky, Johann Strauss, Massenet and MacDowell.

Many others of the masters, it is needless to say, were dwelt on with enthusiasm in my critical comments; but the eleven men I have named enlisted my sympathy *specially* because, four decades ago, they were *underrated*.

Underrated? Do I mean to say that the first five composers on my list were not fully appreciated?

That's precisely what I mean to say. Four decades is a long time, and in that period critical and popular opinion on these composers and others has undergone radical changes. I was sneered at many times for boldly declaring that Schumann (you may call him number twelve in my list) was a greater genius than Mendelssohn. Does anybody deny that to-day?

Four decades ago I was stared at and laughed at for maintaining that Bach was a far profounder genius than Handel. To-day I would be laughed at if I said the opposite. Handel's genius—a great and noble genius it was—has stood fully revealed to all ever since his own day; but Bach's veins of gold were buried so deep that it is only in recent years that the musical public has become aware of the fact that he was a billionaire—the one billionaire in the realm of music.

All the world now knows that what Bach is in absolute music Wagner is in the field of opera. But when I came to New York, in 1881, and proclaimed that fact with trumpets and trombones and kettle drums, the Meyerbeer, Donizetti and Verdi "fans" looked on me as a lunatic, pure and simple.

Wagner would have found his level had I never written a line; but I am quite sure that my enthusiastic articles on his genius, and my two volumes on his operas, helped to accelerate the appreciation of his genius in America. That is all a critic can do in such a case.

Of Liszt, as an epoch-making creator, I was for years almost the only ardent champion in critical circles—a singular fact inasmuch as all the great pianists and conductors have worshiped his genius as much as I have.

James Huneker did not write his book on Liszt until after he had repeatedly urged me to do it, as in a way my duty. But I was appalled by the magnitude of the task. As far as it goes, his book is excellent—everybody should read it—but it does not cover the whole ground by any means. Liszt's music is still largely music of the future. In it may be found the healthiest roots of what is now called futurism in music.

Chopin and MacDowell

One of the leading American composers, Edgar Stillman Kelley, has written an admirable book on "Chopin the Composer" in which, for the first time, the full depths of Chopin's oceanic genius are sounded. In it he refers to the "brilliant and daring" lecture I wrote on this composer and afterwards embodied in my *"Chopin and other Musical Essays"* (now out of print). Why "daring?"

Because it took a lot of courage to come out, four decades ago, with the blunt declaration that Chopin was "the supreme genius of the pianoforte"—greater than any of the Germans, including Beethoven.

A prominent American musician summed up the general opinion of my "reckless statement" by declaring that I must be "Either a consumptive Frenchman or a patriotic Pole!" Yet I merely echoed what Liszt and Schumann had dared to intimate long before me. Little heed had as yet been given to their words when I took up the cudgels. I swung them with all my might and main and with stubborn persistence. Today nobody denies that Chopin is king in the realm of piano music: Even the Germans are beginning to see light.

EDWARD GRIEG ACCOMPANYING HIS WIFE, NINA

My critical cudgels were also swung eternally in behalf of our American Chopin, Edward MacDowell. On this point it will be more modest if I allow the eminent San Francisco critic, Redfern Mason, to speak: "At a time when most Americans regarded Edward MacDowell as a pretty good composer 'for an American,' Henry Theophilus Finck asserted his right to be included in the same category as the outstanding Europeans. He did not ask to see the European hallmark before he said a man's music was good. He looked at the work itself and if it pleased him he said so in words not to be misunderstood. Today MacDowell is regarded as a creative genius, even by skeptical Europe. But Finck did not wait for foreign endorsement before he rendered judgment. He did his own thinking and he never fell into the superstition which holds that music, in order to be good, must have a German, an Italian or a French accent."

A Valedictory

Mr. Henry T. Finck has chosen this article as his valedictory as a metropolitan musical critic. He will of course write other articles which we shall have the honor of publishing. However, he has this year terminated a service of forty-three years on the *New York Evening Post*, during which time he has become one of the most distinguished writers upon musical subjects, of his time. Born in Missouri, brought up in Oregon, educated at Harvard, a world traveler, a friend of eminent men and women for half a century, authority upon a half dozen subjects, author of some twenty books, Mr. Finck, who has now retired to the Riviera to complete other books, says adieu to the field of newspaper critics in this article, in which he indicates the most important achievement of his industrious and brilliant career.

There is no room in this article to dwell on the battles I have fought, and the propagandism in which I have indulged in behalf of Schubert (who is greater, both as melodist and harmonist, than even the giant Beethoven), and in behalf of Franz Tschaikowsky, Johann Strauss and Massenet; kings, all of them, in the realm of melody and masters of harmony and rhythm. Their names will, in futures' histories of music, be ranked higher than some of the big idols now being worshipped blindly by professional musicians.

Musical Morning Glories

Why were these composers underrated? Why do some musicians still underrate them? Let me answer this question with another question. Have you ever seen or heard of the "Morning Glory" in the Yellowstone Park?

The first time I visited the park I heard of a stupid boy who threw a stick into the "Morning Glory." His poor dog jumped after it and was boiled to pulp in a few minutes.

The "Morning Glory" is the most glorious of a number of intensely hot pools, lined with the richest colors, which are among the most precious ornaments of that wonderland. They are of fathomless volcanic depth, but so celestially pure and translucent that those who do not know their depth think them shallow.

In music, also, there are "Morning Glories;" works deep but so pellucid that shallow observers have supposed them to be like themselves. That's why ten of eleven composers on my list were undervalued and belittled. (Bach was undervalued for other reasons.)

Much of Edward Grieg's music is of this kind. It seems so clear that as we are often told, "any schoolgirl can play it." But this schoolgirl and the average pianist or singer hasn't the faintest idea of its marvelous depth; and if she plunged into it she is likely to get into "hot water."

Percy Grainger wrote in THE ETUDE for November, 1920: "It is the greatest possible mistake to regard Grieg as a 'simple' composer in any sense. To the uninitiated, perhaps some of his works may seem simple enough; but to the ears of cultured musicians his music abounds with a unique richness of subtle intricacies. In particular, his harmonies are strangely complex, and in this respect stand closer to those of Bach and Wagner than *do those of most modern composers.*"

"In the realm of harmony," Grainger goes on to say, "Grieg was a daring innovator, whose most iconoclastic flights in this direction can most profitably be studied in his amazing arrangements for piano of Norwegian folksongs and dances (opus 66 and opus 72), so much so that it may safely be said that the later moderns of different countries, such as Debussy, MacDowell, Cyril Scott, Delius, John Alden Carpenter, Howard Brockway, Puccini, Albeniz, and others, owe more, harmonically, to the pregnant suggestions of Wagner's and Grieg's harmonic innovations than they do to the influence of any other two composers."

And this daring and original harmonist has been habitually insulted as a writer of drawing-room pieces and songs for school girls!! It is the most idiotic notion in my vast collection and recollection of critical imbecilities; sillier even, if possible, than Debussy's oft-quoted remark that Grieg's music gave him "the charming and bizarre sensation of eating a pink bonbon stuffed with snow."

Did Debussy try to obscure the fact that he learned much harmonically, from Grieg? Many of Grieg's things, to cite Grainger once more, "appear, after lapse of time, like the most modern French ones today." They were "too modern, too iconoclastic, and took in consequence longer to reach the public."

Grieg and the Futurists School Girls

As harmony—and dissonance—are just at present in the foreground of musical discussion and composition, let me dwell a moment longer on this side of Grieg's achievements.

It makes me wild with indignation to think that so much attention is now being given to the senseless cacophonic experiments of the "futurists" while Grieg is ignored—Grieg who *introduced more valuable* dissonantal material into modern music than all these fellows (excepting Stravinsky) combined.

An English critic has described the latest phase of music as "compact of a want of melody and the direst discords." In one way Grieg does not belong to this group, for he is always melodious; but in the matter of *legitimate and justifiable* dissonance no one has gone beyond him. He was quite aware of this—and proud of it,—when he wrote in one of his letters to his most intimate friend, Frants Beyer (which have recently appeared in print): "I have indeed put on paper some hair-raising harmonic combinations."

On pages 216-217 of my *Grieg and His Music* I have referred to many instances of his original discords—as ravishingly new in music as those of Chopin, Wagner and Liszt. If those who prate about Grieg as a composer for "school girls" would give themselves the trouble and pleasure, too, I assure them—of looking up these things, they would never again indulge in such foolish talk.

If you can read German and wish to realize the asininity of the "school girl" idea in all its preposterousness, I advise you most urgently to buy a copy of a book published in Leipzig by C. F. Kahnt: *Die Freiheit oder Unfreiheit der Tone.* It is by George Capellen, the first of the learned theorists to discover the fact that Grieg's harmonies mark a new departure in music. *He devotes no fewer than twenty-six pages to an analysis of Grieg's harmonic innovations,* and sums up his views as follows:

"Grieg is recognized far beyond his native country as one of the few masters who have enriched music with new means of harmonic and melodic expression, and created an admirable home-art distinguished by poetic feeling and the charm of many moods. For this reason the study of his 'Lyrical Pieces' for piano, in particular, cannot be too highly commended to music lovers, were it only to make it clear to them that the one-sided, narrow theoretical rules, as usually taught, too often fail in face of his lovely art, without its losing thereby any of its charm."

This last point is extremely important. The cacophonists of our time—who could learn much, oh so much, from Grieg—drive audiences from concert halls by the naked hideousness of their senseless clashes of sounds. Grieg, on the contrary, uses his daring dissonances only for epicurean flavoring, as a good cook uses the hot spices. He never flings handfuls of cayenne pepper (or pots of paint, as Ruskin would say) in the public's face.

Like the French Debussy and the Italian Puccini (in "Madame Butterfly," particularly) he knows how to give to dire dissonances a quality which sometimes rises to voluptuous enchantment. The supreme master of this art was Wagner.

Mozart's Nose

So *amazingly* original are Grieg's harmonic progressions and modulations (for school girls forsooth!) that Capellen declares that a "really satisfactory theoretical explanation of Grieg's music in accordance with the methods now in vogue is unthinkable, and has not even been attempted so far as I know." (I wish Edgar Stillman Kelley would write a book on "The Greater Grieg," doing for him what he has done for Chopin.)

Yet, these wonderful harmonic (as well as melodic) turns of Grieg, by which any expert knows him at once, are often sneered at as "mannerisms." As I wrote in my Grieg book: "Mozart, too, was in his day accused of having mannerisms; but he retorted with imperturbable good humor that if his compositions assumed a form and 'manier' that made them unmistakably Mozartish, it was with them, presumably as with his nose, which was of a certain size and curve that made it Mozartish and unlike that of other people."

A Melodic Millionaire

Only a genius, like Mozart or Grieg, can make his music sound unlike that of all other composers. It means *personality,* and personality is only another word for immortality.

"Back to Mozart" has in recent years been the motto of many musicians. What they mean by it is "back to melody." Why not "back to Grieg"?

The most wonderful thing about Grieg is that his music is melodically as original and varied as it is harmonically. Schubert, Chopin and Wagner are probably the only other composers who have given to the world as many melodies that are at once unique, beautiful and emotional as Grieg has.

Yet, to this day—and this is the most horribly unjust thing in the whole history of music—many persons believe that, melodically, Grieg was merely a borrower of national tunes!!

The late Victor Herbert was one of my best and oldest friends, yet one day we nearly came to blows because he stubbornly clung to this notion.

"It's no disgrace to borrow melodies," he said; "the greatest composers have done it."

"Quite true," I replied, "but it *is* disgraceful to accuse one of the world's most prolific creators of absolutely original melodies of being merely an arranger of folk-songs."

Another American composer declared that when he read Grieg's melodies, the folksongs of Norway everywhere stared him in the face. I challenged him to point out a single instance. *He couldn't do it!* Nor could I find such an instance in any collection of Norwegian folk music. In the first edition of my Grieg book I declared that "Solveig's Lied" was an exception. But Madame Grieg wrote me promptly that it was as entirely Grieg's creation as all his other songs.

Among his piano pieces there are several collections of arrangements of folk tunes, but these are plainly marked as such. Nobody could ever call Grieg "the grand old thief" as an English critic did Handel.

Ignorance, Sheer Ignorance!

When Dr. Johnson was asked by a lady what had made him, in his dictionary, define a certain word as he had done, he replied frankly: "Ignorance, Madame, sheer ignorance."

It was ignorance, sheer ignorance, that had led the two American composers just referred to to underrate Grieg. It is ignorance, sheer ignorance, that makes other musicians belittle this musical giant. They simply don't know his works; they have heard a few of his simpler pieces played "by schoolgirls," but the *Greater Grieg* is unknown to them.

It is so elsewhere. When Grieg's sixtieth birthday was celebrated, Germany's foremost critic, Dr. Leopold Schmidt, wrote in the *Tageblatt* of Berlin: "He has created a school—but only a few of his works are really well-known here."

Four years later Grieg died. The last letter I received from him was dated December 30, 1905. It was written in a hospital. He had been a sufferer most of his life, partly because of mental depression caused by the hideously unjust treatment of his music by the profession. He had just read my little book on him—the first edition, which is far less complete than the later one written after his death and including all his letters to me.

"The whole book," he wrote, "breathes sympathy and love for my art, and you have made excellent use of the material. Of most particular importance is the chapter on the relation of Norwegian folksongs to my originality. For this I must express to you my gratitude in the highest degree. You have succeeded brilliantly in rehabilitating me in face of the many unjust and ignorant foreign criticisms."

Now, dear reader, I can tell you what I consider the greatest achievement of my musical career. It lies in my having done for one of the six most individual composers that have ever lived what made him write that letter to me.

An Appeal for Justice

I wish he could have lived to see the later and more complete edition of my book. I do not believe any reader of this article will be mean enough to consider me so low as to try to boom that book for commercial reasons. As a matter of fact, I get no royalty from it, having sold it outright.

Therefore, I have a right to urge every professional and music lover to read and reread *Grieg and his Music,* and then to buy his songs and piano pieces and absorb and assimilate them in the light of the facts revealed in that book and the notes to my edition of "Grieg's Best Fifty Songs" (on which, also, I get no royalties.) I ask this as a simple matter of justice toward a creative genius of the first rank who has been persistently belittled.

If I have smashed, destroyed, annihilated the "schoolgirl" notion about Grieg, I have not lived in vain. If I can persuade musicians and amateurs to discover for themselves the riches and the glories of the Greater Grieg, I shall be the proudest and happiest man in the world.

I have given up writing musical criticisms for a daily paper because I am tired—oh, so tired!—of most of the music publicly performed. But I am not tired of Grieg. When I sit down at my piano and play for myself, it is usually either Bach or Grieg.

Think what that means! And think what it means that America's foremost musical genius, Edward MacDowell, to the end of his life adored Grieg more than he did any other composer; and that the same is true of one of the leading musicians of our day, Percy Grainger.

Will you try to get acquainted with Grieg's music? Do, *please!* It is *real* music of the future. As the advertisers say: "You will use it ultimately, why not now?"

Music is a thing of the soul

Test Questions on Mr. Finck's Article

1. *Name the eleven composers whose cause Mr. Finck especially championed.*
2. *How are Bach and Wagner to be compared?*
3. *Who is "King in the Realm of Piano Music?"*
4. *Why were the composers, whose works appealed so much to the author, underrated so long by the world?*
5. *What are the "keys" to the charm of Grieg's music?*

Seven Practices to Conquer Difficulties

By Alice F. Horan

1. PRACTICE each hand separately, determining the fingering to be used.
2. Practice hands together, slow and *forte,* watching each note to discover the harmonic pattern.
3. Practice slowly, strongly accenting every other note, beginning with an accent on the first note.
4. Practice slowly, strongly accenting every other note, beginning with an accent on the second note, just the reverse of the former way. This insures individuality of tone.
5. Practice a group of four, six, or eight notes, according to the formation of the passage. Practice this group lightly, quickly, and above all, clearly. Treat the succeeding groups in the same manner. After this, two groups should be coupled to acquire smoothness and fluency. Each group, large or small, must be repeated several times.
6. Practice by repeating this process faithfully every day, for a time. After a few days of this intensive study a great gain in technique and clarity of tone will be noted.
7. Practice "away from the piano." Test your memory by trying to visualize the entire passage. If you are able to do this, you have indeed conquered the difficulty.

The Play Days of Musicians

By Ebner Hascom

ONE wonders when the great composers ever got time to play, when one looks at their enormous output. Yet several of them were very fond of games of various kinds. Mozart, for instance, was abnormally fond of billiards, as indeed is Paderewski. Mozart often amused his friends while playing billiards, by humming over melodies. Once after he had spent an evening thus he finally went to the piano with the exclamation, "Here it is, now. Listen!" and he played his beautiful *Quintett* from the first act of "The Magic Flute." He had been composing it during his game.

Every music worker should adopt a sport of some kind. Commander Sousa and Josef Lhévinne go in for trap shooting. Brahms is known to have been fond of cards. Kullak, it is said, used to like to box. Verdi made a hobby of farming.

Are You Going Caroling This Christmas?

Revival of a Mediaeval Custom Which is Sweeping the Country; Stories of the Most Famous Christmas Carols and Christmas Folk Songs

By GEORGE A. BROWN

EDITORIAL

One of the most thrillingly beautiful of our Christmas experiences at this day is the revival in America of the Old World custom of singing Christmas Carols in the streets on Christmas Eve.

Millions of people have been awakened Christmas morning with beautiful music that carried with it the glorious message:

"Christ is Born!"

Wholly independent of creeds and sects, mankind bows before the beautiful spirit of the Christ Child. The manger-born Prince of Peace is the highest emblem of the world democracy to-day.

The great war has come and gone. Whose was the final victory? The Prince of Peace! If you doubt this, go to the navy yards of the world where armies of men are demolishing the engines of war. This may be but a step, but it adds a new meaning to the message that will be sung around the world:

"Peace on Earth, Good Will to Men!"

Of all years this is the one when we should join in carol singing with greatest joy and triumph. How can the birthday of Christ be welcomed more gloriously than with beautiful carols? "It came upon the midnight clear" has come into a newer and higher spiritual significance.

In some large cities, such as Philadelphia, the matter of caroling is organized upon a municipal scale. In the "City of Brotherly Love" Mr. Florence J. Heppe, an active music-worker, and a group of faithful assistants, has spent months in past years in getting ready for Christmas caroling. This has led to a great central "Sing" in the heart of the city on Christmas Eve, with large bands of instrumentalists. For two years the huge central chorus has been directed by Dr. Leopold Stokowski, director of the Philadelphia Orchestra. Other groups proceed to all parts of the city.

Let us have more and more Christmas carol singing. Collections such as "Standard Christmas Carols" cost only a few cents when bought in quantity. The carols are so simple they may be learned over night or at a few rehearsals by any body of singers. My! What a glad and happy time everyone has! Perhaps you never thought of getting up a Christmas Carol party to sing in the streets until you read this article. Start right away and you will get a new thrill this Christmas.

THE revival of carol singing in the streets at Christmas time has brought with it a desire for information about the carols. Is is a curious fact, but one well authenticated, that Christmas was not among the earliest festivals of the Church. Irenaeus and Tertullian, early church fathers, omit it from their lists of feasts; and Origen asserts that in the Scripture, sinners alone, not saints, celebrate their birthdays.

The First Christmas

The first evidence of the feast comes from Egypt, about the year 200; and after many changes in the time of year for celebrating the Nativity—some as late as May 20th—the date decided upon by church authorities was December 25th; and in 1038 we find the term *Christes Maessi* (O. E.), from which we get our English word Christmas.

The French word Noël is derived from Natalis (Latin, Birthday); and carol (It., Carolare) suggests the mediaeval ring dance which, like all old dances, was accompanied by singing.

The word Yule is of disputed origin but probably came from an Icelandic root, meaning, "A feast in December."

The First Carol

Possibly, the first carol was sung in the Italian village of Grecia near Assisi, in 1200. Here St. Francis of Assisi made the first Christmas *crèche*, or crib, to represent the manger bed of the Saviour; and he and the brethren of his community gathered around and sang hymns in honor of the birth of Christ.

The later Christmas plays, of which St. Francis' tableaux were the forerunners, were acted versions of Christmas scenes and were helpful to the Church in teaching scriptual lessons, as very few of the people could read. Singing by clergy was introduced between the scenes of the mystery plays; and the people enjoyed these vocal interludes. Their enthusiasm was so great, they often marched through the town, following the wagons on which the scenes were enacted, and joined in singing the carols.

From this custom it was an easy step to the singing of carols apart from the mysteries; and by the 15th century it was a common practice to sing the carols alone, without the histrionic representations.

The Cherry Tree Carol

Many of the old carols are founded upon legends, of which perhaps the most interesting is the "Cherry Tree Carol." The poem appeared in the 18th century; but the story dates from the Coventry mystery plays of the 15th century. Mary and Joseph are on their way to Bethlehem, before the birth of the Saviour. As they pass a cherry tree, Mary desires some of the fruit and asks Joseph to get it. He brusquely refuses, whereupon the tree bends down its branches and offers its fruit to her. The legend of the cherries is intimately associated with the episode of the apple in the Garden of Eden and is one of the oldest stories in the world.

A carol which must have been very popular, judging from its many variants which still exist, is "I Saw Three Ships Come Sailing In." It comes to us from Derbyshire and, in the form now used, dates from the 15th century.

The Coventry Carol, "Lullaby, Thou Little Tiny Child," dates from the 16th century Coventry Corpus Christi play entitled the "Pageant of the Shearmen and Tailors." The melody is charming and while written in a minor mode, as were many old carols, it ends with a major third which has a most beautiful effect when sung unaccompanied by a choir of trained singers.

The Wassail

The Wassail is one of the oldest forms of English carol and derives its name from the Anglo-Saxon "Weshal" (be hale or healthy), a toast equivalent to the modern, good health. The presence of a feasting carol is easily understood, if we remember that most of the great Christian festivals were grafted on the feast days of the old heathen mythology. Christmas coincides with the time when the Druids celebrated the winter feasts; the Romans, the Saturnalia; and the Scandinavians, the Feast of the Yule. The well-known Wassail song familiar to the English people is the North country traditional carol, "Here We Come A Wassailing."

Most of the old tunes were of the folk-song order, being popular melodies of the times and adapted to carol words. An excellent example is "What Child Is This." The original is a charming old love song, "My Lady Greensleeves." Another popular tune is "God Rest You Merry Gentlemen."

"O Come, All Ye Faithful"

The melody of "Adeste Fideles" was probably written about 1780. Many compilers credit it to John Reading (1677-1764); but this is known to be an error. Later it was ascribed to Marco Portogallo. The Latin hymn sung during the Midnight Mass was heard (perhaps for the first time) in the Portuguese Chapel, London, and for this reason the tune is known as the Portuguese hymn.

The hymn "Joy to the World" was written by Dr. Isaac Watts and the tune "Antioch" is an adaptation from Handel's oratorio, "Messiah."

"Hark the Herald Angels Sing" was written by Charles Wesley about 1730, possibly with "Adeste Fideles" in mind, as some of the stanzas are almost translations. The melody is a noble choral taken from the Mendelssohn Cantata "Gott ist Lecht."

"Angels from the Realms of Glory" was written by James Montgomery (1819) and the music is by Henry Smart, one of the great English composers of sacred music. He became blind; but his loss of sight was no hindrance to his genius and he was universally mourned when he died in 1879.

"O Sanctissima," the Sicilian "Mariners Hymn," was at one time very much in vogue, chiefly in non-conformist chapels and was first published in England about 1794.

"Good King Wenceslaus" is probably a legend connected with Saint Wenceslaus of Bohemia who was born about 908 and converted to Christianity. The translation is by Rev. Dr. Neale. The music from Helmore's Christmas Carols is based on an ancient melody. "The Moon Shines Bright" is an English traditional carol from Warwickshire; and "When the Crimson Sun Has Set" is another fine old English carol that shows its clerical source in its Latin refrain.

"See Amid the Winter's Snow" was written by the Rev. E. Caswell and set to music by Sir John Goss.

"Shepherds, Shake off your Drowsy Sleep" comes to us from French sources as also "Come with Torches, Jeanette, Isabelle," the latter probably the work of Nicholas Saboly (1614-1675.)

An American Carol

"O Little Town of Bethlehem" is another American carol. Phillips Brooks wrote the poem in 1868, the inspiration coming from a visit to the Holy Lands a few years previously. Mr. Lewis H. Redner, who wrote the music, was organist at Holy Trinity Church, Philadelphia, at the time Phillips Brooks was there as rector. Dr. Brooks had asked his organist to set the poem to music for the Sunday School. The theme came to Mr. Redner as he slept; and waking, he jotted the notes down at his bedside. While other musical settings have appeared for this lovely poem, Mr. Redner's seems destined to remain the popular one.

"We Three Kings of Orient Are" was written and set to music by an American clergyman, Rev. John Henry Hopkins, D.D.

"Silent Night" is known to all lovers of beautiful carols. It is a German hymn which for a time was erroneously ascribed to Michael Haydn and later to Jos. Aiblinger. It has been definitely traced as the work of Franz Gruber (1787-1863) who was a teacher and organist at Arnsdorf, Austria; and the words were written by Joseph Mohr, an Austrian priest who died in 1848.

In these Christmas Carols, we have inherited a treasure from the past that is well worth preserving; and the ever-increasing use of them by our churches shows that these Nativity hymns still make a strong appeal.

Other carols and Christmas folk-songs that are widely sung at this time are:

Away in a Manger	J. E. Spilman
Good Christian Men, Rejoice	Traditional
The First Noël	Traditional
While Shepherds Watched their Flocks by Night	Old English Melody
Christians, Awake, Salute the Happy Morn	John Wainwright
It Came Upon the Midnight Clear	S. Willis
Come with Torches, Jeannette, Isabella	Old French Carol
Away in a Manger	E. N. Anderson
The Holly and the Ivy	Traditional
The Sleep of the Child Jesus	F. A. Gevaert
Lo, How a Rose	M. Praetorius
A Joyful Christmas Song	F. A. Gevaert
Legend—Child Jesus Made a Garden	P. I. Tschaikowsky

Musical Class Training

By Dr. Annie W. Patterson, B.A.

A good deal has been written about individual music-teaching in all branches. But this activity of the skilled instructor differs considerably from the specific energy and attainments which make the perfect class-demonstrator. A few essential qualifications may be summarized as follows: Thorough and fully memorized *Familiarity* with the subject matter taught, whether this be theory, harmony, counterpoint, "form" in composition, orchestration, history of music or sight-singing; *Method* in the imparting of information to a mixed gathering of students—a gradual leading-up to the climatic points of the discourse at each class, so disposing the material as to have neither too much nor too little to be remembered by the hearers on any one particular occasion; and, finally, *Manner of Delivery*—under which heading might be included easy and fluent speech, clarity of explanation (so as to reach the lowest range of intelligence likely to be in the class), and that pleasant, inspiring form of address which enthusiasm and a real aptitude for the work invariably give to an expert preceptor.

There are minor requirements in class-teaching which are often omitted to the detriment of the good work done. Among these are such items as the unpunctuality of the teacher, who often rushes in either late, or just "on time," and then makes a fuss in winding up as if he, or she, were catching an invisible train. Pupils are sensitive to such ill-advised tactics, and take less interest in their subject than they would otherwise do, thinking, possibly, that the instructor looks upon them merely as so many bores who must be talked to for an hour or so at so much per hour. Under the same objection comes the too great aloofness of the demonstrator. He is often too pre-occupied to listen to the inquiring among his listeners—some earnest if dense student who is not quite sure about some point, and would like a private explanation afterwards. A little tolerance and courtesy on such an occasion is good policy on the part of the teacher. Carelessness in having materials, such as text-books, diagrams, or even the chalk and duster for blackboard handy, diminishes the respect of the learners for their preceptor. These things may seem trifles; but trifles count.

Generally, in class-teaching of whatever kind, the person in charge should endeavor to reach the general rather than the special intelligence of the students present. Nothing is gained by talking "over the heads" of those who come to gather knowledge rather than see it flaunted arrogantly in their faces. A nervous or over-anxious professor, on the other hand, largely minimizes the benefits his possibly real skill and knowledge would confer. As far as can be, in class demonstration, text-books should be dispensed with, as there is a class of student who will be always ready to ridicule the man who is constantly turning over pages to confirm some statement he has made. Concentration on the topic, combined with that familiarity with it which we have emphasized above, is the best antidote for "fumbling about" of all kinds on the part of the lecturer. Notes, if used, should be brief and easily found, and read clearly in the often uncertain light of an ordinary class-room. If illustrations are needed to be played or sung, the lecturer should be wholly competent to do this, if he has not previously coached a student to perform a selection. Especially should a class-teacher have a ready hand at blackboard demonstration. Speed and accuracy in the putting down of chordal sequences (in harmony), or the cataloging of historical facts in neat, chronological order, always impresses the serious student. In short, the speaker should be expert at his branch in every sense of the word, and should send his learners away with the impression: "Professor So-and-So knows what he is talking about."

Giving the Fingers a Vacation

By Joseph George Jacobson

Over how many weary miles do a pianist's fingers travel during the year!

I remember long trips on railroad trains and in primitive countries, in donkey carts and ox wagons, when there was no chance to use a piano, I substituted a two octave and a half "dummy" keyboard, afraid to miss a few days without drilling the fingers. Now I realize that if I had given the fingers a good rest during the vacation time it would have been more beneficial. For a month I tried not practicing once. During this time I drove an automobile continuously over mountain roads, forgetting that there was such a thing as scales or arpeggios. On returning I wisely commenced to practice carefully. The periods were not too long during the first few days and the exercises not too strenuous. I used mostly a few Chopin Études, Bach and scales.

After four or five days I noticed that my fingers were not only as strong as they were before, but they also seemed to have gained in strength and agility. Certain passages which had given trouble before my leaving were easy after a little practice.

Too many pianists become slaves to the keyboard. *Practice*, practice, PRACTICE, seems to be their motto. If they would sometimes forget about this and put their minds on something else for a short while in God's beautiful outdoors, they would certainly benefit. How many pianists go stale through a steady grind day in and day out! It is impossible to concentrate on work when there is no variation. Practicing without thought is useless. Read good books that deal with other subjects than music and you will broaden your scope of view and add to the breadth and symmetry of your playing. Only through the presence of universal culture does genius ascend to a lofty peak of fame which commands the reverence of the world.

Waking the Dozing Student

By Nancy D. Dunlea

The student who sees and plays only the notes on the page is frequently the despair of the piano teacher. Time, not to mention the marks of expression, are completely ignored. Correcting these mistakes patiently for a number of lessons may produce results. But usually the correction must be more forceful if the student is to climb up from the slovenly habit of missing time, touch and dynamics.

A useful plan is to have the student to make some corrections himself. Play the music and ask him to watch for mistakes. The chances are that he will not notice rests, or *forte* and *piano*. By calling his attention to this, he will be more alert in the future.

To make him study out time, as well as feel it or get it by ear, as this type of student is apt to do, request him to place the correct number of counts, in figures, over every note, on a certain page in his lesson. Don't give him too complicated time for the first assignment, but measures in which six-eight time is expressed with two quarters and two eighth notes will compel him to do a little figuring. It may even be necessary for the teacher to "figure" a sample measure to give the pupil the idea.

For encouraging study of expression, request the pupil to use a red and blue crayon. With the red crayon, ask him to mark every loud passage in the piece, by underlining, and with the blue crayon ask him to mark the soft places.

Where the melody is involved in any composition, the red crayon is again useful. It is a new idea to some students that the melody, or "tune," may shift from treble to bass. Ask them to encircle every melody note with red and then play it louder than all the rest of the notes. This exercise is especially useful to the beginner studying Bach. The predominating voice in the Two and Three Part Inventions, for instance, is much easier to bring out, when the student has thus analyzed it.

Determination Masters the Piece

By Earl S. Hilton

Here is the problem. You have a perfectly good piece of music which you are trying to learn to play. Having heard it, you know that it is a very beautiful selection. The teacher assigned it for your special study, and he told you that it was within your ability and technic. But somehow you cannot get it learned. Is it because you lack Will-Power? No. It is not that. You have proved that on other duties of the day.

Very well, here is the solution: You lack determination—continuing, persevering *determination*. You have tried the piece? Then, try again. If you cannot play it right, then examine it to see what is stopping your progress. After a careful examination you might discover that you are not well enough acquainted with an arpeggio or chord passage. Or, perhaps a whole page needs to be carefully memorized before further progress can be made. The teacher will help you to discover your needs for study. But, kind student, it is up to you to determine to work out these difficulties and obstacles.

"In the final analysis, most people in America still attend concerts of all sorts because they enjoy the music. . . . I have never put a number on my program unless I felt that it would be enjoyed by my audiences. . . . Wagnerian music has been in my programs almost every year. People seem to enjoy the Wagnerian music, even if it is fairly heavy musical diet."

—John Philip Sousa.

* * *

"I sing Beethoven songs because the people want to hear these refreshingly melodious songs; then they are so unusual to this day and age; they have a message, a real message that every human heart understands; they are so very singable (when understood); the English translations are so quaintly charming that they are a joy to sing; then, too, I feel it a great privilege to sing such music that has been so long unsung."

Frederic Freemantel.

Rubinstein's Master Methods in Piano Study

Written Exclusively for The Etude

By FELIX HEINK

[EDITOR'S NOTE:—The following article is the first of a series outlined by Prof. Heink, delineating the methods employed by his famous teacher, Anton Rubinstein. Prof. Heink has been director of the Heink Conservatory at St. Louis for many years. He is a brother-in-law of Mme. Schumann-Heink. For many years Mr. Heink had made a specialty of the art of interpretation and is recognized as an authority upon that subject.]

FELIX HEINK

Mastery. 1. Acquiring *Mastery* of the Fascinating Art of Tone-Shading, Tone Color, and Touch after the ideas uggested in lessons from Anton Rubinstein.

"Life is but a song,
 Art is wondrous long,
Yet to the wise her paths are ever fair,
And Patience smiles, though Genius may despair.
 Give us but Knowledge, though by slow degrees,
 And blend our toil with moments bright as these.
Let Friendship's accents cheer our doubtful way,
And Love's pure planet lend its guiding ray;
 Our tardy art shall wear an angel's wings,
 And life shall lengthen with the love it brings."

The truth, inspiration and comfort in these words of Longfellow, when read with full understanding, are singularly helpful to the teacher and to the student in the endless search for wisdom and progress.

Whether Rubinstein was familiar with them or not is difficult to say, but his life career, marked by interminable patience and ceaseless effort in his quest of the highest ideals in music, could hardly be expressed more beautifully in poetry.

Years ago, prior to the time when the writer went to study with the great Russian master, he had been struggling with a series of artistic problems relating to the artistic performance of the pianoforte, that had remained mysteries despite the efforts of other teachers. Rubinstein's plain, practical explanations, definite instructions and sensible interpretation of artistic matters, solved these problems so clearly that it is with the knowledge that this valuable information should be communicated to other generations that the writer has expanded Rubinstein's principles, along the lines that the master laid down. The Rubinstein principles with the writer's delineation of them are revealed here for the first time.

The Influence of Speech Upon Music

Anton Rubinstein, as in the case of many other great interpreters and deep thinkers upon music, seemed to find much enlightenment, and proportionate success in the practice of his art, by emphasizing the close relationship between music and speech. As is well known, one may be able to read a language or read music with ease, but at the same time be unable to read aloud effectively or to "recite" music. The comprehension of the meaning of the creator and the execution or the expression of it are, therefore, two different things.

In this connection it is interesting to record some of the principles and opinions of Rubinstein anent this subject. Rubinstein believed:

1. That in the study of the close relationship between the sound of speech and the sounds of music, the student might gain greatly in comprehending the principles of expressing music.
2. That the real practical value of the knowledge thus gained is enhanced by being put into immediate keyboard operation.
3. That only through the finest possible training of the ear are we enabled to distinguish the infinite artistic variations of the actor's voice; and, similarly, only through the exquisitely trained ear can we appreciate the myriads of delicate gradations of sound which are absolutely imperative in the interpretation of a masterpiece.
4. That, therefore, the ear is the only reliable guide in the mastery of the art of "reciting" and "tone shading."
5. That, as no successful orator or actor would think of repeating a succession of words equally loud, so no successful "reciter" of music would think of playing a number of succeeding tones equally loud.

Rubinstein's Wonderful Hearing

To Rubinstein's wonderfully gifted and finely trained ears the ordinary five gradations of tone, as expressed with the usual five dynamic expression marks, *pp, p, mf, f, ff,* were ridiculously insufficient. The average student in the earlier grades is quite content with these few marks, usually playing everything *ff*. The sooner the athletically inclined student awakes to the fact that there are other gradations of tone than *ff*, the better it will be for everyone in his neighborhood, to say nothing of the poor, patient, long-suffering, hard-working teacher, with ears already calloused by hours of student pounding on keyboards.

The other extreme is the anaemic maiden with the perennially gentle, whispering touch which she associates with the voices of angels. Such pupils have to be carefully made to understand that virility and power are as necessary as delicacy in piano playing.

The Threshold of Expression

Much has been gained when the advanced student can play with the customary five degrees of tone, *pp, p, mf, f, ff*; but even with this, the student is still only upon the threshold of expression. In the true mastery of the art of shading, as I have developed it from the principles of Anton Rubinstein, there are not merely five degrees but twenty-eight degrees between extreme softness and extreme loudness. This adds tremendously to the artistic possibilities in interpretation and contributes a kind of fascination to one's playing which we are accustomed to associate only with that of the greatest concert artists. Moreover, the means of attaining it, as explained later, are exceedingly simple if properly understood and carried out.

ANTON RUBINSTEIN

More Than Five Colors Needed

The student must first of all realize that he must have more than five dynamic colors on his musical palette. If it were possible to bring back the playing of Rubinstein to this day and generation, one of the first things that would impress the hearer would be the master's marvelous power of swaying audiences. Of course, this was due to a great many things, but the principal one was his absolute freedom in dynamic expression, due to the employment of numerous gradations of tonal force.

How can the student set upon his road to approach the heights of Rubinstein? That is a problem to which I have addressed myself for years. The work should be done systematically; and it should be simple. The practical exercises thus devised, for which many have done me the honor of associating my name as the "Rubinstein-Heink" system, belong to art; and I am very happy to have them outlined in part in The Etude. They consist of twenty-four exercises or "forms," all based upon the scales (major and minor). They may seem mechanical at the start (as indeed they should be); but in the end they lead to infinite freedom of expression and those charming effects in tone shading that distinguish the coarse amateur from the real artist. Just as a tongue-tied man can never become an actor with such a restriction, just as a "monotone" can never become a singer, so can the student never hope to become a real artist until all technical and mechanical obstructions are removed.

Of course, the following system presupposes that the student has a thorough knowledge of the major and minor scales, so that they are virtually automatic, and that all the attention can be given to degrees of tone shading.

For convenience, this system is divided into Forms. The student is advised to practice each form and master it before passing to the next one.

Form 1: Play all the twenty-eight tones of any scale (starting with C-Major) over the four octaves from the bottom up to the top and back again in an even *ff* (not *f*) tone-force. Let me remark here, that, to Rubinstein, playing *ff* meant the same as what in public speaking to an orator means "shouting with all the force and power he possesses;" while *pp*, with him, stood for "zephyr-like whispering," that is, giving each tone as lightly a feather-like touch as possible.

Form 2: Play all the notes of the same scale up and down *pp* (not *p*), each touched as lightly as possible, and each tone having just the same light *pp* tone-shading as every other one. The tones should be just barely audible.

Form 3: Start with the lowest note of the scale, the first tone *pp* (tone-shading 1), play upward each succeeding tone one shade louder, reaching the end of the first octave playing *p* (the seventh tone with tone-shading 7); continue upward, adding one degree of loudness to each succeeding tone (as you did in playing the first octave), reaching the end of the second octave playing *mf* (the 14th tone with tone-shading 14), continue that way upwards, constantly adding one degree of loudness to each tone, reaching the end of the third octave playing *f* (the 21st tone with tone-shading 21), continue that way upward, reaching the end of the fourth octave playing *ff* (the 28th tone with tone-shading 28 or full force). Now in turning from the 29th tone downward, you play constantly *diminuendo*, that is, omitting with each succeeding tone one degree of loudness; in other words, starting the 28th (or 29th) tone *ff* (degree 28), you reach the 21st tone playing *f* (or degree 21), you reach the 14th tone playing *mf* (degree 14), you reach the 7th tone playing *p* (degree 7), you reach the first tone playing *pp* (degree 1).

Form 4: Is practiced the reverse of form 3; that is, you start at the bottom *ff* (degree 28) and going up you play a perfect *diminuendo*, ending at the top *pp* (degree 1); then in turning downward and starting the top note of the scale *pp* (degree 1), you constantly add with each succeeding tone one degree of loudness (the perfect *crescendo*), ending at the bottom (as you started) *ff* or degree 28.

How Rubinstein Observed Tone Shading

The following incident, that happened at a rehearsal of an orchestral performance under Rubinstein's direction, might not be inappropriate here. Rubinstein stopped the musicians' playing, saying to the men, "Gentlemen, this passage is marked on my copy *f*; please play it that way."

After rehearsing that particular part over, he stopped again, addressing the men the same as above. They played it again, even louder, Rubinstein again repeating previous correction. The passage having thus been rehearsed several times, the director still insisting that "he was not satisfied, that the phrase was marked by the composer *f* (*forte*), and that he wanted it played that way," one of the players, evidently having lost his patience, spoke up, "I beg your pardon, Sir, but I am playing as loud as I possibly can, and it seems to me the other musicians are doing the same."

Rubinstein answered, "Why, that's just what I am trying to correct; the composer's instructions are that this passage should be played *f*, *forte*, loud, but you are playing it *ff*, *fortissimo*, the loudest possible."

This incident not only illustrates how particular the great interpreter is in his employment of the Art of Shading, and how superficially the average ordinary performer generally regards it, but it also shows the original and characteristic way Rubinstein often employed in imparting his very superior knowledge to others, instruction not easily forgotten.

Other Helpful Suggestions

If the reader has understood my explanation of forms 3 and 4 of the practice of the art of tone-shading, he will have full comprehension by this time not only of what Rubinstein meant by using twenty-eight degrees of tone-shading, twenty-eight figures, instead of the commonly used mere five expression marks, five letters, but the reader will (after practicing the same for a while) also realize to what extent Rubinstein's wonderfully fascinating and impressive piano-playing resulted from the very superior understanding of his, regarding this Mastery of the Art of Shading. If the reader never read that clever sketch, "How Ruby (Rubinstein) played the piano," we advise him by all means to get a copy. It is one of the best and most amusing things of that kind in existence.

All these above-mentioned forms, as well as those hereafter explained, should at first be practiced very slowly; later, as the student attains the skill of placing the right degree of force (touch and tone-shading from 1 to 28) on each tone as required, speed should be developed gradually and systematically with the aid of the metronome.

The student (and teacher) will derive much benefit by going through the entire system, practicing all the scales (and arpeggios) in the following way: Forms 1, 2, 3, 4, legato; forms 5, 6, 7, 8 same as 1, 2, 3, 4, but staccato instead of legato; forms 9, 10, 11, 12, 13, 14, 15, 16, same as forms 1, to 8, but each hand playing octaves instead of single tones. For the purpose of acquiring independence of master works, forms 17, 18, 19, 20, 21, 22, 23, 24 will be found most helpful. Practice those as follows: form 17 right hand *ff*, left hand *pp* (over 4 octaves, *legato*, in single tones); form 18: right hand *pp*, left hand *ff* (4 octaves *legato*, in single tones): form 19 like 17, but *staccato* instead of *legato*: form 20 like 18, but *staccato*, instead of *legato*; forms 21, 22, 23, 24 like forms 17, 18, 19, 20, but in octaves instead of in single tones.

The various ramifications of the different forms are extremely simple; but, even at that, some students will not take the care and time and patience to play them correctly. All that can be said of such students is that they have not realized the first principle of artistic progress.

"Anything that is worth doing at all is worth doing well."

With the faithful and serious student, a decided improvement in playing will be noticed in an astonishingly short time. The principal advance will be found due to the compulsory listening to the constantly changing degrees of dynamic force. Ear training specialists make a great ado over the ability of the ear to perceive correct pitch. This requires acute hearing, it is true, but not nearly so acute listening as to notice the fine gradations of tonal force. The student is all the time working for an ideal. He may not reach the ideal as Rubinstein reached it; but every step in the right direction is important.

How Thus to Master Compositions

After a few weeks of practice with the scales, the same principle may be applied to the arpeggios. Indeed it may be applied to simple compositions and studies The student is invariably surprised and delighted with the progress he makes in this way. It brings life and virility to his playing. Stilted, machine-like playing seems to vanish.

Experiment first with slow and short compositions of little technical difficulty, such as hymns or the song forms. Give the melody tone a few degrees louder shading than the tones of the accompaniment. This independence in tone shading will have been acquired by the practice of forms 17 to 24 inclusive.

In studying a new piece, mark with a pencil over the more important phrases and notes the different degrees of loudness, with a comparative scale of shading from 1 to 28, using your own taste and judgment in the matter, guided by the composer's suggestions. This dynamic analysis is in itself very valuable training. After having experimented with the smaller and simpler compositions, apply the same principles to the larger and more difficult works. Audiences will be surprised by the results obtained.

The complete development of this principle of Rubinstein, as I have carried it on, will take a great deal of time, even when working under a skilled and trained teacher. The results that one gets in a short time should be regarded merely as encouragement. In conclusion let us recall once more Longfellow's prophetic words:

"Give Us But Knowledge Though by Slow Degrees."

It is the writer's purpose in the future to develop pedagogically some of the other principles of Rubinstein, which made him the greatest master of his instrument in his day.

Selecting New Material for Piano Pupils

By Virginia Thomas White

THE progressive music teacher finds the selecting of new material a problem. She must be familiar with the music she uses, because a great part of her success depends on her choice of this. The musical inclinations of the pupils must be studied and kept in mind for no two students have the same tastes. Then she must choose that which is suitable to the pupil's stage of advancement. She must be able to judge a piece by looking at it. Time, rhythm, notes, pedalling, and the technical construction as well as harmony, must be taken into consideration. To meet these many different needs the teacher will seek variety in the material she uses, and must keep constantly alert to the late publications of all kinds.

There is a danger of becoming narrow in choosing this new material and we must guard against that. Naturally, a teacher wants to use the best she can find, and she goes to the works of the masters and well-known modern composers for it. But what if she should find a number suitable for her needs by an unknown composer? Must she refuse to consider it because Mozart did not write it? Indeed not! Since it is suitable for her work and is technically correct, it is worthy of consideration. She should study this number before giving it to the pupil and learn in what points it will be strengthening. The purpose of fresh work is to aid the pupil and the teacher should keep this in mind. The new piece should cover some technical point in which the pupil is weak.

After fully mastering this new composition, the teacher should play it over at the lesson to give the student the desired interpretation. There is much controversy over this point but I have had more success by giving the interpretation than by trusting to the pupil to interpret the piece. It is very frequently more difficult to undo the impression made by self-interpretation than to play the piece correctly once for the pupil.

A Real Ritard

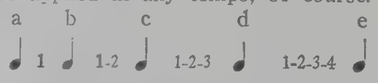
By Sarah A. Hanson

HERE is a little "trick" learned from Dean Ethelbert Grabill, former head of the Music Department of the University of South Dakota.

To get an accurate ritard, take, for instance, notes a-b-c-d-e. Count 1 between a and b, 2 between b and c, 3 between c and d, 4 between d and e. The ritard will thus be absolutely gradual. This is a simple but distinct help in teaching the ritard, of which an accurate one is difficult for the average pupil to achieve.

This can be applied in any tempo, of course.

Example:



A New Year With New Standards

You have already noticed new faces, new writers, new ideas, new fields, in THE ETUDE. This is only a part of a broad journalistic policy we have established, which will retain the best during the coming year and give in addition the ideas of a host of new writers and thinkers upon the art and practice of music.

Standards of Study

MOST educators of the present realize that music study of any kind is beneficial to all classes of young people. Just who should undertake to become trained musicians, however, depends very considerably upon the disposition and mentality of the child. Mr. John Grolle, director of the Curtis Institute of Music, recently related in the *Evening Ledger* some of the qualifications of such students. The following is a quotation:

"What are the standards the student should be able to meet in order to guarantee to the parents that the money expended for musical instructions is well spent? Observation and the experience of years in advising parents and hearing pupils play have convinced me that the following are the too-often-neglected factors in ordinary music teaching:

"First, common lack of knowledge of the key signatures, of form and of analysis; second, a lack of selection of the proper teaching material; that is, the music chosen for the student to study; third, the lack of development of the physical side of musical instruction; fourth, the lack of musical consciousness in the pupil in most instances—by which I mean that they do not know what they are doing; and, fifth, the lack of a correct application of fundamentals, of undeveloped rhythmic response, and of neglect of the creative possibilities of the student.

"This last is an interesting and important point, because I mean creative in an interpretative sense as well as in composition. I have often been astounded by the number of pupils who show an aptitude in writing original melodies, but many of the teachers either do not appreciate this gift or do not know how to develop it.

Choosing the Wrong Instrument

"Another point to be carefully considered is that so many music students choose the wrong instrument: Thus a natural-born pianist may select—or rather his parents do it for him—the violin or the violoncello, or the reverse may be the case. Under any circumstances it happens too frequently.

"No child should be compelled to study music if he does not want to do so. Many parents insist that the children study music simply because the parents wish it—the little student has nothing to say about the matter. This is entirely wrong and generally results in a dislike for the art on the part of the child; the parents simply use compulsion in the matter instead of studying the tastes and abilities of the child. Not every child should study music; many of them have a strong preference for some of the other arts, and this should be considered by the parents.

"There is great need that the community be protected against the fake teachers and also against the teacher who is perfectly honest but who cannot reach the teaching standards which the profession should insist upon. Thus, many young students, themselves still taking lessons, begin to teach music without the slightest preparation as to pedagogic principles and many of them, too, have been poorly taught by incompetent teachers. The result of this is that unbelievably bad conditions exist in much teaching of music, with a consequent impairment of what might be a real talent in many cases."

How Beethoven Played When He Was Deaf

By Elmer Hullinger

THERE is a false tradition that Beethoven in his later years was able to play beautifully despite his deafness. This seemed so incredible to the writer, who has always insisted with his piano pupils "that the ear is the greatest guide to good pianoforte playing," that he carried his investigations to the contemporaries of Beethoven. Finally a trustworthy account of his playing was found in the autobiography of Ludwig Spohr—unbiased because Spohr was a great friend of Beethoven. Beethoven did not play well after he had lost his hearing. The following is translated somewhat literally from Spohr's *Autobiography*. Spohr went to a rehearsal at which Beethoven played one of his trios. He writes:

"The impression was bad, since Beethoven from the very first notes played the piano very poorly. It was obvious that Beethoven heard literally nothing and also that there was no remnant left of the virtuosity he possessed when he had his full powers of hearing. In *forte* passages he played so loud that the wires clashed and in piano passages so softly that whole groups of notes were entirely inaudible. Deafness is a terrible affliction for anyone; but for a master it is beyond comparison."

The Teachers' Round Table

Conducted by PROF. CLARENCE G. HAMILTON, M.A.

This department is designed to help the teacher upon questions pertaining to "How to Teach," "What to Teach," etc., and not technical problems pertaining to Musical Theory History, etc., all of which properly belong to the Musical Questions Answered department. Full name and address must accompany all inquiries

Careless Habits

> I have a new pupil of fourteen years whose former teacher allowed her to leave a piece before it was thoroughly learned, and who reads very inaccurately. Please advise me as to how her bad habits may be overcome.—B. C.

Here is a case where you must get down to brass tacks, and introduce the pupil to the very fundamentals of correct practice. Give her material which requires careful attention to each note, and show her how to cultivate such attention. Take, for instance, one of Bach's *Two-part Inventions.* Have her to practice the part for each hand separately during an entire week before attempting it with the hands together. Have her to play very slowly, counting out loud, or, better still, with the metronome. The next week let her put the hands together, at first playing each measure (with the first note of the following measure) eight times. After this she may put each pair of measures together in a similar manner, and then each complete section of the piece. The whole may finally be memorized.

If she makes mistakes in her first draft of the piece, let her discover each one for herself, under your guidance, and let her draw a ring with a blue pencil around each offending note.

I should discourage her playing anything in a rapid or perfunctory manner—"trying things through"—until habits of accuracy are acquired. After all, carelessness is the root of all evil in piano playing, and must be remedied before any marked advancement can be made.

Changes of Fingering

> In fingering the scales which begin on black keys, should one play the lowest note of the right hand and the top note of the left hand always with the second finger, or use the fingers that come on those notes regularly in the course of the scale?—L. K.

I have found it more satisfactory to follow the latter procedure, although the former is prescribed in many of the textbooks. For instance, I should begin the scale of B flat in the right hand with the fourth finger, and should use the third finger on *every* B flat in the left hand. There are, in my opinion, two good reasons for doing so: first, because it is just as easy to use these fingers as any others; and second, because by this method we do not upset the regular habit of alternating the third and fourth fingers over the thumb, which is characteristic of all diatonic scales. In other words, avoid all unnecessary complications!

Scale Fingering

In response to my suggestion, several members of the Round Table have sent schemes for locating and fingering the scales. Miss Emma Schumacher, of Orting, Washington, says:

I have found the following rules for scale fingering the most simple for my pupils to understand and remember, also simple to execute:

RULE 1. For the right hand, in all scales beginning on the white keys (except B and F major), start with the thumb on the keynote, and put the thumb under after playing the third tone. Next, if playing two or more octaves, put thumb under after the fourth finger is used, then after the third, and so on, alternating. In playing down the scale, put the third finger over first, then the fourth, and so on. The fingering for the left hand is the reverse of that for the right.

RULE 2. In fingering scales that begin on the black keys, place the second, third and fourth fingers of the right hand respectively on F♯, G♯ and B♭, then start playing the desired scale with the finger lying directly over the key which is the keynote of the scale to be played, if it is one of these three. Then place the second and third fingers, respectively, over C♯ and D♯, using the same means to find the fingering for the black keynote. Play the rest of the scale so that the fourth finger will come on B♭.

RULE 3. The right-hand fingering for B major follows RULE 1, but the left hand starts with the fourth finger and puts the fourth over first, then the third, and so on. In F major, the left hand fingering follows RULE 1, but the right hand starts with the thumb, which goes under the fourth finger, then under the third, and so on.

A similar system of fingering is presented by Mrs. Ethel G. Page, of Tilden, Nebraska. Here is another concise summary, sent by Miss Ethel P. Bibber, of Orange, California:

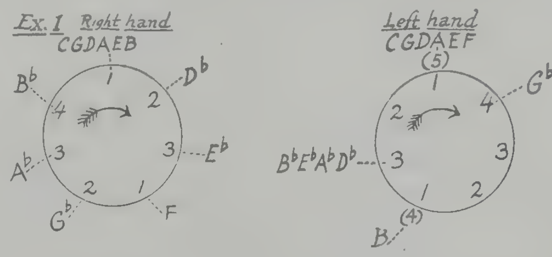
Rules for Fingering the Major Scales

Divide the scales into two classes:

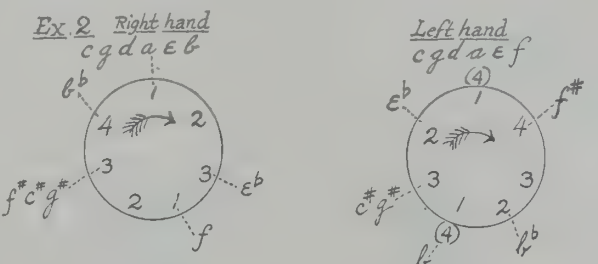
1. Those that *do not* use all five black keys. (*The Don'ts.*)
2. Those that *do* use all five black keys. (*The Dos.*)

1. The Don'ts:
   - ♯'s: R. H., 4th always falls on the new sharp. L. H., 4th always falls on second note.
   - ♭'s: R. H., 4th always falls on B flat. L. H., 4th falls on the new flat (except in F, where it falls on the second note, as in C.)
2. The Dos:
   In both sharp and flat scales the fourth falls on the outside keys of the group of three black keys.

Some time ago a clever teacher suggested to me the following diagram of scale fingerings, which seems even more concise than the above. A given scale begins on the finger indicated, and proceeds around the circle *ad libitum,* in the direction indicated by the arrow:



The above diagrams are for the major scales only. For the minors (harmonic) they may be adjusted thus:



Concert Players

> 1. What are the distinguishing qualities of ' virtuoso pianist or organist? I have read that Mendelssohn performed quite marvellously on both the piano and the organ, yet he was not regarded as a virtuoso of either instrument.
>
> 2. What does the term *Concert* signify, e. g., *Concert violinist, Concert pianist?*—E. D. A.

The term *virtuoso* is ordinarily applied to an expert performer on an instrument, who devotes his attention primarily to concert work. Inasmuch as his most conspicuous quality is an extraordinary command over the technic of his instrument, the virtuoso always incurs the danger of becoming a mere "show" performer, who resorts to all kinds of fancy tricks to astonish his audiences. In the middle nineteenth century, for instance, we find virtuosi accentuated by peculiarities of dress, long, flowing locks, rolling eyes and exaggerated gestures. Paganini, the wizard violinist, is perhaps the most notable example of this class. Liszt, with his magnetic personality and prodigious pianism, was the most famous piano virtuoso, although his later work as composer, conductor and teacher raised him to a higher level than that of a sensational performer. In these days, virtuosi are substituting more normal methods and a more solid musicianship for mere technical display. Similarly, Mendelssohn's high rank as a creative musician overshadowed his virtuosity as performer.

2. The term *concert player* is not far different from virtuoso, since it means one who makes a profession of performing on the concert stage. But it has a more general significance: for while a virtuoso is a concert player, a concert player is not necessarily a virtuoso. One may be an excellent pianist, for instance, and may give much pleasure to the public by his playing, and yet may not aspire to the soaring heights of the virtuoso.

Materials for Grade IV

> I have two pupils who will soon finish Mathews' Book Three, Graded Studies. Is it too soon to start them on Mendelssohn's *Songs Without Words* and the simpler Haydn Sonatas? What sonatas are adapted to this grade? Bach's *Two and Three-part Inventions* would be too difficult, would they not?
> —Mrs. W. E. C.

Some of the simpler *Songs Without Words* could be given in the grade you mention, such as the *Gondola Songs,* Nos. 6 and 13, and *Confidence,* No. 4. Of Bach's *Two-Part Inventions,* I should give first Nos. 1, 8 and 4. These may well be preceded, however, by some of the *Little Preludes and Fugues.* Leave the *Three-part Inventions* for a later grade.

As to sonatas, the first may be selected from the Sonatina Album, edited by Köhler. Within the fourth grade come the following by the classic composers:

Haydn: *Sonata in G Major, No. 1.*
Mozart: *Sonata in C Major, No. 1.*
Beethoven: *Sonata in G Major, Op. 49, No. 2.*

Sight-Reading

> I am deficient in sight-reading. Would you suggest a method or course that would help?—M. H. F.

Pianists are proverbially poor sight-readers, because they have things altogether too much their own way. Practicing by one's self, it is possible to commit any musical sins one likes, without disastrous consequences—to linger over certain notes, to hurry over others, to stammer along to one's heart's content. But if a violinist took similar liberties in an orchestra, he would promptly provoke the anathemas of the conductor and, if he persisted in wrong ways, would soon find himself out of a job.

So to become a good sight-reader, first of all do ensemble work. Get some friend to play duets with you regularly, and acquire the habit of observing strict time to the exclusion of everything else. Better still, form a quartet class with three friends, and hold weekly meetings in some place where two pianos are available, practicing under a teacher's supervision, if possible. There is a considerable amount of music written for this combination; and when it fails, you may double up the parts of a duet.

If you cannot arrange for such practice as I have outlined, constitute yourself your own conductor, and read music in strict time, sometimes with the metronome. Take some collection well within your ability, such as the *Sonatina Album,* edited by Köhler, and read an assignment from it several times each day, reading a new passage at each practice period. Remember that the observance of *strict time* is the *indispensable* of sight-reading, and make this your guiding principle.

Putting the Hands Together

> When a beginner is prepared to play with the hands together, should one teach him to glance from a note on the bass clef to the corresponding note on the treble clef, or *vice versa?*—A. J. W.

Assuming that it is always well to build the foundation before the superstructure, I should advocate the former method. The lower part is often neglected in the enthusiasm for the "tune," and it is wise to guard against such neglect by giving this lower part the priority of attention.

Let the beginner, then, first read the part for each hand by itself, until he is able to play the notes with tolerable ease. Next, let him find on the keyboard the first note in the left hand, and let him place the proper finger on the key. After finding the right-hand note in the same way, let him sound the two notes directly together. The second note is similarly found and sounded, and so on through the exercise.

The Musical Scrap Book

Anything and Everything, as Long as it is Instructive and Interesting

Conducted by A. S. GARBETT

MUSIC OR LAW?

Robert Schumann's mother wished her son to be a lawyer. Robert thought otherwise, yet proved himself a good advocate in pleading his own cause in a letter he wrote her from Heidelberg, 1830. This excerpt is from a volume of his letters edited by Karl Storck. After dealing fairly with her concern for his welfare, but not failing to remind her of his father's plan—"Remember how my father's clear-sighted intelligence destined me at that early age for art or music"—he compares music and law.

"Let me draw you a parallel, and for the present leave everything to Wieck (his teacher); you have every reason to trust him.

"The sign-post pointing toward art, says, 'If you are diligent you can reach your goal in three years.' Law says, 'In three years you may, perhaps, be an *accessit* earning sixteen *groschen* a year.' Art continues, 'I am free as air, and the whole world is my haven.' Law says, with a shrug, 'My practice involves constant subordination at every step of the way, and immaculate dress.' Art goes on to say, 'Where I am there is beauty; I rule the heart, whose emotions I have called into being; I am unshackled and infinite; I compose and am immortal,' etc. Law says, sternly, 'I have nothing to offer you but musty deeds, village squabbles, or with exceptional luck, the exciting mystery. I cannot consider editing new Pandects,' etc. . . .

"I will not turn the conversation on to baser considerations, such as the comparative lucrativeness of the two professions, since the answer is self-evident.

"Dearest mother, I can only give you a slight and fleeting sketch of all that I have thought out so thoroughly. I wish you were with me and could read my thoughts. I know you would say, 'Enter on your new career with courage, diligence and confidence, and you will not fail.' Give me your hands, dear people, and let me go my way. I assure you we have all the more reason to face the future more cheerfully now than we did before."

THE OBLIGING DR. MENDELSSOHN

In his *Pages from an Unwritten Diary,* Sir Charles Villiers Stanford gives a charming glimpse of Mendelssohn as a practical joker.

"When *Elijah* was produced at Birmingham, in 1846," he says, "my father accompanied Joseph Robison to the rehearsal and the first performance. They both made great friends with Mendelssohn, whom Robison had previously met in London, and he extemporized for them on the new organ after the rehearsal, and joined them in a very Irish supper-party at the 'Woolpack' Inn, where the fun was fast and furious and Mendelssohn as full of fun as any Hibernian. His impressions of Mendelssohn's *tempi* exactly tallied with all the other opinions which I have heard from men of his time who had experience of them. His *Allegros* were very quick and his *Adagios* very slow. There was an entire absence of sentimentality. My father told me that the composer's conducting of the *Midsummer Night's Dream Overture* was so rapid that he seemed to be whipping cream!

"After the first rehearsal of *Elijah,* the oboist came up with a long face, and said, 'It is very unkind of you, Dr. Mendelssohn, to have forgotten the oboe so much.'

"'I will put it right for you,' said Mendelssohn, 'give me your part.' He added the long C where the boy sings, 'There is nothing,' holding the pause for so long a time at performance that Cooke was nearly blue in the face. I still possess a thumbnail sketch of Cooke blowing this note, which was drawn by himself at the rehearsal."

STUDIO TEA

"But why should I study musical history?" asked the young man with the flowing hair, the flowing tie, and the long tapering fingers which had just strangled a Liszt Rhapsody. "Why *should* I?"

Balancing a tea cup on one's knee makes it impossible to tear one's hair. It remained, therefore, to consider the question calmly. A person who knows nothing of musical history (and therewith, of course, harmony, counterpoint, musical form and esthetics) can only look backwards. He cannot begin with Hucbald and climb slowly up the five long centuries of polyphony until the pinnacles of Lassus and Palestrina are safely reached; and on beyond them for a century to Bach and Handel. He can observe (and play) a dominant to tonic cadence in a seventeenth century dance-tune without his mind leaping onward to the dance-suite of Bach, the sonatas of Haydn and Mozart and early Beethoven, and on to the Beethoven of Op. 109, 110, 111. He can get no thrill whatever out of Monteverde's reckless adventuring into a world of unprepared sevenths. He cannot foresee Wagner and Verdi from Bardi, Gluck and Weber, or Debussy from Rameau and Couperin. He could accidentally follow the chord of D minor with that of E major, with no sudden catching of the breath, no echo in his heart of some ancient, forgotten chant in the plaintive Phrygian mode.

He has no perspective. He can only look backward, comparing the masters of the past with those of to-day, judging them by wholly modern standards. For him there is no slow unfolding of the majestic tapestry of musical evolution. . . .

"Why *should* I? I know what I like, don't I?"

"You know what you like," was the echo.

"And that's all that matters to me—isn't it?"

"All that ever will matter, perhaps—to you."

Thus the matter was amicably settled over a cup of studio tea.

WHEN RUBINSTEIN WAS SHY

One does not suspect the leonine Rubinstein of having suffered from what is nowadays known as an "inferiority complex"; but apparently he did on the occasion of his farewell to Leschetizky, according to the Comptesse Angele Potocka.

"When Rubinstein gave his Cyclus at Vienna in 1894," she says in her book, *Theodore Leschetizky,* "a number of students had been unable to procure tickets, the house having been sold out long before the date of the concerts. Leschetizky was grieved that his pupils should be deprived of so great an opportunity, and mentioned the circumstance to Rubinstein, who generously offered to give a private concert for their benefit. The afternoon of the 15th of April was fixed upon, and elaborate preparations were made at the villa on Karl Ludwig Strasse. As I look back a charming picture presents itself; the large drawing-room decorated with flowers, the grand piano covered with wreaths, the young people gaily dressed in light colors, carrying bouquets loosely tied with white ribbon, and filled with joyous eagerness to meet the hero of their chosen instrument. Mr. Albert Gutman, Rosenthal, Gruenfeld, Schuett, and other artists, beside a few other intimates were also present. Rubinstein arrived promptly at twelve o'clock. Strange to relate, he seemed nervous and retired to Theodore's private sitting-room to recover his equilibrium. Leaning back in an arm-chair, a cigarette in his mouth, the veteran virtuoso confided his feelings to his friend. 'Do you know, Theodore, I am quite anxious. This is not like an ordinary concert where there is nothing to do but go out and play for an audience. All these embryo artists are surer than I. There is no denying it; if my memory plays me false I shall be unable to cover it up; and you know how many blunders I make even in my own compositions.'

"When Rubinstein stood on the threshold of the drawing-room the audience rose to greet him and a shower of flowers fell at his feet, so that a fragrant carpet was spread from the door to the piano... Touched by the unusual ovation, Rubinstein opened with an improvisation in his own leonine style...when it was over I think no one realized that two hours had gone by...Leschetizky's parting with Rubinstein was made doubly sad by a presentment, alas! too soon to have its fulfillment. They never met again. Rubinstein died in November of that year."

SCHUMANN'S VISIT

An amusing story is told of a visit of Robert Schumann to Heinrich Dorn, the noted theorist and conductor. He appeared at Dorn's house one day, nodded to his friend and sat down opposite him without a word. Dorn attempted to bring him out with some entertaining remarks; but Schumann still remained silent, although he laughed at Dorn's jokes.

Soon Dorn got into the Schumann spirit and sat down to keep the silences. After some time Schumann arose with a smile and said:

"If you come to Cologne, be sure to call upon me."

"Certainly," answered Dorn; "and you come here and we can have some more silences."

Schumann blushed, laughed and retreated. This was one of the more or less grewsome harbingers of Schumann's coming mental collapse.

PADEREWSKI ON RHYTHM

"On the very important and much-disputed question of Tempo Rubato, Mr. Paderewski has kindly written the following in English for this volume," says Henry T. Finck in *Success in Music*: We include here a brief selection from a brilliant essay.

"Rhythm is the pulse of music. Rhythm marks the beating of its heart, proves its vitality, attests its very existence.

"Rhythm is order. But this order in music cannot progress with the cosmic regularity of a planet, nor with the automatic unity of a clock. It reflects life, organic, human life, with all its attributes, therefore it is subject to moods and emotions, to rapture and depression. There is in music no absolute rate of movement. The tempo, as we usually call it, depends on physiological and physical conditions. It is influenced by interior or exterior temperature, by surroundings, instruments, acoustics.

"There is no absolute rhythm. In the course of a dramatic development of a musical composition, the initial themes change their character, consequently rhythm changes also, and in conformity with that character, it has to be energetic or languishing, crisp or elastic, steady or capricious. Rhythm is life...

"To be emotional in musical interpretation, yet obedient to the initial tempo and true to the metronome, means about as much as being sentimental in engineering. Mechanical execution and emotion are incompatible. To play Chopin's G major nocturne with rhythmic rigidity and pious respect for the indicated rate of movement would be as intolerably monotonous, as absurdly pedantic, as to recite Gray's Elegy to the beating of a metronome."

GRAND OPERA, MOZART AND QUOITS

Had Barisani, physician, and son of the physician to the Archbishop of Salzburg, lived a little longer, Mozart might have lived longer also. The Barisanis were friends of the Mozarts, and the two men were fond of each other. The younger Barisani became chief physician of the general hospital in Vienna and, according to Otto Jahn, gave the young composer some excellent hygienic advice, especially with regard to his work.

"Barisani, seeing the impossibility of altogether weaning Mozart from the habit of composing far into the night, and very often as he lay in bed in the morning," says Jahn, "endeavored to avert the evil consequences in another way. He recommended him not to sit long at the clavier, but at all events to compose standing, and to take as much bodily exercise as he could. His love of billiard-playing gave the doctor a welcome pretext for turning this motive into a regular one; Mozart was equally fond of bowls, and he was the more ready to follow the doctor's directions with regard to both games since they did not interfere with his intellectual activity. It happened one day in Prague that Mozart, while he was playing billiards, hummed an air, and looked from time to time into a book which he had with him. It appeared afterwards that he had been occupied with the first quintet of the '*Zauberflote*' (*Magic Flute*). When he was writing down the score of 'Don Giovanni' in Duschek's garden, he took part at the same time in a game of quoits; he stood up when his turn came around, and sat down again to his writing after he had thrown."

Thus casually, over a game of quoits, one of the world's greatest operatic masterpieces was written!

Combating the Musical Charlatan

By *MARTIN VAN METER*

With Letters from Some Well-Known Musical People

A CLEVER paragrapher on a New York paper some time ago showed me a parody upon "America" which he said he was afraid to print. It ran:

My Country, 'tis of Thee,
Sweet land of Trickery,
Of Thee I sing,
I get stung every day,
Fakers think I'm a Jay,
Robbing me every way,
Poor little thing.

Of course every one who knows anything at all about America knows that the vast majority of our people are about the squarest lot of hard-working citizens on earth. Nowhere is the Golden Rule more admired than in America. It is just this trusting attitude and also our enormous absorption in business that makes it possible for a "raft" of shysters, swindlers, fakers, charlatans and frauds to practice upon the American people.

Fake oil wells, fake mines, fake automobile stock, fake every kind of stock, fake schools, fake degrees, all thrive upon a certain small and trusting section of the American public and give us a dual reputation abroad. No wonder that the on-looker thinks of us as a nation half "sucker" and half plunderer. The truth is that the great majority is unaffected either way. There are, however, enough blatant instances of the cheated and the cheaters to provide rich provender for the press. It is well for the readers of THE ETUDE to keep their musical friends informed upon the dangers of the musical charlatans for the protection of the responsible and able body of thousands of finely trained American teachers.

The Monstrous Song Poem Swindle

Our government is fighting these frauds vigilantly all the time, but as long as there are suckers in the sea there will be fishers for the suckers. For years I have watched the campaign in THE ETUDE to suppress the Song Poem Fraud through which literally millions of dollars have been mulcted from the American people. But there are other frauds in music equally bad. What about the fraud teacher? The musical faker? The charlatan? I asked Dr. George W. Charwick, Director of the New England Conservatory, for his idea of the greatest fraud in music. He did not care to discuss the question, but presented the query:

"Is it honest to attempt to teach more music to students than they want to learn?"

The question is one meriting serious consideration. Everybody knows of the nondescript teacher who coaxes pupils to study long after the pupils have reached the frontiers of their talent. We know of one lady in a Western city who actually studied with one teacher for over fifteen years. All this time he was able to induce her to believe that she was progressing and that some day would be a success as a public performer. She never really got very far beyond some of the simpler compositions of Chaminade and Godard.

Possibly the worst of all current musical frauds have to do with some of the methods being employed to teach the voice by mail. The voice, of all instruments, is the one which must be taught in person. The reason is perfectly plain. When you go to a piano teacher, or a violin teacher, you are not asked to start in and learn the art of building your instrument. The instrument is before you complete in every way. With the voice, the trainer has to build at every lesson, and he can do this only by the most intelligent and concentrated power of listening to every little shade of tone-color. One might as well ask a Millet to paint the Angelus by mail as ask Lamperti to make a Sembrich by mail. It simply cannot be done. Yet there are thousands who have paid from five to one hundred dollars for mail order courses in voice training. In one instance the writer saw a signed certificate of proficiency from one of the most notorious of these courses, mailed to a man over seventy years of age, who had only a very ordinary voice and who had never taken the course at all, but merely made an inquiry as to its possibilities.

We do not deny that many singers are self-taught. But that is a very different thing—the singers have had remarkable aural capacity, and, by means of very broad and wide reading and a great deal of listening to concerts, opera and to phonograph records, they have developed the teaching powers in themselves. Such a one is Galli-Curci; but she is one in a million. Galli-Curci has something far more than voice. She has a remarkable mind in that she was able to make a vocal course for herself. Every vocalist virtually requires a slightly different method from that employed in teaching singing to any other singer. It is this that makes the teaching of singing an art; and it is this which makes any stereotyped set of correspondence lessons in singing a joke to all vocal teachers who know.

How Voice Fakers Survive

Yet these voice fakers survive. By means of cleverly written advertising they infer that the systems have the endorsement of people of authority. The writer knew of one correspondence system in which the manager has very ingeniously made quotations from articles in THE ETUDE so interspersed in the advertising as to make it appear that THE ETUDE endorsed the system. There was no real endorsement by THE ETUDE, which I understand had refused the advertising of that particular correspondence school.

The late John C. Freund, proprietor of *Musical America* and *Music Trades*, shortly before his death sent the following letter to the writer in response to an inquiry about his attitude on frauds and charlatans.

E. THEO. NELSON

THE VOCAL LESSONS BY MAIL FRAUD

"The music frauds that I have met in my half a century of experience as the editor of musical papers have been of all kinds, creeds and nationalities. They were of both sexes. The worst were to be found among the voice specialists; and they were all the more dangerous because, having discovered what they believe to be the only road to vocal salvation, they were wholly sincere or at least had finally got to believe the faith that they were preaching.

"One of the worst cases that came to my notice was that of a man who had been a scene shifter in an opera house in Germany—Munich or Dresden, I forget which. Having had trouble with a lady member of the ballet, he fled his country and arrived here under a changed name. After some time he managed to secure a position in the chorus of Hammerstein's Opera Company, then at the Manhattan.

"Finding the work hard and the remuneration small, he resolved to set up as an operatic coach. So he again changed his name and started in gloriously. Being a rather good looking fellow with plenty of gall, he soon had a class of young women of more or less talent (generally less) who were ambitious of operatic fame. He could play the piano a bit; and as he could talk about operatic life, he imposed upon his victims who thoroughly believed in him.

"Finding that one of his pupils was the daughter of a very wealthy business man, he so flattered her with her prospects of success, that he finally got her to the point where he made her believe that through his acquaintance with Gatti-Casazza he could get her into the Metropolitan Opera Company, but it would take money.

"She went home and told her father who was delighted with the progress she was making and, like all American business men, was very glad to dispose of the matter with a check. After a little negotiation, papa signed his name to a check for five thousand dollars, which was handed over to the enterprising vocal teacher who, having collected a few more checks and, of course, failing to materialize with regard to the engagement at the Metropolitan (for it is scarcely necessary to state Mr. Gatti-Casazza never even heard of him much less saw him) suddenly disappeared and transferred his operations to a western city. I have heard, however, that like the cat he came back.

"Another case of a similar character was that of a lady, a vocal teacher, of ample proportions, who always claimed that she had sung with the greatest artists abroad and had their names at her tongue's end. On the walls, she had various autographed portraits, letters, all of which she had picked up at the auction sale of an artist's effects, who had died in this city. With the use of an eraser, a little acid, and other things, she had managed to change the dedication of photographs and letters so that they all appeared to have been given to her. The humor of the situation is afforded by the fact that she had never left the shores of the United States, one of the reasons being that she lacked the money; the other that she was horribly afraid of being seasick.

"Similar instances could be quoted; but, after all, such people do not do much harm except that they hold out promises to the gullible student, which, of course, cannot be fulfilled.

"We now come to a class of frauds that are far more dangerous, because they not only take the money that many of the students or their friends can ill afford, but they also ruin voices. They are the more difficult to get at, not alone because they are really sincere with regard to the particular method that each one has, but again because, in certain departments, they are really competent.

"I knew of a man some years ago who was a good musician and a fine fellow in his way. He was a splendid conductor, but he had no knowledge of vocal training. As an opera coach he would have done well; but, undertaking to train voices from the start, what he did was to ruin a number of good ones in a wholly sincere effort to make them ready for the operatic stage. He was in no sense a fraud, but he did do a lot of harm; and there are many others on the same line; that is to say, men and women who are capable in some particular line of work, but who, in undertaking to do what they are not capable of doing cause a great deal of harm and yet are wholly sincere and never realize the damage that they do. To my thinking, this class is really more dangerous to the student than the frauds who allow the students to sing a few songs, arias or vocalizes to the accompaniment of a piano and let it go at that.

"There is another class of vocal teachers, also sincere, who are very harmful because their judgment is not good and who yet undertake to change a person's natural singing voice. These are the good people who sing a voice up, as they call it, or sing it down. They would transform a fine mezzo into a high soprano. They may add a few high notes of a cold, metallic character; but in doing so they spoil the beautiful quality of the mezzo.

"There are those who take a fine baritone and transfer him into a tenor, or perhaps change their minds and conclude that he really is a bass and sing him down.

"There are plenty such. The woods are full of them. Curious, isn't it, that, with so many able, conscientious and also successful teachers, the student can be misled. The trouble with the really good teachers is they are so conscious of their ability and their good faith that many of them do not think it necessary to advertise. Indeed, they think it rather below their dignity to do so. This lets the frauds in, who, knowing the power of publicity, get busy."

One well-known editor and critic was approached for his opinion upon the subject of Charlatans. This he gave as follows with the understanding that his name be withheld.

The Charlatan Names Himself

"It is easy to dub a person a 'charlatan.' It may be that the term is deserved. In a way the charlatan contributes to the naming of himself.

"Such is the case with the teacher who is the subject of this writing. The common understanding of the term is that he is a person who makes unwarranted or extravagant pretensions to skill or knowledge along a certain line. The man must back up the claims he makes by actual performance, if he is to be accepted by the discriminating public.

"Some time ago the attention of musicians was aroused by advertisements which guaranteed to prepare persons for work in musical comedy and opera in a certain number of lessons. The advertiser had discovered a new method, one that brought about desired results quickly, an intensive method.

"In a way this man was clever. He did not promise to teach students to sing but to prepare them for a certain line of work. But he did claim that he could increase the compass of the voice and the power as well. No statement was made as to voice-quality.

"Observation—provoked by curiosity, it must be admitted—made clear that the students (and there were many of them) did not sing. A great number of observations and listenings failed to disclose even one who actually sang a melodic phrase. All the sounds were successions of tones at different pitches, of the exercise type, high, low, medium, but mostly in the upper and extreme upper part of the voice, as if baritones were to be transformed into tenors.

"The sounds were strange in character, and varied. One class of sounds was much like the mewing of a cat, at the extreme upper pitch of the voice. (This has been called the 'cat method' by some.) Another tone quality was like the barking of a dog, the 'bow-wow' method. A third was in the lowest part of the voice, practically a grunt, as if Mr. Porker were busy. And strangest of all was a thin, squeaky tone, much like that of a chick afflicted with that trouble known as the 'pip.'

"The writer of this article does not class the man as a charlatan because he has a different 'method' from any one else, but because he has made claims which he has not backed up. In two years, so far as is known, not a singer has come out of his studio, but he has attracted pupils.

"An analysis of the quality of the work of the students, so far as can be judged from hearing outside the studio walls, indicates that the teacher believes that to deliver a passage dramatically one must use the voice as it would be used in actual speech. Hence if anger expressed in speech causes a certain adjustment of the vocal organs that same adjustment should be used to deliver a passage on musical pitch. Other emotions are to be delivered through melodic passages as if they were spoken. The various sounds heard were intended to give the voice flexibility and wider range.

"If the public cares to hear vocal artists trained in this method it is their privilege to pay for the hearing. But a bunch of tyro Wüllners will not be likely soon to displace the real singing artists of the day. Meanwhile the probability is that most or all of these voices will be irreparably injured for true singing."

How difficult it is to determine who is and who is not a charlatan in music is shown by the following excellent article from Harriett Brower, well known to readers of THE ETUDE.

"During a long experience in the profession I have seen many so-called charlatans—freaks, some of them. Taken together they present the subject at so many angles that I think my picture must be a composite one.

"The dictionary defines the word charlatan as a pretender or quack. In music, then, it doubtless means one who pretends to know something and doesn't.

"But the subject is not so easily disposed of. The deeper one dives into it the more difficult it appears. Your neighbor may be teaching music by a totally different method from the one you employ; you may have no use for his ways; you may consider them utterly wrong, out of date, absurd. Still, if he is sincere, doing the best he knows how, can he be called a charlatan? There was a time when Wagner was belabored by various critics as the greatest charlatan on earth, in music. The next generation lauded him to the skies.

"As a first glimpse, the charlatan is seen in his studio, to be found in a prominent office building. It is broad day, but his windows are darkened; a dim blue mysterious light pervades the room. He appears in long dressing robe and fanciful slippers; his jet black hair and colorless face add to the exotic impression. A new pupil after playing for him, fled in terror and disgust.

"A second angle. In my girlhood a professor came to town who claimed the ability (for a fee of one hundred dollars) to give those who studied with him the key to piano technic, interpretation and all the rest of it, in ten lessons. He tried to induce my father to let me study with him, but without success. A girl friend of some talent took the course. Later the matter was discussed by our elders, who decided the girl played no better *after* than *before* taking the 'wonderful method' she had been through. So the professor was branded as a charlatan, and disappeared from the scene. Still he might have been in earnest, and might have had excellent ideas, though if this were the case, they must have been above the heads of his patrons.

Beethoven as a Remedy

"Still another. I have heard of a professor with a high sounding name—ending in *ski*—who after diagnosing the new pupil always prescribed Beethoven's Sonatas. Had she lame or weak fingers? Beethoven's Sonatas. Or stiff wrists? Beethoven's Sonatas. Was she afflicted with any or all of the sins of the pianistic decalogue, the same medicine was given—Beethoven's Sonatas. Would it be safe to call this man a charlatan? I know of piano teachers who give scales at the first lesson. Others there are who never bother themselves or their pupils with the subject. Some teachers never explain how to practice the lesson, how to analyze or understand the music. They merely tell the pupil to go home and practice harder. All these are the pretender at different angles of his appearing.

"The artistic temperament is apt to be hot headed and express itself rashly. For instance, I have known of meetings called to discuss the standardizing of music teachers, when the debate would grow so heated that one party would call the opposite side all charlatans. Or, to put it bluntly, whoever disagrees with me is a charlatan, pretender and fraud.

"Now who is wise enough to judge? The man you brand as fraud may have wisdom above yours. In the long run, however, if he is really a pretender and knows nothing, he will be found out."

"THERE is probably nothing more unintelligently used in connection with the pianoforte than the left pedal."

—YORK BOWEN.

"As a matter of fact, the ear has a much more important function in musical memory than the brain, and for that reason the visualizing of music hinders rather than helps the mind in memorizing."

—FRANK LA FORGE.

Long Live "Haydn"

By Mark Cummings, Jr.

EVERY once in a while some one tries to explain just what is meant when we in America are accused of a lack of "musical atmosphere." It is hard to explain. America is spending more money for music than almost any country in the world has ever dreamt of spending. Our concerts and conservatories are over-crowded. Our musical journals, our radio systems and our great talking machine factories are disseminating more music than has ever been distributed before. Why, then, has any critic the audacity to say that we do not have a musical atmosphere.

Possibly it may be because we do not venerate music with that unreserved sincerity that has marked some of the people of Europe. Take the great reception given in Vienna, to Haydn, on the occasion of his seventy-sixth birthday. A gala performance of "The Creation" was given. Haydn was brought to the door of the crowded hall by the coach of Prinz Esterhazy. Members of the high nobility stood at the threshold. There also was Haydn's pupil, Beethoven. The aged composer was lifted from the carriage and placed in an arm chair. This was raised on high by the citizens and he was carried into the hall with all the acclaim which might have been given to a Roman Emperor. The public shouted, "Long Live Haydn!" and the old master was overcome with emotion expressed in tears.

The Musical Scale Intervals

By F. P. Leigh

BY experiment the people of different nations have found that in order to have harmonic music the succession of musical intervals must take place by steps, not transition. "The particular succession by which a composition advances from one note to its octave is called a musical scale." This musical scale is the subject I wish to treat of in this brief paper. We shall endeavor to show how it is made up and the relations of the various tones to each other.

Many intervals in music have specific names according to their ratio. When the ratio is 1, it is called unison; 2, an octave; 3/2, a fifth; 4/3, a fourth; 5/4, a major third; 6/5 a minor third; 25/24, a semitone. A triad is a special arrangement of three notes selected from the scale. Such a combination of tones is found when the ratio of the elements is as 4:5:6 or 10:12:15. When the former ratio occurs, the group is termed a major triad; the latter is termed a minor triad.

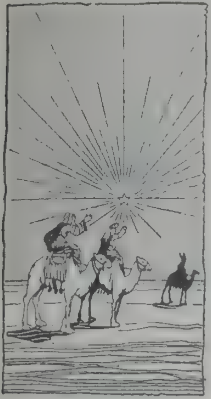
The development of the scale today is based on the diatonic scale, a certain succession of eight tones with gradually rising pitch. The first note is called the keynote, the eighth above is its octave. Now if we take the next note as the keynote and form its octave with the intervening notes in the proper ratio, and thus ascend the scale, it would be supposed that the scale would be as it exists today. But this is not so. If the above operation were carried out we should have an unmanageable lot of notes, seventy-two in one octave. Thus very obviously, one can see that the manner of forming the present scale must be different. Perhaps here it would be interesting to note the ratio of the notes of the diatonic scale. Physicists have agreed to allow middle C to have 256 vibrations per second. With this value then the appearance of the scale would be as follows:

C		D		E		F		G		A		B		C	
256		288		320		341 1/3		384		426 2/3		480		512	Number of vibrations
C		9/8C		5/4C		4/3C		3/2C		5/3C		15/8C		2C	Ratio
	9/8		10/9		16/15		9/8		10/9		9/8		16/15		Interval

Thus it appears that the octave has always twice as many vibrations per second as its keynote.

Now, in order to remedy the above state of affairs when we have 72 notes in an octave, a system of tempering or "evening-up" has been agreed upon. This system makes the intervals between all adjacent notes equal. So the interval of a semitone has been selected as the twelfth root of two, or 1.05946. Finally the relation between the diatonic scale and the tempered scale as it exists today may best be shown by a diagram.

C	D	E	F	G	A	B	C	
256	288	320	341.3	384	426.7	480	512	Diatonic
256	287.3	322.5	341.7	383.6	430.5	483.3	512	Tempered



A Master Lesson on Prelude in D Flat by Frederic Chopin

From the Eminent English Virtuoso Pianist

KATHARINE GOODSON

Famous Work of the Great Polish-French Master, Interpreted in Print

The Rain Drop Prelude

EDITORIAL

This "Master Lesson in Print" is the first of a series which the famous English virtuoso-pianist, Katharine Goodson, has been persuaded to prepare for THE ETUDE. No lesson ever equals that given by a master teacher in person. Nevertheless, ambitious readers of THE ETUDE will find in the following important instruction excelling that which may be acquired during many lessons. The next master lesson by Miss Goodson will be the Liszt-Chopin "Chant Polonaise," "The Maiden's Wish."

The "Preludes" of Chopin were published in 1839 by the Parisian publisher Pleyel, who paid 2000 francs for them. This was then considered a rather large price. Some were completed during the ill-fated visit to Majorca, of which Miss Goodson speaks. Some bear slightly earlier dates. Many seem to be pervaded with an atmosphere of gloom, broken by occasional rays of sunshine. Others are very bright, almost sportive throughout. Rubinstein called them the very pearls of Chopin's works. Liszt said that they were "not the less types of perfection in a mode created by himself, and stamped like all works with the high impress of his poetic genius." George Sand said of the "Preludes," "Some of them create such vivid impressions that the shades of dead monks seem to rise and pass before the hearer in solemn and gloomy funereal pomp." Kleczynski, Chopin's great exponent, says that the "foundation of the picture is the drops of rain falling at regular intervals, which, by their continual patter, bring the mind to a state of sadness; a melody full of tears is heard through the rush of the rain; then, passing to the C sharp minor, it rises from the depths of the bass to a prodigious crescendo indicative of the terror which nature, in its deathly aspect, excites in the heart of man. Here again the form does not allow the ideas to become too sombre; notwithstanding the melancholy which seizes you, a feeling of tranquil grandeur revives you." The "Rain Drop" Prelude is one of the ten most loved works of Chopin.

THE so-called classical and romantic schools of music have for some years been looked upon by the younger school of composers of the present day as things of the past which have duly taken their places in musical history. Last of the long line of great classical composers, Brahms may be said to have concluded that particular epoch; but Brahms, who was to continue the Beethoven tradition, was not born until 1833 and was actually preceded by two of the greatest of the romantic composers of all time, namely Chopin and Schumann, born in 1809 and 1810, respectively. The works of these two composers created an upheaval in the "Classical" camp, just as those of Debussy disturbed the continuity of the line of romanticists. Thus came an overlap, and in music, as in literature, there waged a war between the classicists and romanticists. Among the former the genius of Brahms, while exerting an immensely powerful influence in carrying on the classic tradition, was not more than sufficiently powerful to bring it beyond a glorious end, which tradition may be said to have culminated in the stupendous *Fourth Symphony in E Minor.*

Brahmsites and Wagnerites

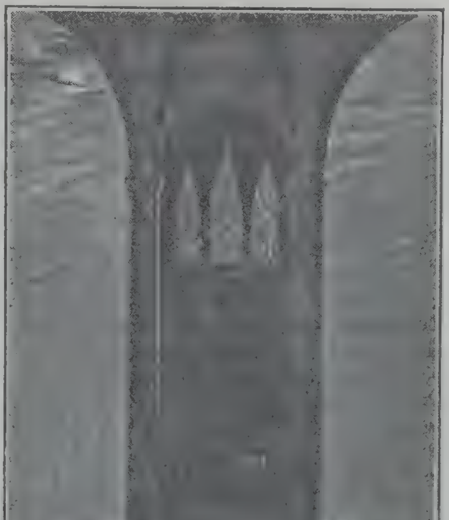
Richard Wagner had likewise become a predominating force, and the battles between the Brahmsites and Wagnerites are ancient history. The overwhelming influence of Wagner, however, was something that stood almost alone and, in spite of such wonderful things as the "Siegfried Idyll," and the "Faust Overture," and other works, can hardly be considered in regarding the development of so-called absolute music of the romantic school as apart from opera and music drama.

Schumann and Chopin remain therefore the two outstanding figures among the great romanticists; and, breaking into the reign of classical tradition as they did, even the severe Brahms could hardly avoid being affected in some slight degree in his earlier work by the novelty of their individual idioms. While there are many instances in the earlier work of Brahms which show the influence of Schumann, it is clear that the more or less exotic nature of Chopin's temperament appealed to him far less; but there are distinct evidences of his being unable to escape entirely from its fascination, as, for instance, in the early *Scherzo Op. 4* for pianoforte.

Chopin's Immediate Appeal

Wherein does this fascination lie? Sometimes one is fascinated by a person or his work in a way which it is not easy to account for and which can hardly be explained. This is far from being the case with Chopin. Almost everything that he ever wrote makes, in a varying degree, an almost immediate appeal. His works have also that remarkable quality of appealing almost equally, if not indeed more, to the lay mind of the general public than to the musician himself. The explanation is simple enough, and may be summed up—curtly enough, 'tis true—in two words, namely, melody and rhythm. Rhythm is the unknown quantity in music to-day; it may be likened to a mine, the richness of which is known to be almost limitless, but of which only the surface has as yet been scratched. Rhythm attracts the attention, whether consciously or unconsciously, from various causes such as its variety, its seeming novelty, its intentional monotony and so on. The *Prelude* on which I am writing this analysis is a quite wonderful example of "intentional monotony" in rhythm, but I shall refer to this again later, in more detail. Perhaps no composer reveals in his works more spontaneous inspiration in the matter of rhythm, and especially in the matter of rhythm combined with inspired melody, than Chopin. As to melody, it flows clear as crystal in a perpetual stream; sometimes a torrent, sometimes a raging tempest, but always clear; seldom involved, never subtle. With Chopin's music, it is not a case of "He that hath ears to hear, let him hear," for everyone can hear this music which, so obviously inspired by deep and sincere poetic feeling, nevertheless speaks so clearly of simple things, without dealing in involved argument about them. Argument, or, speaking more technically, development, was not a strong point with Chopin. He was a dreamer who painted musical pictures—preferably small ones—in which he depicted his dreams; and these pictures, apart from the originality and beauty of the musical ideas, are designed with a remarkable sense for balance, proportion and effect in the treatment of the forms which he used.

So much has been written about Chopin, and the details of his life are now so well known, that is is necessary here to give but a short summary of his career.



A FANTASTIC IMPRESSION OF THE D FLAT PRELUDE

By the Noted European Artist, Robert Spies

Born in 1809 near Warsaw, his father a Frenchman, his mother a Pole, his sympathies were almost entirely with Poland; his father having gone to that country as quite a young man. Appearing in public when he was only nine years old, he was looked upon as a prodigy; and his success had the effect of creating a demand for his appearance at the houses of the musical aristocracy in Warsaw, where he had the advantage of meeting many of the most cultivated and intellectual people of the country. At such an impressionable time in his childhood, these associations could hardly do otherwise than stimulate that refinement which was so much a part of his nature and which revealed itself so consistently in his work. At this time, though the question of his adopting music as a profession had not yet been seriously considered, he was studying harmony and counterpoint with Elsner, the Director of the Conservatoire of Music at Warsaw; and his gift for improvisation was already very developed. Though he had a delicate constitution, he was a healthy boy, of a gay and lively disposition, and entered into all the fun and jollity of his child companions. From his twenty-first year till 1849, the year of his death, he made his home in Paris; and, with the exception of short visits to Germany—where he became very friendly with Mendelssohn, Schumann and other famous musicians of the day—and one short trip to England a year before his death, he rarely left the French Capital.

The Visit to Majorca

Mention must be made of his visit to Majorca in 1837, in the company of George Sand (Aurora Dudevant) the famous authoress and her son. Introduced by Liszt, she exercised an extraordinary power over the artist; and it was a case of mutual infatuation. It is particularly appropriate to speak here of this Majorca visit, as it was during this holiday that the famous *24 Preludes* from which I have selected the well known one in D flat for this lesson—were written. Owing to the unsatisfactory condition of Chopin's health at this time and also to the dampness of the climate, the Majorca visit was not a success; and it is possible that the seeds of his illness, of which the first serious signs became noticeable in 1840, were sown during this visit. His lungs became more and more affected and he passed away in 1849 in Paris where he was buried in the Cemetery of Père-la-Chaise.

The Preludes

As is well known, there are twenty-four of these little pieces, each one a gem of inspiration and spontaneity. The title may not be considered to be entirely appropriate, for each piece is an individual little work, and not a prelude to anything that follows. The *Prelude* has usually been more associated with the Fugue than anything else, as in the *Preludes and Fugues* of Bach, Mendelssohn and other composers. In the latter cases it is usually a comparatively short composition, built up on a single theme—more often of a figurative rather than lyrical nature—and carried out right through the piece, though sometimes with slight episodical matter for the sake of variety. The *Prelude* is also frequently met with as the first number of a *Suite* of short pieces in various forms.

The Chopin Preludes are, on the other hand, almost entirely lyrical, though at times rising to almost dramatic significance, as in the famous No. 16 in B flat minor and No. 24 in D minor. The unity of each little piece is, however, maintained in almost every case by the continuity of the figure of the *accompaniment* to the melody, whatever variety may occur in the latter. In a few cases (as in Nos. 7 and 20 and the very beautiful No. 17) they are just beautiful melodies with a simple harmonic accompaniment to support them. In the *Prelude in D flat,* the sense of untity is brought about by the almost incessant reiteration of the eighth-note in the accompaniment, and this is a striking instance of the "intentional monotony" in rythm referred to above. It gives an atmosphere and character to the piece which nothing else could have done. It is probably this particular effect which has led to its being christened the "raindrop" Prelude; really rather a sentimental and unnecessary effort of the imagination!

Perfection With Simplicity

The little work is built up in the most simple way, but with a perfection which so often goes hand-in-hand with simplicity. The form is that of a lyrical song: i.e., (1) a first verse or section; (2) a varied middle section in the tonic (enharmonic) minor; (3) return to a curtailed version of the 1st section, with a short Coda of eight bars. The structure is as simple as the form itself and may be analyzed as follows:

A (I) The Theme of eight measures, which consists of the first four measures repeated.

A (II) A second part of above Theme, also consisting of eight measures with a prolongation of three measures leading to a repetition of A (I), with ending slightly altered, so as to bring the cadence to a close at the entry of the Middle Section, B (I), in C sharp minor.

B (I) A Theme of eight measures repeated, but with a change in the last four measures to the relative major key of E. These sixteen measures are then repeated in their entirety.

B (II) A second part of above Theme, likewise of eight measures repeated, but—similarly to B (I), with a change in the last four measures of the repetition.

C. Return to the first Subject, breaking off after the sixth measure, where commences

D. The Coda of eight measures.

Predominating Points of Interest

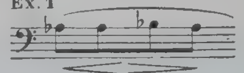
The two predominating points of interest in this little piece are (1) That it hardly ever leaves the tonic key (major or minor) in which it is written, with a momentary exception of four measures here and there to the most closely-related keys. (2) The almost incessant reiteration of the eighth-note in the accompaniment, already referred to above as an example of "intentional monotony" in rhythm. (3) That while these two points would seem to engender dullness and monotony, there is a continual feeling of freshness and emotional interest. How this is done is a study in itself for the student, and one which he can follow out in detail to great advantage. For instance, observe at the third measure of A (II) the modulation to A flat minor, and how, four measures later, by the simplest means this is brought a tone higher to B flat minor, giving an almost entirely different tonal color to the same melody. The prolongation of A (II) by three measures, before the return to A (I), is one of those devices, here so entirely spontaneous, which break up the mechanical squareness of design so effectively. The two eight-measure sections of B (I) should be carefully compared, in order to appreciate the full value of the change to the relative major (E) at the thirteenth measure; with the gradual crescendo in the five preceding measures, this E major chord produces an almost triumphant effect as if releasing the soul from its mood of gloom and foreboding. B (II), with its note of resignation, leads us back gradually into less troubled waters. The chords at measures 4 and 12 in this section should be carefully compared, for such changes as these produce an emotional significance which would be entirely lacking were the chord at 12 to be a mere repetition of the previous harmony. At D, the Coda, the two unaccompanied measures come as a relief and add much to the effect of the once-more returning iteration of the eighth-note accompaniment which dies away only on the ending of the melody itself six measures later.

KATHARINE GOODSON

Poetical Effects

Regarding the performance, there are a number of small points which, quite apart from the "singing" of the melody, go to increase the poetical effect of the interpretation. The very fact of the continuous reiteration of the eighth-note (usually the *dominant* of the key) in the left hand makes it very necessary that this should not be mechanical. It should have the effect of some subdued force underlying the calm of the melody and should be graduated accordingly, having an individuality of its *own.* In measures 2 and 6 especially, on beat 2 and 3, the progression

Ex. 1



from A flat to B flat should be given some significance. Before the B flat is struck the pedal should be raised and put down again only on striking the fourth beat of the measure. The melody, while of an indefinable plasticity, should be played without any sentimentality. Opening, there may be a slightly increased fullness of tone at the ninth measure, and this should be varied again four measures later on the repetition of the phrase. At A(II) the insistence of the repeating note in the left hand is very happily almost lost until eleven measures later where a slight nuance should be made in returning to the opening Theme. In this measure the progression F, G flat, A flat, in the left hand should be observed and be treated melodically. At the measure before B(I), while the A flats should not be in exact time, there should also not be any marked *ritardando* before the entry of the subject in C sharp minor. It should be explained that the legato line in the right hand, at B(I), is to indicate that the repeated notes are to be gently pressed down in their succession as opposed to being struck—and this applies throughout this section, in greater or lesser degree, as the music is *f* or *p*. The *crescendo* at the eighth measure must be very gradual and should only increase to *f* (not *ff* as marked) at the thirteenth measure. The effect of the *ff* should be reserved for the repetition which follows immediately. In this way monotony is avoided and some sense of climax attained. At B(II) there is a feeling of tender resignation and except for the repeated note this should be played very *legato* in both hands. At the ninth measure, commencing *p* the feeling of this should be intensified by a fuller tone in the *crescendo* with a slightly-hesitating stress on the chord at (I.) A slight *nuance* in the measure before C brings the return of the first subject, which is interrupted in its repetition by the short Coda. This is a very simple melodic peroration, held together once again by the repeated note in the accompaniment.

Thus ends this little piece which, apart from its musical beauty, is about as perfect in its miniature form as it is possible for such a thing to be.

The Singer's Etude

Edited for December by the Eminent Voice Expert
NICHOLAS DOUTY

It is the Ambition of THE ETUDE to Make This Voice Department
"A Vocalist's Magazine Complete in Itself"

"The Compleat Singing Tutor"

IF old Sir Izaak Walton were to return to earth again, in this year of grace, 1925, I wonder what his sensations would be. Perhaps there still can be found upon the banks of the placid Thames or the rustic Seine, or near the quiet waters of the many canals that intersect Holland and Northern Germany, ancient men who fish with the same endless patience the long day through. To them the art and pleasure of fishing are important, not the catch. But the day of the willow switch and the old bent pin has passed long since. Nowadays the fisherman arms himself with a seemingly endless paraphernalia of rods and reels, flies and nets, to accomplish the same purpose. Sir Izaak would discover that nothing is ever "Compleat" in this world; that all life consists of ceaseless, never-ending change.

Virtue in New Ideas

Nor can the vocalist, in his ardent search for some sure and eternal foundations upon which the whole of his art unchangeably rests, hope for much greater success than the historic fisherman. He must remember that all art (and the vocal art is no exception) is continually in a state of flux. If his point of view has crystallized, has become too hardened, so that he cannot move with the times, he will soon be left behind in the struggle for success which intensifies with every succeeding year. Failure, all too often, is not the result of lack of ability; but it comes from a mental rigidity which the passing years tend to bring to every man unless he is forever on the alert.

The old tunes, the old loves, the old homesteads, and the old singing methods may be the best; but unhappy is the man who can see no virtue in the new ideas and the new discoveries. He has become an intellectual fossil and he deserves a place in a museum along with the other antiquities, instead of fighting in the hard and dangerous struggle which is the very essence of modern existence.

By this it is not meant that there is no virtue in the old things. The germ of Truth never dies; it changes chameleon-like with every fashion, every period and every cycle. The old laws are ever true, but never static. We must never reject them, but must endeavor to discover their real relation to our own time and our own civilization.

Applying these ideas to the study of the art of singing, we find it divided from the earliest times, under several headings. Breathing, vowel and consonant formation (diction, enunciation, and so on), placement of tone (pose of the voice), control (Kehlfertigheit, velocite), intonation, interpretation (individuality, temperament) and musicianship. These things may be called by different names by different authors at different times, but a clearly defined idea of their necessity seems always to exist. For the sake of convenience they may be treated separately, but in the act of singing they all occur simultaneously and indivisibly. The sense of balance among these attributes of singing must never be forgotten. Not by breath alone can one sing well, nor by tone alone. One must hear the words, easily and clearly pronounced without interfering with the natural beauty of the voice, or the artist becomes a declaimer and not a singer. Individuality of interpretation is absolutely essential; but its exaggeration makes the singer ridiculous and subjects him to much criticism. Wagner dreamed not only of the "Singing Actor" but also of the "Singing Musician." The loveliest voice, the most musical and rhythmic delivery, the cleanest, purest enunciation, are all spoiled by false intonation, or as the man in the street says "a bad ear."

Invisible Breath Action

The singer must learn to control every graduation of air-pressure emitted from his lungs, so as to produce every gradation of tone from the softest *pianissimo* to the loudest *fortissimo,* without undue effort, without any trembling of the tone and without allowing his breath-actions to become prominently visible to his audience. Many books have been written to help him; but too often they are didactic, impractical and obscure. Nature after all is the only sure guide. Study her processes and do not depart from them, and you can never go wrong. A description of the natural acts of breathing may not be amiss here.

Inspiration

The diaphragm descends and in consequence the abdomen expands; the lower ribs expand also, and the upper chest rises gently and quietly, without any convulsive effort. At the last moment of the inspiration the diaphragm and abdomen contract slightly, so as to be ready for the expiration which follows immediately.

The chief difficulty in expiring is to prevent the breath from rushing out too quickly. The problem is to supply to the vocal cords just the amount of breath that is required and no more.

In the opinion of the writer, this is best obtained by preventing the weight of the chest from pressing on the lungs during expiration. Therefore the intercostal muscles hold the chest firmly raised during almost the entire exhalation, and the gentle contraction of the diaphragm and the abdominal muscles will supply the amount of air-pressure required. This method, which in the opinion of the writer is founded entirely on natural laws, will enable the singer to produce long phrases in one breath, and will give a control of both loud and soft effects impossible by any other. Breathing exercises, that is, special exercises designed to improve the strength and resilience of the whole series of breathing muscles, and to increase the size of the chest cavity and therefore of the lungs, are of the utmost importance to the singer. He is recommended to read some books upon the subject, select from them exercises which appeal to his special needs, and sedulously practice them. Swimming, fencing, rowing, tennis, golf, and other out-door games also will tend to keep him in that excellent physical condition which is of the utmost importance to the singer.

"Practice Vowels Softly"

The vowel is the vocal element in both speech and song; by it are determined the beauty, carrying power and resonance. It must flow freely out of an open throat into the mouth and through the lips into the air, unimpeded by any action of the throat, palate, fauces, jaw, tongue or lip muscles. In the production of the consonant, the free exit of the vowel is interfered with, by momentarily touching the tongue to the teeth, the roof of the mouth or to the palate, or in the production of M and N, by partly closing the mouth. See that the vowel or the consonant sounds are not produced in the throat; that they are not guttural, throaty, squeezed by the lips and the tongue, nor lacking in resonance from tightness of the soft palate and uvula. It is good to practice all the vowel sounds softly, taking great care that they are purely produced, well forward in the mouth and without any dialectic peculiarities.

MR. NICHOLAS DOUTY

All the vowel sounds should be used, not the most favorable ones alone (A as in father, A as in cat, A as in law, A as in hate, EE as in meet, I as in fight, I as in fit, O as in hop, O as in hope, OO as in too, U as in hue). These vowel sounds should be softly spoken and sung, but care should be taken that they are not weak or trembling, nor breathy, nor in any way impure. Then a consonant sound may be added first as a prefix and then as a suffix, taking care that the consonant be delicately pronounced with the least possible action of the speech muscles, without interfering with the tone. We may then proceed to sing simple phrases, and finally to sentences pronounced or sung in the same manner. All these exercises must be done rather softly and in the medium voice, avoiding both the highest and the lowest tones. Dialectic peculiarities which are so effective upon the vaudeville stage, must be sedulously avoided in all vocal practice. It should be remembered that the purer the vowel and the more easy the pronunciation of the consonant, the more beautiful the voice will be and the freer its emission.

Pose of the Voice

Personally, the word pose expresses more nearly the physical and mental conditions necessary for the emission of a beautiful tone than the word placement. One does not place the voice in the same sense that one places a dish on the table or an umbrella in the rack. The voice is not squirted here and there in the cavities of the mouth and nose, as water is squirted from the nozzle of a hose. Rather the whole body is put into such a position that the voice comes into the resonance chambers and from them out into the air, without friction, and without undue muscular effort anywhere. If this explanation be accepted, one can easily see how small a thing will upset the pose of the voice. A little too much nervousness, worry, lack of sleep, or a quarrel, and the voice of even a great artist will get out of place. Too great a pressure from the diaphragm, rigidity of the intercostal muscles, stiffening of the jaw, throat or tongue, and the correct pose vanishes until these strictures are removed. The voice loses its beauty and carrying power.

How then shall pose be taught? It is the business of the singing teacher to distinguish in the voices of his pupils, any interference with the free exit of the tone. He must be able to tell whether it be throaty, nasal, guttural, palatal or lacking in resonance, and from the impaired tone-quality to know just where the interference is, and be able to explain it and suggest a remedy. He must hear in the tone whether the intrinsic muscles of the larynx are performing their natural function of alternate contraction and relaxation unimpeded by any action of the muscles of the throat. It is this balance among all a man's physical and mental actions during the singing that produces the proper pose of his voice and the individual unique quality of tone which distinguishes his voice from that of any other man. One of the most common mistakes is to confuse resonance and pose. Resonance is sympathetic vibration occurring in various parts of the body, especially in the cavities of the mouth, nose and head. Pose is the result of the synchronous action of all the physical and mental attributes of a man's nature, producing the voice in the simplest, easiest, most natural manner.

Mr. Nicholas Douty, who conducts The Singer's Etude for this month, has had an unusual career in the field of Voice Teaching. In addition to the fact that he is a composer and an able musician who readily plays a symphonic score at sight, he has also wide renown as an Oratorio tenor. For over a quarter of a century he has been the tenor soloist at the Bethlehem Bach Festivals. His recent book, "What Every Vocal Student Should Know," with the appendix giving daily exercises for all voices (already humorously known as "Douty's Daily Dozen"), has met with splendid endorsement among leading voice teachers. His *Oratorio Repertoire*, four books, one each for Soprano, Contralto, Tenor and Bass, represents the last word in collections of this kind.

Velocity (Speed, Technic, Kehlfertigkeit)

Quite often the conventionally trained singer at the beginning, is made to sing a lot of vocalises, scales, fioriturі and so forth before his voice is well placed. This is a mistake. Pose of the voice is first a mental thing. It must be thoroughly understood mentally, before it is translated into physical action. No great attempt to obtain velocity should be made, until the student has a fairly well placed voice. There are many excellent books of vocalises, many time-tried treatises which give a synopsis of every exercise necessary to the perfection of vocal technic. It is not the place of this article to mention any of them. The well trained singing teacher will select from the mass of material available in any music house, the books and exercises that seem to him best fitted to the special needs of his individual pupils.

Intonation, Interpretation, Musicianship

A man with a truly musical nature seldom sings out of tune. The moment that his ear tells him he is out of tune his nervous reactions correct the error and bring him back to the correct pitch again. Unfortunately a great many singers have had a limited musical education. Seldom do they play the piano or any other musical instrument. They are taught to sing the melody; seldom do they listen to the harmony which accompanies it. Naturally they sing out of tune, because they do not listen to the other parts. As soon as they become better musicians, they begin to realize that the melody is but a part of the composition. As soon as they learn to listen to the accompaniment, whether it be by the piano, the organ or the orchestra, they gradually sing more true to the pitch.

There are two other classes of singers who sing out of tune as a result of faulty production, 1st, Lyric and Coloratura Sopranos with rather thin voices produced with the tongue raised high in the mouth, and who believe that resonance occurs only in the cavities of the head above the mouth. These ladies sing habitually sharp. It is only necessary to get them to free the tongue so that it may move with every syllable, and explain to them that resonance occurs in other parts of the body, to have them improve their intonation. 2nd, Singers with large, thick voices, be they contraltos, dramatic tenors, baritones or basses, who habitually sing with too much breath pressure, are sure to go flat, especially upon the higher tones. If they can be made to understand that a tone is the result of a sense of balance between the force of the breath and the resistance of the larynx, they will soon cease shouting and will gradually sing better in tune. Every singer should be forced to take a course in the rudiments of music. He should be able to play at least one instrument a little. Nor can he understand the structure of the music that he sings unless he knows something of harmony and a little about musical form. His ability to interpret is bound to be limited unless he understands one or two foreign languages. The history of music, its gradual development through the long centuries, must also be part of his study. How else will he be able to understand the difference in interpretation between an aria of Bach or Gluck and one of Verdi or Puccini; between a song of Beethoven or Schumann, and a song of Debussy, Schoenberg or Ravel? The time is past when a singer can rely entirely on his voice alone. Whether he be an operatic artist, a recitalist or a concert singer, he must learn to use his brains as well as his larynx. To make a success before the educated public which more and more forms the majority of American audiences, the singer must be an interpretative artist with a strong personality, capable of projecting over the footlights, not only the music, but also the meaning of the words and the dramatic situation.

Fashions in Singing

All the world knows that every year brings its change in the fashions for men's and, more especially, women's clothes. It occurs to few that music and singing have their changes and their fashions also. Thirty years ago the basso profundo was the voice most enjoyed. We were constantly regaled with "Rocked in the cradle of the deep," or we were assured that happiness alone was to be found "Deep in the Mine." Plancon and Eduard de Reszke were our idols; and we used to marvel at their trills on sonorous low tones. Soon afterwards came the fashion of the "Sword Songs" in which the lusty bases and baritones swung their trusty blades aloft, dripping with the blood of their enemies, or the innumerable "Stein Songs" very popular in "Stag" assemblies about 1:30 A. M.

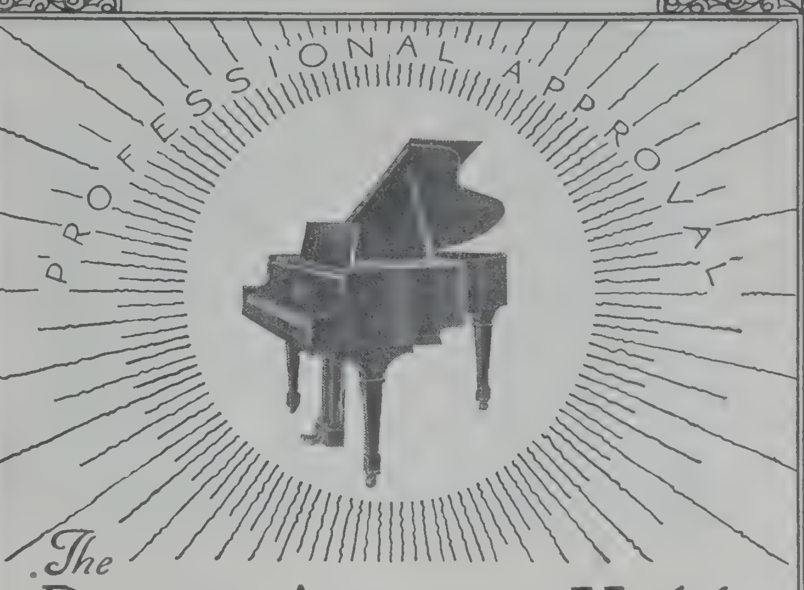
It would seem that "He Men" lived in all parts of the United States in those days, instead of in the "Great open spaces" alone. Our opera singers were men and women with great singing voices and they sang in what was then called "The grand style" the operas of Wagner, Verdi, Meyerbeer, Beethoven, and a little later, Puccini. Perhaps there was not the same attention paid to *mise en scene*, but Nordica, Eames, the de Reszkes, Lehmann, Kraus, Materna and their contemporaries were great singing artists, with voice, tradition, action and style.

The passage of time and the Volstead Act, and the strains and horrors of the great war changed all that. We no longer are allowed to celebrate the stein even in song; and we are too weary of war again to swing the sword, even in imagination. Our composers have evolved, to revive our jaded musical appetites, the calculated cacophonies of dissonance, the wriggling rhythms of "Jazz," and the silly sentimentalities of the "Heart Songs." A feeling of shock pervaded the nervous system of the whole country; and as a result, our sense of logic, form and reason in music was temporarily disturbed. We reacted only to the exciting and the exotic. All our basses tried to sing tenor; our contraltos became mezzo-sopranos; the most popular voice being a shrill coloratura soprano. But thank God all that is gradually changing back to normalcy. We hear once more the calm and stately tunes of Bach and Handel in our churches; Schumann, Schubert, Strauss, Brahms and César Franck appear upon the programs of our recitalists; the tremendous music of Wagner and Weber is given again in our opera and our concert halls. Good musicians have improved our jazz melodically, harmonically and orchestrally. The "Heart Song" has largely been relegated to the "Movie" and our singers are gradually returning to an appreciation of beauty of tone, control and interpretation, instead of forcing and hysteria. Good, pure, round, open-throated singing is coming back to its own again, and we can look forward to the future with hope and confidence.

"There is no royal road to perfect voice production, though all students seem to want one and many teachers profess to teach one."—Dudley Buck.

"Registers exist only when you sing wrongly."—Frantz Proschowsky.

"Nature is often ironical in the distribution of her gifts. She wraps a beautiful voice in a husk of indifference or laziness, and it lies there, buried. Or she seems to shut in behind the doors of a closed throat an intense desire to sing, and for lack of a little air it is smothered."—P. A. Dow.



The
Premier Aristocrat Model
Price $725
The Ideal Christmas Gift

Directors of Music of leading educational institutions have selected the Premier Baby Grand because of its inherent musical value.

The Premier Aristocrat Model—5 feet, 3 inches long—has a national reputation as America's Foremost Popular Priced Small Grand.

Appeals with equal force to the teacher, student, studio and conservatory.

Send for your copy of ***"The Magic of Music"***—illustrates and describes the varied Premier models and emphasizes the reasons for Premier dominance. Floor space diagram also forwarded on request.

Before selecting *any* Piano, be sure to hear the Premier at your dealer's, or write us and our representative will communicate with you.

Vocal Registers

"If we look into the cause of this difference of opinion, we find that some theorists will not accept any registers at all, while some physiologists are not even satisfied with three, but want to subdivide them into four or even five registers. Were we to concede that every different quality of sound in any one voice is entitled to the name of a register, we could indeed increase the number accordingly. The school of art, however, can accept only such formation of tone as produces an aesthetic and noble sound and cannot acknowledge any forced, unnatural chest tones as a distinct register any more than it could classify the throat and nasal tones as registers.

"Most breaks in the voice are the result of beginning exercises on the lowest tone and working upward.

"Voice culture today is a struggle with throat stiffness. The causes indicate the remedy. Foremost then, is dropping all throat consciousness, all thought of throat, all drawing attention to it. The larynx must be left uncramped, unhindered to do its work in free unconsciousness, which it will do if not disturbed by tension in its neighborhood, or misdirected thought."

—Oscar Saenger in *The Musician.*

A Cure for the Self-Conscious Singer

By Jean McMichael

The self-conscious singer will find it splendid practice to sing memorized selections to some member or friend of the family, away from the piano, without accompaniment.

No doubt, at first this will be a most embarrassing performance; but it is surprising how soon the student becomes quite at ease, accustoming herself to facing the listeners, at the same time making it possible for her audience to criticize any ungainly posture or other shortcoming. Also, it enables the singer to give full attention to the interpretation of the song, forgetting herself to such an extent that ere long she finds, to her astonishment, that she has become quite unconscious of her audience and is no longer a self-conscious performer.

The Mainspring of Art

By D. L. Ford

When "Parsifal" had met with colossal success at Bayreuth, Wagner was asked if he were not satisfied.

"Well, no," he replied. "I am never satisfied. As you know, no true artist ever is."

Never satisfied? What live man or woman could be while yet the strength remains to do better? Is anything quite so inspiring as the conscious feeling that one's feet are firmly planted on just a little higher level of attainments than when bearings were last taken? Earnest persistent effort pays its own dividends—and the rate is high.

An Interesting Paradox

By E. H. P.

It is but natural that people of different temperaments and different religious persuasions should have tastes as widely differing in the matter of music; but it is a curious fact, observed by some organists who in the course of their careers have ministered to congregations of several various denominations, that their taste in church music is often the very contrary of what one would be logically led to expect. Thus, the Methodists (at least theoretically, and often actually) frown on dancing and kindred forms of worldliness, yet in their hymns and anthems show a marked preference for gay dance-rhythms, especially the waltz, while the Episcopalians, who have the reputation of being rather inclined to worldly amusements, except in Lent, are most fastidious that their church music shall have a properly reverent and sacred character. Again, the Christian Scientists, whose optimism is a part of their religion, and whose hymns and church solos (they have no choirs) are carefully denuded of every sad or mournful element, nevertheless often enjoy keenly an organ voluntary of a very sombre cast, provided it is well played. The Roman Catholics, on their part, inculcate and observe the greatest reverence toward things sacred, including the church edifice and all connected with it, yet some twenty years ago the Pope felt constrained to publish a sharp admonition against the frivolous and secular character of their church music in many places.

It may be that music serves as a safety-valve to relieve wearied human nature from the pressure of some too-strongly-stressed type of emotion.

Over-Use of the Pedal

By Harold McCubbin

It is perfectly clear to the average pianist that if he plays his left hand way down in the sub-octave of the piano and his right hand high above, the results will be thin and unmusical.

Yet hundreds of organ players, particularly beginners, use the lower notes of the pedal board of the organ as though it was their religious duty to have them come booming out with nearly every chord. Possibly one of the reasons why the player does this is that his playing is swallowed up in the sound of the organ. If they could hear their own playing at a distance they would realize how extremely ugly are these heavy pedal tones widely separated from the treble parts they are playing upon the manuals. The upper notes of the pedal keyboard, nearer in pitch to the manual parts of the player, can be used with far more safety and beauty. Use the pedal notes artistically when they are really demanded.

Rossini's Wit Once Again

The hot-headed Rossini was conducting a rehearsal of his famous "Barber of Seville," in Paris. One of the clarinetists kept making mistake after mistake, which Rossini corrected with none too little patience. Finally he said, "Thank God, man, that you are my clarinetist instead of my barber, because if you were my barber and made so many mistakes my face would be mutilated for life." Next day the player got a new job.

Pianologues

The clever pianologue merits a place on every entertainment program. For either platform or parlor use, we especially recommend the following as readings or as vocal solos:

Dreamin' in de Twilight . . . . . . (Negro)
Hats . . . . (Humorous)
Keep a Smilin' . . . . (Inspirational)
The Ladies' Aid . . . . (Humorous)
The Lady Who Lives Next Door . (Humorous)
A Perfect Little Lady . (Humorous juvenile)
Speak for Yureself, Yohn . . . . (Swede dial.)
The Story of a Song . . . . . . (Dramatic)
Tony On Da Phone . . . . (Italian dial.)
The Youngest in the Family (Humorous juvenile)

In full sheet music form—price, postpaid, each, **35c.** The set of ten "Etude 1925 Collection," **$3.00.** Complete list of entertainment material on request.

As a means of contributing to the development of interest in opera, for many years Mr. James Francis Cooke, editor of "The Etude," has prepared, gratuitously, program notes for the production given in Philadelphia by The Metropolitan Opera Company of New York. These have been reprinted extensively in programs and periodicals at home and abroad. Believing that our readers may have a desire to be refreshed or informed upon certain aspects of the popular grand operas, these historical and interpretative notes on several of them will be reproduced in "The Etude." The opera stories have been written by Edward Ellsworth Hipsher, assistant editor.

"L'Oracolo" and "L'Amico Fritz"

FOUR works by modern Italian composers seem to have stood the test of time in the repertoire of short operas of serious intent. Mascagni's "Cavalleria Rusticana," Leoncavallo's "Pagliacci," Leoni's "L'Oracolo" and Wolf-Ferrari's "Il Segretto di Susanna" form this quartet; but to them probably should be added Puccini's "Gianni Schicchi," if it were not grouped with two other important short works by Puccini which are less popular in appeal.

In Europe "L'Amico Fritz" is frequently heard and stands next to "Cavalleria Rusticana" in popularity among Mascagni's works. Mascagni's father was a baker who wanted his son to become a lawyer. Like Handel, Mascagni gained his acquaintance with the keyboard by stealth. Later he attended a music school; and when his father discovered this he imprisoned him in the house as a punishment. The youth was determined to become a musician; and, despite cruel poverty, he triumphed with the first performance of "Cavalleria," in 1890. "L'Amico Fritz" ("Friend Fritz") is a far more agreeable work than the gloomy Sicilian tragedy with which Mascagni won his first success. The text, of course, is taken from the well-known story of Erckmann-Chatrian. It is interesting to note that the work was first given in America by Gustave Heinrichs, in Philadelphia, June 8, 1892. In New York it was given at the Metropolitan Opera House, in 1904, with Calve as *Suzel.* The most fascinating number in the opera is the famous duet of the cherries, in act second, in which *Suzel* throws the ripe fruit down to *Friend Fritz.*

Mascagni visited America in 1902, with a "scratch" company, which resulted in financial losses and artistic shortcomings which the composer would doubtless be glad to forget. At that time he gave "Zanetto," "Iris" and "Cavalleria Rusticana," omitting from his repertoire the popular "L'Amico Fritz."

Franco Leoni, composer of the opera, "L'Oracolo," was born in Milan, October 24, 1864. He was a pupil of Dominiceti and Ponchielli at the Milan Conservatory. In 1892 he removed to London and has since lived in the British metropolis. Of his four best-known operas, only one has proven a very great success, "L'Oracolo," the story of which was taken from an American playlet known as *The Cat and the Cherub,* by Chester Baily Fernald, who had been a newspaperman in San Francisco, and who based his playlet upon one of his short stories, published, if the writer remembers rightly, in the Century Magazine. The playlet was first given in Hammerstein's Olympia Theatre, New York, as a part of a vaudeville performance, and it created a great sensation. It was also given later in London with success. The opera was first produced in London in 1905, and in New York in 1915.

The Story of "L'Amico Fritz"

Act 1. Dining Room of the Alsatian home of *Fritz Kobus.* *Fritz,* an inveterate bachelor, is chided by his friend, the *Rabbi David,* for his celibacy. As he supplies the dowry for the marriage of a pair of *David's* young friends, admirers of *Fritz* enter to offer birthday congratulations. *Suzel,* the beautiful daughter of one of *Fritz's* tenants comes with a gift of violets. Following *Suzel's* exit, in heated argument with his friends, *Fritz* wagers his vineyard to *Rabbi David,* that he will not marry.

Act II. Courtyard of the Farm at Mésanges. *Suzel* gathers a nosegay as she sings of the cavalier and his lady who shall wear it. *Fritz* enters and a short colloquy ensues, after which *Rabbi David* manages alternately to fan the sparks of passion in both *Fritz* and *Suzel.*

Act III. Same scene as Act I. *Fritz* is haunted by the image of *Suzel.* His friend, *Beppe,* tries to console and cheer him. With *Beppe's* departure, *Fritz* apostrophizes Love, in which he is interrupted by *David,* who only inflames his ardor by cunningly telling *Fritz* that *Suzel's* father is coming for his approval of her marriage. His feelings are still more perturbed when, left alone with *Suzel,* she confesses her love for him, at which *Fritz* relinquishes his bachelor vows, admits his reciprocal affection, and surrenders the vineyard to *David,* which the good *Rabbi* in turn bestows upon *Suzel* as a bridal dower; and the curtain falls with all rejoicing.

The Story of "L'Oracolo"

An opera in one act. The scene is the Chinatown of San Francisco. The peculiar name of the opera is derived from the prophetic faculties of *Win-Shee,* the sage.

Chim-Fen, proprietor of an opium den, has tried vainly to win as his wife the charming *Ah-Joe,* niece of a thriving merchant, *Hu-Tsin.* *Ah-Joe* loves *San-Lui,* son of *Win-Shee,* which he reciprocates. Early on *New Year's* morn they meet and tell each other of their love. *Hu-Tsin* visits *Win-Shee,* seeking knowledge of the future of his son, *Hu-Chee,* for whom the sage foretells tragedy. *Hu-Chee* is soon kidnapped by *Chim-Fen* and hidden in his opium den. He then asks of *Hu-Tsin* the hand of *Ah-Joe* in marriage, provided he can restore his son. *Hu-Tsin* agrees, also making the same agreement with *San-Lui.* *San-Lui,* suspicious of *Chim-Fen,* enters the den, finds *Hu-Chee,* and brings him out. *Chim-Fen* follows, kills *San-Lui* and again hides *Hu-Chee.* The cries of the dying *San-Lui* are heard and a crowd assembles. At the sight of her dead lover, *Ah-Joe* becomes demented. *Win-Shee,* maddened by the fate of his son, strangles *Chim-Fen* as the guilty one. A guard approaches, *Win-Shee* props up the dead *Chim-Fen* and appears to be in conversaton with the dead merchant as the guard passes. *Win-Shee* calmly shuffles away, while the corpse falls with a thud to the floor.

Weaver—the choice of many masters

The spirit gaily calls, and willing keys respond; comes sorrow with its sombre tread, and love, with fiery passion—player and instrument unite to give them life and feeling. Because it complements the master, instead of merely serving him, great musicians acclaim the Weaver Piano one of the supreme musical achievements of the age.

To understand this perfect instrument you must hear it, play it, feel its magic spell. Let us direct you to the nearest Weaver dealer. Weaver Piano Co., Inc., York, Pa. Weaver, York and Livingston Pianos and Player Pianos.

JOHN MARTIN'S MELODY BLOCKS

Save tears and drudgery of music lessons

AN EDUCATIONAL TOY ENDORSED BY MUSIC TEACHERS

MELODY Blocks are neither a system nor a method of teaching music but an adaptable supplementary help. They are blocks with which the child learns to build melodies just as he learns to spell with alphabet blocks. Melody Blocks teach the elements of musical notation from note positions and note values to the building of simple airs.

MELODY BLOCKS solve such problems as: (1) Location of tones on the keyboard, (2) Location of pitch names of tones on the staff, (3) Relation between keyboard and staff, (4) Notation of meters and rhythms, (5) Problems of pitch, rhythm and meter.

DESCRIPTION—Briefly there are 120 blocks, the width of a piano key and ⅝" thick, with signatures, time indications, notes and rests of different denominations—every symbol you need in building melodies. Packed in a gay box with the Melody Instruction Book, they make an attractive and worth-while Christmas gift. Price, $2 60, postpaid

JOHN MARTIN'S BOOK HOUSE, 33 West 49th St., New York, N. Y.

Teachers—let me give you a regular 30c size tube of Kondon's— H.V.Kenyon

✓ We want school teachers to know and value Kondon's and to advise this healthy habit to their boys and girls. 3100 teachers accepted this offer last season	✓ Keep nose and head clear with Kondon's. It prevents infection, colds and catarrh. Just as important as cleaning the teeth.
✓ Send the names of 20 or more parents of your pupils. We will send you, not a sample, but a regular size 30c tube of Kondon's.	✓ Clip this ad. Mail it at once with the 20 or more names and addresses to Kondon Mfg. Co. Minneapolis, Minn.

Take these four steps for pupils' health

The Organist's Etude

It is the Ambition of THE ETUDE to make this Organ Department "An Organist's Magazine Complete in Itself"

Edited for December by J. LAWRENCE ERB

Former President of the Music Teachers' National Association

Things Every Organist Should Know

By J. Lawrence Erb

IN every organist's "kit-bag" should be a knowledge of how to improvise a short Interlude or to make an extended Modulation, using in each case thematic material derived from what has gone before or what is to follow or both. This necessitates a working knowledge of harmony and the elements of form; of harmony in order to recognize key-relationships at a glance and to construct and connect chord-sequences; of form, in order to break up a melody into its component parts and apply to those parts the simple principles of repetition, contrast, inversion, and the other commonplaces of the composer's technique. There is nothing more fascinating than *thematic* improvisation (which is the only true improvisation); and many a time it can be employed to save a situation or to give continuity or finish to the service. It can and should be practiced until a reasonable degree of fluency is acquired. Too much improvising can become a weariness to the flesh; but not enough may be desolation and despair.

How to Transpose

Even in this day of standardization there is still a considerable variation in pitch among instruments; though as compared with conditions in the time of Bach and Händel present variations are negligible. Voices, too, vary widely in their effective ranges, and the same voice undergoes temporary changes in this regard. The organist should be able to transpose at sight anything as simple as a hymn-tune, an easy anthem or solo-accompaniment, at least to the extent of a half or whole-step up or down. Orchestral musicians do this without a thought. Not always does the prima-donna sing a bell-like high-C when the score calls for it. The members of the orchestra are able to transpose, and that ability is often utilized to the advantage of singers who are temporarily indisposed or "in poor voice." The organist needs the same ability for the same reasons. Moreover in choir-accompanying, the effect may often be saved by judicious and inconspicuous transposition. To acquire the ability to transpose is so easy and so much a matter of practice that it is surprising to find so few who transpose with facility and certainty. Fifteen minutes a day of practice continued for a few weeks will enable any person to transpose any ordinary hymn-tune into any key within the whole-tone range, provided he has been able at the beginning to play the hymn-tune correctly at sight in the original key. Of course it is difficult to see how anyone can transpose well without a good rudimentary knowledge of Harmony; for the most important qualification in transposition is the ability to *think ahead* in the new key and this of course involves an intimate knowledge of keys.

How to Read From the Vocal Score

The experienced organist reads from the four-part vocal score as a matter of habit. It would be difficult to conduct choir rehearsals without this qualification. But the young organist finds this not so easy and has been known even to "fake" a vocal score that had been placed before him. Music-reading of any kind is largely a matter of practice. In learning to read from the open score, the first requisite is to keep the melody going though all else be neglected. Next in importance is the bass; then the inner voices may be added, one at a time, until the whole score can be accurately read, correct in time. However, in all reading practice, care must be taken not to go over any part so many times that it has been memorized. In many cases memorizing is the foe both of reading and of improvising. As a matter of sheer utility, reading is worth much more than memorizing, speaking from the standpoint of musicianship rather than of virtuosity.

The organ is a complicated machine and as such holds a great fascination for many whose interest might otherwise be mild. Like the boy who takes the clock apart to see what makes the wheels go round, many an organist likes to tinker with his instrument to see what he can do with it. While such tinkering has undoubtedly helped to face many a crisis, it is a question how far an organist should go in this direction. Undoubtedly it is an advantage in a small town, where the organ tuner's visits are angelic in their infrequency, to know enough of acoustics and organ mechanics to make minor adjustments without which the use of the instrument might be lost at some critical stage in a service. Yet, one is constrained to compare the pianist's attitude with the organist's in this regard. The pianist rarely if ever attempts to tune his instrument, to regulate its action or to make repairs. He leaves those things to the tuner whose business it is to attend to them.

Call an Expert

The organist, too often, dealing with a far more sensitive and intricate instrument, tries to give it attention which properly calls for the services of an expert. External matters, like rattles and other results of sympathetic vibration, require no expert knowledge. Moreover, bearing in mind the lack of foresight on the part of church committees, it *may* be well for the organist to know how to tune a pipe or stop a cipher. But for even this knowledge he may pay a high price; for the more he is willing to give free *in*expert service, the harder he will find it to convince his employers of the necessity for expert services. Because of their lack of knowledge and their desire to save money for the church, they will accept his poor substitute instead of paying for services of a professional tuner. The congregation should, as a matter of course, have an arrangement for the care of the instrument by proper persons. The organist is doing nobody a kindness, least of all himself, by giving the congregation an excuse for evading this plain duty.

Meddling Organists

As for making specifications for the tonal resources and console arrangement of the instrument, much meddling on the part of organists has justified many a poor job on the part of the builder. It is entirely correct to indicate which of various alternatives one prefers or to ask for improvements where the action or the console arrangements are inadequate, or to express a preference in the matter of voicing. These all pertain to the *performer's resources,* and are subject to his criticism and approval. But it is a safe rule, subject to few exceptions, that the organist should confine his activities to *playing* the instrument and leave the construction and care to experts who specialize in these matters as he does in playing.

If I were one of those who believe in legislating enactments to cure all human ills, one of the enactments for which I could work whole-heartedly would be to make the study of singing, particularly vocal culture, obligatory for all. But, being an opponent rather than an advocate of virtue-by-law, my efforts would be directed toward the strategic points, in the hope of helping to bring about the desired result by agitation and moral suasion. Surely one of the strategic points is the choir-loft.

To our Occidental ears, the singing of the Orientals is most unmusical. No doubt to them it is the height of beauty. So, to *our* accustomed ears many things seem beautiful which are unlovely. Not to complicate the issue by discussion of the raucous, irritating speaking-voice which is common to us as a people, the matter must at least be referred to as the only logical explanation of our bad singing habits. Blessed with a plenitude of good natural voices, we do not know or seriously care how to use them beautifully. Our young, still-unspoiled voices often sound extremely well in ensembles, but they do not last long. So we witness the common spectacle of a dearth of *mature* voices in our choruses, except where some of a former generation have escaped the blight and persist to save the choir-master and choral-director from utter despair. In the chorus-choir, especially the volunteer chorus, experience adds vastly to the value of the singer; so the lack of experienced singers whose voices are still *fit to listen to,* is a serious matter.

Study the Voice

It is not too much to expect that every organist who intends to engage seriously in choir-directing should study singing and voice-building under a competent master for at least two years. He should himself be able to produce good tones, and to know *how* he does it; so that he can tell others how. He should be able to sing acceptably any vocal composition that lies within his range and type of voice. He should understand phrasing and breath-control, vocal interpretation and the manner of producing effects. He should know how to impart these matters, at least well enough to be able to produce good, healthy musical tone in his choir, individually and collectively, and to interpret choral-music *vocally,* not instrumentally.

There comes to mind a glee club recently heard in concert. This club has received much publicity because of its interpretations. But if any vocal pupil of mine were in danger of becoming a member of that club, every legitimate effort would be used to dissuade him; for the entire conception of the organization, so far as one can judge from hearing it, is instrumental—orchestral—not vocal. The tone is choked and unnatural, lacking spontaneity—under complete control, indeed, but the control of the strait-jacket. After listening to this concert, *my throat ached* in sympathy with those maltreated throats, especially of the tenors.

A man might be a genius as an orchestral conductor, but utterly deadly in leading voices. The limitations of choral-leaders have been frequently discussed and are frankly admitted, particularly when they come to direct a professional orchestra. But the orchestral conductor seems to admit fewer limitations. No man has any business handling voices in any capacity which involves the tone quality without having acquired a sufficient acquaintance with vocal-hygiene so that he at least *knows* what is good and what is bad and how to avoid the latter and attain the former. There is nothing more beautiful in music than a fine chorus; but not every person that waves a stick or plays an organ is qualified to conduct one. Certainly those who desire to be so qualified should *play fair* and learn enough about singing to be safe leaders.

The Man in the Pew

THE organist naturally judges his work largely from the standpoint of the effect which he is striving to produce. The Man in the Pew is interested primarily in what he hears. In business, one of the most important problems is to sense the public mind, so that goods may be manufactured and sold to meet the demand. Some of the energy is devoted to creating a demand for untried articles, but this is rather the speculative element in the business. Most business supplies demand or stimulates rather than creates it.

To what extent the organist applies business principles and methods to his work would depend a great deal upon the individual; but it would be a pretty safe guess that with him the order is usually reversed; that is, first, he tries to create a demand for what he wants to sell, and only by accident studies to supply the demands of the customer, the Man in the Pew. Possibly the business point of view is not the proper one in this connection, yet it can do no harm to consider the Man in the Pew, in the light of a possible buyer. The Man in the Pew is a decidedly variable quantity. We are repeatedly warned that there is no such animal as the average man, for each man is an individual personality. When artists and others talk about the public taste, they are really registering their own impressions of how the public likes what they have to offer. It is extremely easy to find fault with the public when it does not support our efforts; just as easy as to praise it when we win honor or fame or fortune. Taken all in all, any except the sophisticated audiences of our few music-centers are composed of a large proportion of those who frankly confess themselves "Musical Low-Brows." In our churches, especially, which do not at present attract any great number of the self-styled "Intelligentsia," the Low-Brow is much in evidence.

The Low-Brow "likes what he likes," whether in sermons or clothes or music, and is moved by what he likes and mildly bored by all else. He is not particularly impressed by what he *ought* to know. His is not the scholar's ambition to erudition nor the artist's to perfection. In the main he has a pretty healthy sense of fitness, and you can count on him to stand for the right thing so far as he knows it. (No. I have not read either "Main Street" or "Babbitt," so I feel under no necessity to agree or disagree with Mr. Lewis' ideas.) The Low-Brow's greatest fault is a certain contentedness with his point of view—in which regard he differs not only from the

High-Brow—and this makes him somewhat unwilling to submit to educational experiments. He does not want to be "uplifted;" and if you change his point of view, it is more easily done by strategy than by collision.

Musically speaking, there is nothing which this Low-Brow Man in the Pew likes better than a Tune. Which is only another way of saying that he likes ideas rather than impressions, the concrete better than the abstract, the definite rather than the nebulous. He will almost purr like a cat having its back stroked when a familiar melody strikes his consciousness. An unfamiliar one of sufficient simplicity pleases him almost as much; for, while he dislikes to *work* over his (mental) enjoyments, he is not averse to novelty, so long as it has a familiar ring.

He is a patient creature, this Man in the Pew, willing to sit for many minutes at a time through (to him) absolutely meaningless sounds which affect him like the gibberish of an unknown tongue, if he is only to get his occasional reward in something that to him makes sense. I remember vividly the case of a good old soul who, almost with tears in his eyes asked me after a particularly stirring performance of the "Messiah," "Tell me truly, *was* that beautiful?" He had waited patiently for two hours or more for an idea which to him made sense, and, impressed with the enthusiasm of the audience, had at last come to wonder whether the fault lay (as it did in part) with himself His musical experience and education had included nothing that would make intelligible to him the sublime thoughts of Handel, so there was nothing of beauty in the great masterpiece.

On the whole, the Man in the Pew cares little or nothing for "stunts." Technical display is often entirely over the heads of the laity; or, where it makes an impression, the impression is not necessarily in proportion to the value or difficulty of the "stunt." The Man in the Pew, who knows little or nothing of the mechanics of music, is either unmoved, or may be moved by something of superficial effect and pass by in ignorance that which really counts. The fault is not his, for he lacks the acquaintance (and why should he have it?) with the special technics of the various instruments which would enable him to appreciate when a thing is masterly or when it is simply "effective" or even cheap.

So, speaking on behalf of the Man in the Pew and in the interests of a better understanding between him and the Organist or other serious performer, I would suggest as a first step a return to simplicity so far as possible. Not everything good is abstract; nor is everything involved and difficult good. It is not uncommon, for instance, to hear a Choir wrestling with an anthem which is technically far beyond its powers but musically beneath contempt. One is reminded of "Home, Sweet Home," or "Sweet Bye and Bye" with Variations, which plunged the performer into difficulties far beyond his depth; but which from an artistic point of view were neither worth playing nor listening to. Better a good Hymn-tune well sung than an anthem garbled, but better yet an anthem which inspires by its simplicity rather than attempts to awe by its difficulty. As a matter of worship (therefore of fitness) the advantage is usually with the simpler composition. It makes no difference that in the Cathedral they sing complicated anthems and Services (which, with their expert performers, and their impersonal atmosphere, are entirely in place), in the modest Chapel or Parish Church, the conditions are different and demand a treatment that fits the case.

To return to the commercial metaphor, the Man in the Pew is a potential customer. He must be attracted and satisfied. His confidence having once been won, it is possible to interest him in new lines of goods, in that way creating a new market. The Organist who uses the salesman's methods so far as they are applicable, studies his audience to find what creates a favorable response. He "makes himself solid" with his customers by giving them what they want, so far as he, as a Church Organist "has it in stock." Of course a dry goods salesman is not expected to sell hardware; the days of the old-fashioned peddler, who carries in his pack everything portable from a needle on up are gone. Of course in business there is the Department store; but fortunately for the musical profession, the parallel ends there, for it has nothing yet to correspond. We have not yet evolved any agency which offers to produce every kind of musical performance from dance-music and vaudeville to symphony and Grand Opera. As matters stand, the Church Organist is not called upon to "carry" secular "goods;" so, having established friendly relations with his "trade," it is possible for him to branch out, developing new "lines," involving the educational element, elevating the taste, creating new agencies, such as Organ Recitals, Choral Societies, Orchestras and Glee-clubs, and in general making himself indispensable to the Congregation, which, after a while, will wonder how it ever got on before without all the comforts and conveniences which the tactful and astute Organist has made necessary to them.

What Organists Say

"Any organist who has the gift of sociability may learn as much as he cares to know about all phases of his art."

—Hamilton C. Macdougall.

"If an anthem goes well with your choir, difficulty of execution should not be considered at all, nor should simplicity be held a fault."—Harold W. Thompson.

Need of a Church Organist in a Small Community

By Mrs. Bruce S. Keaton

1. He needs a fine modern organ. To procure such an instrument may seem an impossibility to him, and to many of the church people who are, perhaps, satisfied with their present organ—who naturally wonder how the large amount of money necessary can be raised and how the delicate instrument can be kept in tune and n repair so far from the centers.

But with patience and quiet determinaion it is possible to overcome all objecions and to secure the needed treasure. We know of an organist who worked for ix years before he persuaded his congregation to make the experiment; and even then, as the last pipes of the old tracker-action organ were being carried out of the church, a prominent member remarked "It is too bad! We shall never have as good an organ as this old instrument." However, suffice it to say, when the new four-manual was installed, everyone was delighted—so much so that when after seven years of service it burned with the church building, the entire amount needed to replace it was subscribed before the plans for the new building were completed!

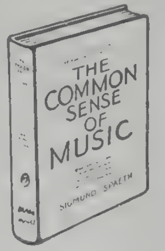
Why do they have to "*drag*" people to concerts?

Why do people say about good music "*it's beyond me*"?

Because hundreds of thousands are ***ashamed*** of the music they enjoy; hundreds of thousands are ***afraid*** of the music of the masters; hundreds of thousands have the pathetically false conviction that music is for the few.

There was a crying need for somebody to apply common sense to the situation; to sweep away the mists of misunderstanding; to let people know that they have in themselves the basis for enjoying all music. It's done in

THE COMMON SENSE OF MUSIC—by Sigmund Spaeth



THE COMMON SENSE OF MUSIC
SIGMUND SPAETH

It has already inspired thousands. It is a book that has revealed new things about music to professionals and more about the psychology of the layman in his approach to music than anything in years.

Mr. Spaeth was ideally fitted for the writing of this book. He is a lecturer at New York University, has addressed audiences throughout the country and knows the musical fears, aspirations and loves of the average man and woman.

Read this book, recommend it, mark it up—you will enjoy the reading, you will enjoy music the more for it, and ***if you play or teach music you will find it invaluable in opening up to you the hidden minds of your audience and your pupils.***

AUSTIN ORGANS

Recent contracts show many other large Austin organs demanded from far west, middle west, the far south and the east. Morristown, N. J., is to have another big Austin, companion to the one in St. Peter's church. Our product could not be so widely distributed without assurance that the product has stood the severest tests of mechanical and tonal quality.

NEW—HOLIDAY NUMBER—NEW
"THE BIRTHNIGHT"
(*Organ Number*)
Lovingly dedicated to our Mothers
Price $1.10
Published by Mrs. J. V. Fehn, Lincoln, Ill.

SUMMY'S CORNER

Make your Christmas Service notable. The use of either of the following numbers will achieve that result.

THE BIRTH OF THE MESSIAH . . . . . $.50
Cantata for Solo Voices and Chorus by W. D. Armstrong

A number that meets the requirements of the average choir desiring an effective cantata of moderate difficulty. Well written, with simple solos capable of expressive rendering, choruses reflecting joyous worship and Scriptural recitatives.

THE BIRTH OF LOVE 60
Words by Mary Louise Dawson with Scriptural passages
Music by William Lester

A somewhat more elaborate selection, and of the list of Christmas Cantatas which will bear hearing many times. It is festal, and at the same time reverent. It gives the choir the complete satisfaction of doing something worth while and of giving distinct enjoyment to the congregation.

THE ROLLING SEASONS
A Sacred Cantata by Caleb Simper
Price $.75

A popular cantata that is a valuable addition to any church program. Its melodies possess dignity and fine churchly character.

2. The organist in a small community needs the assistance of great organists in giving his public recitals. This for his own sake, and for the sake of the community in which he lives. He may, himself, be a first-class artist; but "variety is the spice of life," and with a fine up-to-date organ in his town the people are entitled to hear as many as possible of the leading organists of the day, whose very presence in the town will be an inspiration and whose organ playing will be a great help in raising the standard of music in that locality. And how will such visitations affect the country organist himself? He may take frequent trips to the city for recreation and study—and he should do this always—but to have association with these distinguished artists in his own town at his own organ, as his guests, is indeed a privilege the value of which cannot be estimated.

3. He needs, even more than does a city organist, the esteem and co-operation of his pastor and the church members. Here we tread on sacred ground! Every organist knows how absolutely necessary to good results is a congenial and sympathetic relationship in this department of his work. We bless in our hearts forevermore the ministers who have understood us and who have allowed us to work with them in perfect accord.

4. He needs to keep in touch with town matters—to be ready to help in the public schools, choral societies and orchestras, and in giving explanatory organ recitals for children. He needs association with the other organists in his town. Fellow workers in so noble a field, their acquaintance and friendship should be cultivated. Meetings should be held once a month in the different churches, to compare notes as to methods of work, to discuss current musical events—to "play a little, sing a little and have a cup o' tea." These things strengthen the tie that binds, and give cheer and courage to the overworked and disheartened ones. There are many organists—real heroes—in small communities, whose work is "uphill all the way." Not long ago a letter was received by the writer of this article from an organist who "wondered if the leader of a volunteer choir could ever hope to enter the Kingdom!"

And this brings us to the final need—the crying need of a country organist—and that is a paid choir. The volunteers are splendid in many instances, and surely their services are greatly appreciated, but every organist needs and should have some paid singers who will always be present. We imagine the above quoted organist had found himself that Sunday morning with a small choir—most of the members "sleeping over," or playing golf, or riding in automobiles, little thinking about the bitter disappointment of the organist, who, judging from the rehearsal of the evening before, had every right to expect a full choir to render the somewhat elaborate program prepared.

Thus it is, very often, with the organist in a small community, and he wonders sometimes why he keeps on. But oh! the compelling tones of the organ. And oh! the longing to amount to something in this brief life of ours! "Are these worth nothing more than the hands they make weary? Hush! The sevenfold heavens to the voice of the Spirit echo: 'He that overcometh shall all things inherit.'"

—*The Diapason.*

The First Acquaintance with the Pedals

By George Henry Howard

Conceptive study is a most indispensable feature of all training in pedal instruction.

A very practical direction at the beginning might be, "Shut your eyes, *keep* them shut and *explore.*"

That is, the first acquaintance with the pedals may well be made with closed eyes, while *exploring* the pedal board slowly with the point of the foot, naming each key as it is touched.

(*All pedal exercises should be played for three months without looking at feet or pedals,* except as sometimes directed by the teacher.)

Next, particular keys may be called for by some such routine as the following:

"Realize mentally (eyes still closed) that middle C of the pedals is between two black keys, B flat and C sharp; place the toe, right foot, in that space; then draw it back a little and toward the right so as to find C. *Realize* it fully without opening the eyes."

Repeat many times.

Find other keys by similar processes, always with eyes closed and always gaining the conception of the location.

Such a conception of location (never depending on seeing, but always depending, instead, on exact thinking and feeling) insures great certainty and, finally, after a few months, the greatest facility.

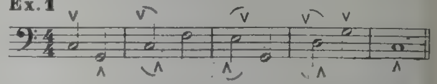
Adjustment of Feet to the Pedal

Exact adjustment needs prompt notice, feet (singly) being placed on white keys and accurately spaced so as never to be in danger of touching an adjoining key.

Then single keys may be played without tone for observing the ankle-joint movement and the touch.

Then the following exercise for learning the legato tone succession by shifting the feet on the pedal-key:

Ex. 1



Training for Listening to Pedal Tones

The student should learn to listen closely to the successions of pedal tones. The first tone should accurately *meet* the second tone, but cease instantly as the second is heard. This produces the legato touch, for which musical sense as well as the feet must be carefully disciplined from the beginning.

The following exercises may next be used, each exercise being prepared for by exact placing of the feet silently, without looking at the pedals. These simple exercises may be dictated to the pupil. He should thus learn to judge of his precision in locating the feet, by mental perception and not by looking.

Timely Letters from Etude Friends

Another "Glasses" Case

TO THE ETUDE:

In THE ETUDE for last August appears an article entitled "Glasses," giving one teacher's experience with a careless pupil in reading music.

The writer has in mind a similar case, just probably a little more amusing. This teacher's pupil was told week after week to take everything slowly; to look out for half notes, rests, and so on; to look ahead while playing, think of the time; in other words, to see that his reading was correct.

In spite of all this, the pupil would disregard almost everything told him, and probably played as many wrong notes as right ones.

He did not improve; so one day this teacher said:

"Walter, I think you need glasses. Probably you wouldn't play so many wrong notes."

Walter looked serious—and the next time he came for a lesson, lo and behold! he wore a pair of glasses! The teacher could hardly keep from laughing. He tried to keep a straight face, and asked Walter to begin his lesson by playing a Lambert study.

After playing a few lines, Walter quickly pulled the glasses from his nose as though they were hot. The teacher, trying to appear surprised, said: "Why, Walter, what is the matter with the glasses?"

His quick reply was, "They bewilder me."

Can you imagine anything more foolish than to wear glasses that do not fit your eyes? The trouble was, he did not need glasses. What he really required was to think of the word *Care* while practicing.

NELSON J. NEWHARD.

Let Mothers Help

TO THE ETUDE:

It is interesting to note the readiness with which mothers will renew their acquaintance with the piano when urged ever so little, so as to work along with their children.

A large percentage of married women who formerly studied piano give up definite practice as household interests become engrossing. They invariably regret this neglect when small sons and daughters begin to study piano and need someone to help them at home. Much careless practice would be done away with if mothers were able to correct mistakes and advise their children as to tempo, expression, fingering and hand position, during their practice hour. A few lessons may help mother as well as give her pleasure.

One interested pupil-mother had never had definite instruction in the use of the pedals. Jessie L. Gaynor's book of pedal studies gave her very clear ideas on the use of the damper pedal; and, when her little girl had a bit of troublesome pedalling on her new piece, the child was surprised, and oddly respectful, when she discovered that mother could set her right.

Children love to do what the grown-ups do; and, if it happens to be something very much worth while, like practicing, then so much the better. Much can be done in the matter of ear training at home. Let the mother first play a simple melody, and have the child write it on her music pad; then see how delighted the child will be, if permitted to play a "tune" for mother to write. Make the study of music not something outside of home interests, not a dreaded task to be got through with, but something everybody at home is interested in—a subject to be investigated, understood and enjoyed.

NELL V. MELLICHAMP.

Why So Many American Children Dislike Music

TO THE ETUDE:

Average American children dislike music because they have not been taught to love it, but to regard musical practice as a demon who steals their playtime. Every child, I think, should learn to play some musical instrument. Surely there is some way to make children love music.

I remember once when my grandma came to visit. The first thing she did was to send for me and ask me to play. I had just finished my practicing and had been dismissed for play.

As I sat down to play my exercises I don't know what happened, but all my musical talent, if there was any, slipped right out of me. My teacher finally called my mother and said that I might as well stop taking lessons for I could learn no more. Now I wish I had gone on, for many is the time music has helped people over the rough spots in life.

The music taught in schools helps some children, but that music does not reach every child.

Also there is jazz. No one really loves jazz, though many profess so to do; for in it there is no real substance on which the affections may cling.

PATTY LIGHTON.

Standing Alone

TO THE ETUDE:

In the days of my youth I was surrounded by musical assistants. My father first, then a very gifted elder brother, later choir masters, instructors of various musical societies to which I belonged, and private tutors. I listened to good music, heard musical criticism, and in fact lived in an atmosphere of musical ideals.

I appreciated my position. I learned from all sources—they fed my soul.

Then I came West.

For a time I was where I could hear good music fairly frequently, and take part in musical affairs of a high character. Then circumstances altered, and I found myself alone in an unmusical world, with just a piano and my stock of musical papers to keep me in touch with certain memories.

After several years alone, devoid of all the previous musical assistants of early life, I have lately had my eyes opened to the errors I now make, or rather did.

When the discovery came it made me miserable; but soon I determined to "pull up," and keep my eyes open for the pitfalls into which I had fallen since protection was removed from me.

My object in writing of my experience is to warn students to bear in mind where they are likely to go astray in musical technicalities; to learn all they can while they can, and to learn to stand alone.

ADA NICHOLS.

The "Missed Lesson" Evil

TO THE ETUDE:

I suspect that teachers all over the country are troubled with the evil of the missed music lesson.

Mary Jane, and often her parent, says, "It doesn't matter if a lesson is missed once in a while." They do not consider that the teacher must be there always, whether the pupil comes or not.

What can be done to end this unnecessary evil?

I live in a comparatively small community and have between thirty and thirty-five pupils. Not one of them is incapable of learning, with regular lessons and proper practice. Several other teachers have classes of more or less size.

Under such conditions, if teachers will organize, they can regulate many usual troubles.

They can almost banish missed lessons by uniting in requiring pay for lessons missed without previous notice.

They can require that missed lessons be made up within the term or be paid for.

They can regulate many local conditions which often hinder the success of their work.

Try it!

MARY E. HASS (Kansas).

Dressing the Part

By Katherine Joy Postle

HAVE you never gotten sick of the sight of some one who seemed to have but one dress, one necktie, or one hat? Can you remember how, in your school days, you were so glad when your teacher at last got a new dress, or a new waist or a new tie—or something? Is there not more, psychologically, to this clothes problem than is ordinarily supposed? Do our music students ever become tired of looking at us, and do their lessons become one drab hour after another because we ourselves are drab and monotonous?

Not the least of the benefits of wearing attractive clothes are the self-confidence, the poise and the optimism they impart to the wearer. They lend a sort of zest to everything one does and render one at least partially immune to petty annoyances. When thus attired, children greet one with a light in their eyes that is truly heart-warming; and their shy or enthusiastic compliments establish a bond that makes it easier to understand each other.

The music teacher represents one of the most beautiful things in life. Is it not part of her (or his) mission to dress the part—not showily nor expensively, but with taste, variety, and distinction? On the material, bread and butter, side of the question, is it not possible that you may draw to us more pupils by an attractive personal appearance?

KIMBALL

"The Instrument of Yesterday, Today and Tomorrow"

KIMBALL Pianos throughout the years have maintained a standard of excellence that has won unqualified endorsement from artists preeminent in the musical world.

JOSEPH SCHWARZ, "a glory to the lyric stage," will use the Kimball throughout his tours for 1924-25, and says "The Kimball entirely meets my requirements."

CHARLES MARSHALL, proclaimed the most heroic figure among dramatic tenors, finds the Kimball "beautiful, and the tone full and very resonant."

The DE RESZKES, who are among the never to be forgotten voices of the world, both enthusiastically praised the Kimball.

The Violinist's Etude

Edited by ROBERT BRAINE

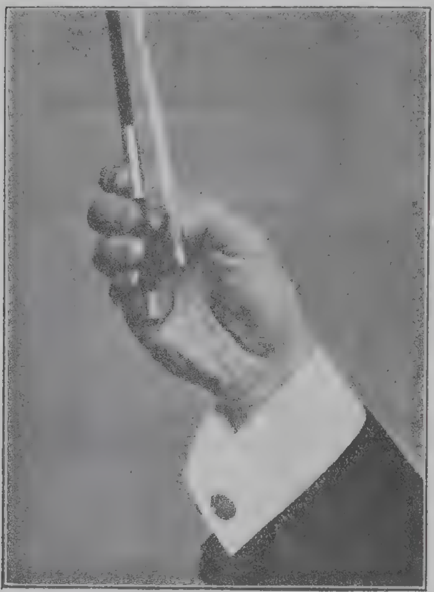
It is the Ambition of THE ETUDE to make this Department "A Violinist's Magazine Complete in Itself"

The Technic of the Bow

By Frank Thistleton

(The following extract is made from Mr. Thistleton's excellent work upon *Modern Violin Technic,* published by Longmans, Green & Co.)

AFTER the pupil has become acquainted with the correct method of supporting the violin, the teacher should proceed to explain in what manner the bow is held. A beginner usually finds considerable difficulty in accomplishing this satisfactorily. The fact is that a firm hold of the stick, without consequent stiffening of the arm and wrist muscles, can only be acquired after careful practice. In addition, the holding of the bow is a much more subtle thing than the mere supporting of the violin. The technique of the right hand is undoubtedly more difficult, both to learn and teach, than that of the left. There are numberless details, each one of which helps to make or mar the success of the whole.



EXAMPLE I

Begin by turning the first joint of the thumb outwards (Ex. I.), and keeping this position, insert the tip in the base of the nut, the thumb-joint being inclined slightly towards the point of the bow. In this way a direct downward grip on the stick will be obtained. It is absolutely essential to the proper control of the bow that the first joint of the thumb should be turned outwards, and that it is always in a tensely flexible condition. The fingers should then be placed on the stick in the following manner. The first lies along the stick just beyond the first joint, and on no account beyond the second, which would destroy its flexibility. In this position the bow will lie between the first and second finger-joints. The second and third fingers should fall just *over* the stick to about their first joints which must be slightly bent outwards. The fingers must not be perched on the top of the bow, with the exception of the fourth, the tip of which actually rests on this part of the stick (Ex. I). Do not cramp the fingers too much together, but try to hold the bow naturally, and without unnecessary effort. The second finger should be opposite to the tip of the thumb, and all the finger-joints bent outwards; while the fingers themselves should be inclined towards the stick, the first pressing decidedly against it. In this position the bow must be held firmly but without stiffness.

The Stroke

The next step is the passing of the bow across the strings, which is undoubtedly the most important point in the whole of violin-playing. *Everything* depends on the manner in which this is accomplished. The technic of the bow is far more necessary than left-hand technic. If a man's voice be poor, his singing cannot be quite satisfactory. In violin-playing the bow is part of the voice: therefore, the most vital point in violin technic is good bowing; without this the left hand is useless, as the bow only spoils what the fingers achieve. Good bowing, on the other hand, will actually facilitate the passage of the fingers. Physically, the bow is the productive agent but mentally it should be something more. This mental difference I consider very important, as, if the violin is considered as being the entire voice, there is a mental and unconscious transference of the control and everything connected with the voice to the left hand—which has practically nothing to do with the voice or its control, beyond the mere stopping of the notes—and the bow is only too often left to take care of itself. This is especially the case with beginners. Therefore, I look upon the individual as being the productive agent, and the violin and bow together as the voice.

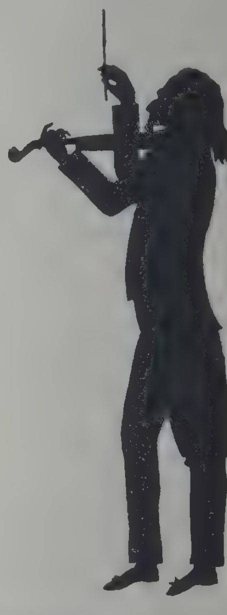
In the first place it is essential that the player should understand which part of the arm or wrist moves for each division of the bow. For instance, very minute strokes only require a delicate movement of the fingers and the wrist, and this is gradually amplified according to the length of the stroke until the whole of the arm from the shoulder is brought into play.

The Upper Half of the Bow

To begin with, hold the bow in the position previously described, with the point resting on the strings (Ex. II). The elbow should then be turned slightly upwards, which will incline the fingers towards the bow and insure the first finger pressing firmly against it. The arm should rest no weight on the stick, but must be supported direct from the shoulder. The bow should not be allowed to rest on the strings with its own weight, as when it does, the stick is out of control. Pressure has to be applied at the point and taken off at the nut to produce an even tone, as the weight of the bow is different in various parts of the stick. Thus, while the tone may be found to be quite satisfactory when the bow is properly balanced on the strings at the middle, it will be found that there is not sufficient weight at the point and too much at the nut to produce an even quality of tone.

Now gradually move the bow from the point towards the middle. To do this it is necessary to move only the wrist and forearm; the upper arm therefore remains quite stationary (Ex. III-IV). As the forearm moves upwards, the wrist gradually rises with it until, when the middle is reached, the wrist and forearm are level; everything from the knuckle-bones to the elbow forming a straight line, which should be exactly parallel to the strings of the violin (Ex. III). During the whole of the stroke, the wrist and fingers retain the same position with regard to the stick: their hold is never altered throughout the entire stroke (Ex. II-III).

It is a good plan always to stop on reaching the middle of the bow, so as to execute only half the stroke at one time. The pause gives time to see if the position of the arm and wrist is correct, and incidentally to concentrate the mind on the movements about to be attempted. Also by pausing in this way the pupil can realize precisely where one movement of the arm ends and another begins. The bow, which should be inclined slightly towards the finger-board, remains at all times parallel to the bridge.

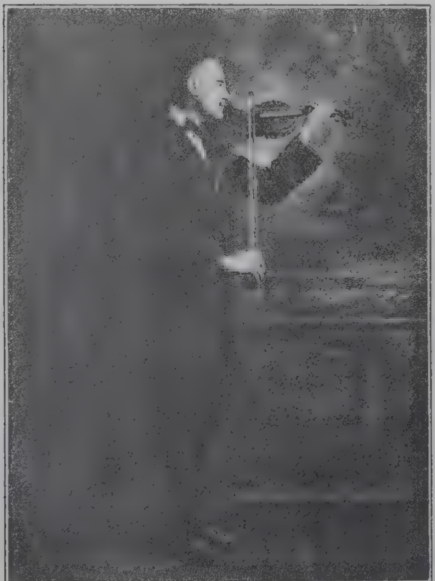


A CONTEMPORARY SILHOUETTE OF PAGANINI

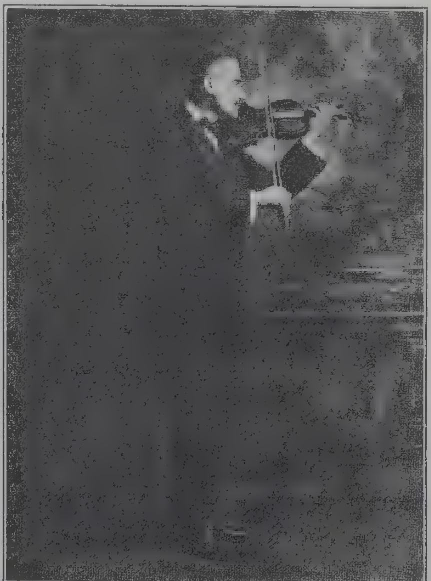
It is well to continue practicing the movement of the bow from the point to the middle and back again to the point; always observing that only the wrist and forearm should move, and that when the middle of the bow is reached, they should form one straight line, which is parallel to the finger-board. Thus, when the middle of the bow is on the strings we have almost a parallelogram, which is completed by the bow being parallel to the upper arm (Ex. III).

The Lower Half of the Bow

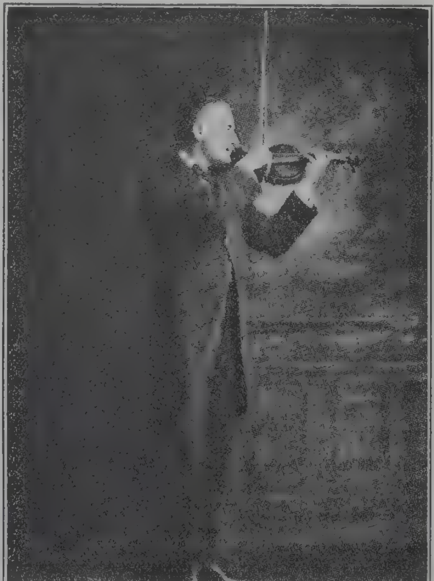
For the half of the bow from the middle to the nut, the whole arm from the shoulder is brought into use. The wrist and forearm continue the upward movement, while the upper arm moves *forward,* the elbow actually moving across the chest (Ex. V.) and neither upwards nor downwards, but remaining throughout in the same plane. This is the secret of making the movement successfully—viz. that it is executed in *one plane*. The whole then becomes one movement continued to its com-



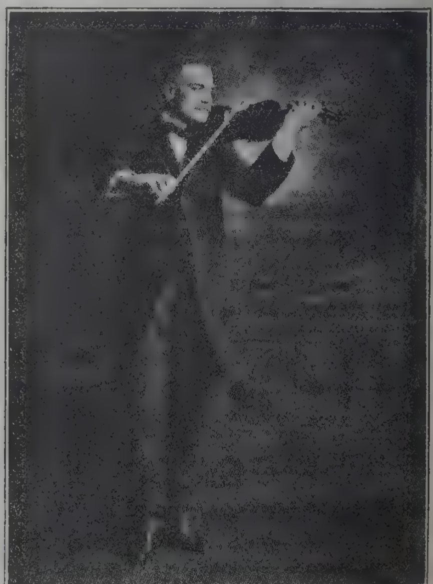
EXAMPLE II



EXAMPLE III



EXAMPLE IV



EXAMPLE V

pletion, the wrist gradually rising throughout just sufficiently to allow the forearm and upper arm to move freely without altering the angle of the bow towards the strings or the position of the fingers on the stick.

This movement takes place on each string in a different plane, so that on the G string the arm is raised well away from the body, the whole movement taking place as described in a plane almost parallel to the floor (Ex. V). The elbow remains high throughout, and must not be dropped on any account until the player changes to a higher string, when the whole arm *from the shoulder* makes a downward movement *en bloc*, without altering the position of any portion of the arm or wrist separately, until the bow rests naturally on the next string.

When playing on the E string, therefore, the whole arm falls to the side of the body (Ex. II); on the A string it is slightly higher (Ex. IV), and on the D string higher still, until, as I have just stated, the arm is almost parallel to the floor when the G string is reached (Ex. V).

So long as the bow remains on one string so long the arm remains in one plane, and no movement of any part of the arm or wrist takes place outside that plane. There will then be four separate planes for single and three for double notes, so that we have a possible seven planes for the bow to work in. Chords, as I shall explain later are a combination of two planes.

Now, from what I have stated, it will be apparent that the old idea—viz. that one should play with a book held under the bow-arm so as to keep it fixed to the side of the body—will not bear the light of serious reasoning. No violinist ever played satisfactorily in this way, or ever will. How the idea first arose it is difficult to understand. Probably a well-known representation of Paganini playing the violin (Ex. VI)—a grotesque statue in which the virtuoso seems to have his arms glued to his body—has been taken seriously; but the work can only be regarded in the light of a caricature. A copy of a silhouette by Edouart was regarded by Paganini himself as being the only drawing which bore a true resemblance to him. I should like to draw the reader's attention to the whole attitude.

The Story of the Famous Bach "Air on the G String"

Many violinists are unaware that the name, "Air on the G String" probably never entered Bach's head. The famous composition, which is played by violinists everywhere, is the second movement from Bach's third *Suite in D*. It was not until 1871 that the famous German violinist, August Wilhelmj (who toured America with Rubinstein), took it upon himself to transpose this movement to the key of C, and direct that it be played entirely upon the G string. Since then its original form is forgotten by many.

"Tone" vs. "Durability"

It is unfortunate that the best sounding violin strings are the least durable. In recent years the problem how to obtain even fairly good strings has become more and more difficult. This is especially the case in regard to the delicate "E," which only in its highest perfection (quality of material, tensile strength, and absolutely even thickness) fulfills the requirements of tonal beauty, clearness and carrying power and does not fall short in one most essential respect, namely, to form pure fifths with the adjoining tones on the "A" string.

The Misunderstood Viola

By Alfred Sprissler

The human tendency toward superstition seems to have settled peculiar notions in some minds as to the qualities of certain musical instruments. The oboe and the bassoon have enjoyed a singularly unsavory reputation. The flute has had its day of contumely and sneers. Every cheap humorist has gained smiles or coins by a low references to a bass viol. Every self-styled musical critic has perpetrated the time worn jape about the English horn, that it is neither English nor is it a horn.

The musician, knowing that all music and the practice thereof is difficult, and that every instrument has its inherent peculiarities, is above these narrow conceptions. Because of this, the viola, for long the refuge of the worn-out violinist, has come to its dominion and is receiving its mede of appreciation. The later orchestral composers have appreciated the viola's intrinsic worth and have given it things to do which require a musician of real worth. The long ignored and almost forgotten string quartet has enjoyed a renaissance during the last decade and has caused the demand for good viola players to far exceed the supply.

The viola, as played by several artists who are devoting their time to it as a solo instrument, shows itself to be one of the finest and most sympathetic of all instruments. A little higher in pitch than the 'cello and a little lower than the violin, its tones have that delicious languor and perhaps downright sensuousness, which appeal. All this, coupled with its sweet and melancholy timbre, make it the ideal means of interpreting some of Schumann's best work, his *Machrchenbilder*. These fairy pieces are not sufficiently well known, having been originally composed for the viola and, so far as known, never having been transcribed.

Better known, perhaps, is the work of Kalliwoda in his six noctunes. These bring out that distinctive viola tone which, to quote one musician, is like an apricot, "sweet and dry." In addition, Joachim's "Hebrew Melodies," inspired by Lord Byron's poems under the same name, have been well calculated to fit the compass of the instrument and show its best qualities. Georg Goltermann, who turned out music for violoncello by the bale, composed two *Grandes Duos* which are ably transcribed for the viola.

However, although the instrument is, as has been shown, a solo medium, and is quite capable of becoming the vehicle for the presentation of many artists, its *forte* lies elsewhere. Doubtless, ever since the inception of that which we now know as the string quartet, the viola has been on a par with the other instruments in that particular combination. This is contrary to the common orchestral usage in which the viola, while not particularly noticeable when it is playing, is conspicuously absent when it is mute.

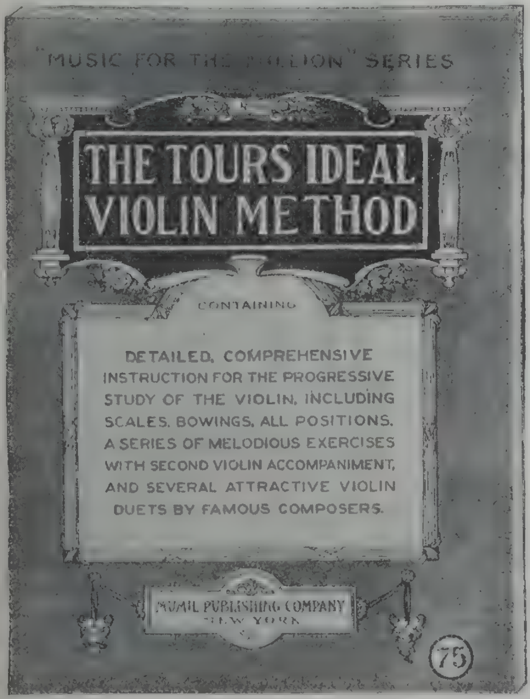
In the quartet, and the string trio, it is a salient instrument. Much beautiful work, not only contrapuntal development and harmony but actual melody is given to it, as in the popular Smetana quartet. The fast movement, alla polacca, is composed of passages which tax the best of players. Dvorak made use of it, and Beethoven especially in his C minor Quartet, Opus 59, No. 3, when the fugue which is the final movement the viola has fully as much difficulty to meet as the first violin.

"Sincerity and personality as well as disinterestedness, an expression of himself in his art that is absolutely honest, these, I believe, are ideals which every artist should cherish and try to realize."

—Kreisler.

The Most Complete Violin Instructor Published

Every violin teacher or student who examines this violin method cannot fail to be impressed by the thorough, logical and practical manner in which the problems of violin study are elucidated. Some idea of the completeness of the work may be gathered by reading the following resumé of its complete contents:



"MUSIC FOR THE MILLION" SERIES

THE TOURS IDEAL VIOLIN METHOD

CONTAINING

DETAILED, COMPREHENSIVE INSTRUCTION FOR THE PROGRESSIVE STUDY OF THE VIOLIN, INCLUDING SCALES, BOWINGS, ALL POSITIONS, A SERIES OF MELODIOUS EXERCISES WITH SECOND VIOLIN ACCOMPANIMENT, AND SEVERAL ATTRACTIVE VIOLIN DUETS BY FAMOUS COMPOSERS.

MUMIL PUBLISHING COMPANY NEW YORK

mention THE ETUDE when addressing our advertisers.

String trios have generally been overlooked in favor of the quartet. Why this is so, no one seems to know, nor do they care particularly. True, the literature is not voluminous, but what there is of it is worthy of profound study.

In a string trio one part is missing. Therefore, this part must necessarily be taken by one of the other instruments, in addition to the work that instrument would have had, had the trio been composed as a quartet instead of a trio. This phase of the trio frequently sends the 'cellist into the mazes of the treble clef, in which the thumb positions are brought into constant and awkward play.

Frequently, however, that work is taken from the 'cello in order to allow the wielder of that instrument to regain his breath and is given to the viola. The Beethoven string trios are examples of this and the viola parts of those works, coupled with that of the Mozart *Divertimento*, form a complete school for the viola. In them everything will be met, and every possible situation on the instrument encountered.

No article concerning the viola is complete without some mention of Mozart's *Clarinet Trio*, a work scored for clarinet, viola and pianoforte. This is in all probability one of the most melodious of Mozart's compositions, which is a rather large statement, considering Mozart's gift for melody.

A playing knowledge of the viola is invaluable to the advanced pianist, allowing him an insight into that part of music too often omitted entirely by pianists, that is, chamber music. And it would permit him to participate in the modern orchestra without detriment to his piano technique.

A celebrated teacher of the violin is recalled who had a student, willing enough, but apparently, practice as he would, unable to acquire much speed, nor could he master the higher positions. His teacher at length told him the truth and recommended that he try the viola, continuing under his master's instructions. He did, and it "took." And strange to say, he is now a professional, playing in a nationally known symphonic orchestra.

Similar is the case of the person whose fingers seemed to be too large to allow the making of perfect semitones on the violin. In other words, to quote Joseph Cawthorn, "he hat doo many gnuckles in his hant." He, too, changed to the viola, and in a short time became a very creditable performer on that instrument.

So then, with the viola, it is as the Dutch say: "Onbekend onbemind (Unknown, unloved.)" Time will come when the viola will take its place. But until then its charms and ability are known only to a select circle.

Violin Questions Answered

By MR. BRAINE

Violin Practice

J. H.—Authorities differ in regard to the amount of practice which should be done daily by violin pupils. In the case of pupils devoting all their time to the study of music, some teachers advise four hours violin practice, others as high as six or seven or even eight, if the pupil is robust and has very strong vitality. My own opinion is that four hours is plenty, taken in shifts of half hours. with fifteen minutes rest between, two hours being done in the morning and two in the afternoon or evening. Pupils going to the public schools can, of course, do only an hour or two. (2) I cannot advise you as to whether you or your friend have made the greater progress without hearing you play. The names of the compositions you play mean nothing. It is how well you play them.

Annoying Neighbors

F. R. L.—As the violin practice annoys the people where you board, possibly you could arrange to practice in the evenings in the office where you work. If not, you might be able to get practice time in some conservatory or school of music, or in some private house where they take roomers. It will not injure your progress to do part of your practicing with the mute, or on a "practice" or "mute" violin; but you had better not do all your practicing in this manner, as it interferes with the development of a full, free, sonorous and brilliant tone.

Rosins

E. B.—Any of the good prepared rosins on the market should give good results. The trouble with your tone probably comes from some other cause, although I cannot tell what it is without hearing you play. (2) The sound-post should be set a quarter of an inch or so back of the right foot of the bridge. The exact point for best results can be learned only by experiment. (3) String makers often oil gut strings before they send them out, the object being to prevent the strings from drying out. You could oil your strings with oil of sweet almonds, being careful not to oil the part of the strings which is touched by the hair of the bow in playing. (4) I would advise you to use only a steel E. There is practically no danger that the string will strike your eye if it breaks. In fact gut strings are much more dangerous in this respect than steel.

Teaching Qualifications

R. M. P.—If you have studied the works you name carefully, with a really good teacher, you would be theoretically competent to teach pupils in the earlier grades. However, teaching is a special gift, and requires much experience, so it would be doubtful if you could hope to turn out good pupils in less than several years of actual teaching experience. (2) You could no doubt play some of the easier compositions of Sarasate, say the *Playera, Danse Espagnole, Op. 23, No. 5.* (3) If you can play *Obertasse* well, as you say, I do not see why you cannot play Kreisler's *Liebesfreud.* I cannot guess at your difficulty without a personal hearing. (4) If you have not already studied them, I should think Mazas "Brilliant Studies, Op. 36, Book II," would interest you. These are used by good teachers everywhere.

Violinists' Nationality

J. I. B.—Richard Drigo, Russian; Boccherini, Italian; Labitzky, of Polish descent, but born in Schoenfeld, Germany; Henri Ernst, Moravian. I can find no details of the life of Accolay in the biographical dictionaries. The only piece of note he wrote was the Concerto in A Minor you mention, which, as you say, is an excellent work. It is in universal use for students.

Viola Size

H. J. C.—The dimensions of the viola are about one-seventh larger than those of the violin, although there is a great deal of latitude in the size of the violas, some being larger and some smaller. The player with a long arm and long fingers can handle the larger sizes with ease; while the player with short arm and fingers must use an instrument which he can reach. In buying a viola it is best for the player to try several of different sizes until he finds one which is adapted to his arm and fingers.

Beginning Studies

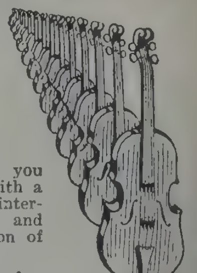
A. L. W.—For the start the "Easier Elementary Method for Beginners, Op. 38," by Wohlfahrt, published by the Theo. Presser Co., Philadelphia, Pa., will do as well as anything. (2) Some teachers use a graded course by one composer in teaching, while others use works by various authors, as the pupil seems to require them. I consider the last plan the best. (3) As the first and third positions are used more than others in violin playing, it is best to learn these positions thoroughly first. After those the second and the others can be taken up. (4) For easy violin and piano work in the first position, you can use the *Garland of Flowers*, by Weiss. These come in twelve books of progressive difficulty.

Amyl Nitrate

W. H. M.—The chemical you inquire about, the vapor of which has a strong stimulating effect on the heart, and which is used by some people for overcoming stage fright when playing in public, is amyl nitrate. When used, the chemical is enclosed in capsule form, in a delicate glass shell which, when crushed, gives out the stimulating vapor, which acts as a stimulant on the heart. It is used for *angina pectoris* and other forms of heart disease. No one should use this drug for any purpose whatever except on the advice of a competent physician.

Bow-Makers

M. R.—The following is a list of good bow makers: Tourte, La Fleur, Voirin, Sartory, Nurnberger, Hammig, Vuillaume, Hill, Pageot, Dodd, Peccatte, Bausch, Tubbs, Bernardel, Gand, Lamy, and many others. For prices you had better write to some of the firms who deal in old violins, who advertise in THE ETUDE. The prices vary greatly according to the maker, the quality, and the mounting. (2) A new bow is as good as an old one, if it is well made. The two bows you mention, Nurnberger and Sartory, are very good, if you get good specimens of these makes.



VIOLINS
Examine our collection

We have all kinds of violins for all kinds of players, "ready for the bow." You can have one or more for ten days' trial; also outfits. Let us demonstrate to you that we can "fit you" with a violin that will give your interpretations added charm and elevate you in the opinion of your friends as a player.

Question and Answer Department

Conducted by ARTHUR DE GUICHARD

Always send your full name and address. No questions will be answered when this has been neglected.

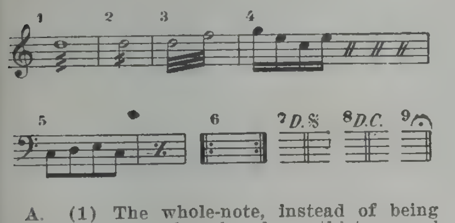
Only your initials or a chosen nom de plume will be printed.

Make your questions short and to the point.

Questions regarding particular pieces, metronomic markings, etc., not likely to be of interest to the greater number of ETUDE readers will not be considered.

Signs of Abbreviations

Q. Will you kindly explain to me the meanings of the following marks or signs, which I have found in my piano music?—Subscriber, London, Ky.



A. (1) The whole-note, instead of being sustained, is to be played as thirty-second notes for the duration of a whole-note; (2) The half-note is to be played as sixteen sixteenth notes; (3) The tremolo of a third, *e.g.*, is to be played at the rate of thirty-second notes for the duration of a half-note; (4) The group of four sixteenth-notes is to be repeated three times; (5) The bass-notes of the first measure are to be repeated for the second measure; (6) The notes between the dots are all to be repeated in like order; (7) D. S., short for Dal Segno (from the sign), signifies that everything is to be repeated from the S sign; (8) D. C., short for Da Capo (from the beginning), signifies that the movement is to be repeated from the beginning; (9) This sign placed over a double-bar denotes the end of a movement or piece.

An Old French Dance.

Q. What was the Galliard? Was it not some kind of dance? If so, is it ever danced now?—Olive B., Detroit, Mich.

A. The Galliard was a very popular dance in the sixteenth century. It lost its vogue some time in the following century, and has not appeared since. Originally a French dance of a very gay and jolly character, it took its name from the French *gaillard*, meaning a gay fellow, full of life—the opposite sex was termed *gaillarde*. The words are in use today applied to persons only.

Frequency of Lessons

Q. I am fifteen and in what my teacher calls the third grade of piano study. I take one lesson a week, but find my progress very slow. Should I take more than one lesson a week?—Hilda B., Detroit, Mich.

A. When you are more advanced one lesson per week may suffice; but in your present stage you require at least two or three lessons weekly. In addition to which, you should study Solfeggio, Theory, and read some of the best works on Musical History and the biographies of the chief musicians (composers, players and singers).

Dominant, Sub-dominant, Mediant, Sub-mediant

Q. What is the dominant so-called? Is the sub-dominant the note below the dominant? If so, how comes it that the sub-mediant is not the note below the mediant? All this seems very foggy to me; will you kindly give some light on the subject?—A. C. D., Providence, R. I.

A. The name "dominant" is given to the perfect fifth above the tonic, or key-note, whether it be major or minor, because its harmonies dominate the key—of course, next after the tonic harmonies. The "sub-dominant" is the perfect fifth *below the tonic*. Its harmonies are next in importance to those of the dominant. The "mediant" is the middle note between the tonic and dominant; the "sub-mediant" is the middle note between the tonic and (descending) sub-dominant. Very easy, is it not? Tonic, *do*; go up a 5th, dominant, *sol*; go down a 3rd, mediant, *mi*. Tonic, *do*; go down a 5th, sub-dominant, *fa*; or, from the tonic *do* go down a 3rd to sub-mediant, *la*.

Technic, Style, Interpretation

Q. I am twenty-two and have had piano lessons for two years, practicing faithfully. Thinking I had reached a point when I might take more advanced lessons, in order to study the art of interpretation and acquire more style, I applied to a well-known teacher whose specialty lies in advanced work. I underwent a careful examination, during which I played certain scales and arpeggios, Chopin's Military Polonaise (in A), tried to read a piece in four flats, and very lamely answered some elementary questions in theory. To my great chagrin the teacher told me that I had positively no technical facility, no theoretical knowledge, and that the Czerny's exercises, which I had struggled through, and the Polonaise were far beyond me. He added that my one redeeming point—a most important one he said—was a really good touch, combined with correct position of hands, arms and body. He advised me to study with his assistant for six months, then to apply again. But I think I could do so much better with him, himself. What do you advise me to do? I could practice as much as desired daily, as I have no occupation.—Study, St. Louis, Mo.

A. Your dilemma is a very ordinary one, occurring daily; want of elementary technic, joined to a desire to play difficult music. The teacher you mention appears both reliable and frank. Since you feel so strongly about it, the best thing for you to do is to speak quite plainly to him and give him a specific promise to practice faithfully as he may direct; it is just possible that he may take you. If so, live up to your promise.

(This Q. and A. is quite out of the usual matter for treatment by THE ETUDE—it is answered in the hope that a sincere music-seeker may not be discouraged but may become a musical success.—Ed.)

The Practice of Technic

Q. Is it desirable for me to practice all the major and minor scales every day?—Theresa, Milton, Mass.

A. It is not only desirable; it is absolutely necessary to have them literally at your fingers' ends, not alone in octaves, but in tenths, sixths and thirds. Remember that all your success as a pianist depends upon your technic, chiefly—and chiefest, on scales, arpeggios and touch.

Harmony and Counterpoint—not forgetting Fugue

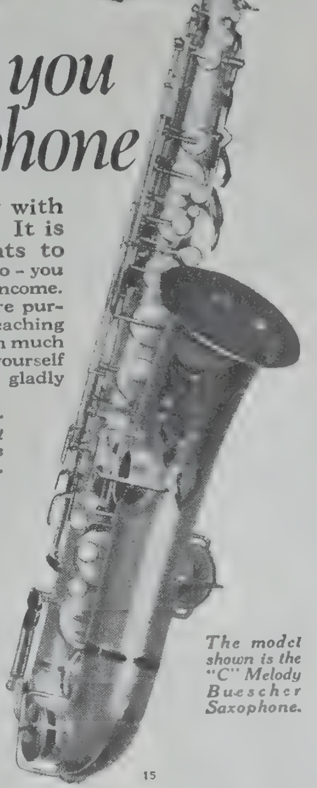
Q. My teacher tells me that I must study Harmony and Counterpoint; that is, if I really wish to become a good player. As my technic is said to be very good, would I not be wasting valuable time by studying theory, especially as I shall never become a composer?—Irma S., Cincinnati, O.

A. Your teacher's advice is admirable and necessary. You will never be a good player until you are fully equipped with an intimate knowledge of Harmony and Counterpoint, plus some Fugue. Of course, your technic is essential, just as a knowledge of orthography and grammar are needed for the understanding of a book of any kind. You have something to do other than the firework display of a mere virtuoso—you *have to interpret*. How can you do that intelligibly if you do not know the composer's meaning? You have to know his language and be able to speak it, in order to convey his message, unaltered, to the audience.

Orchestral Instruments

Q. What are the chief instruments employed in a symphony orchestra? What is a transposing instrument? Which are the chief ones?—Cornet, Los Angeles, Cal.

A. The orchestral instruments are divided into four groups, or families: the Strings, Wood-wind, Brass-wind, Percussion. To the *Strings* belong the violins (first and second), viola (also called alto because its music is written in the alto, or C, clef on the third line—it usually plays the tenor part), violoncello, contra-bass. The harp is a stringed instrument, but it stands apart and finds its place only in the modern orchestra. The *Wood-wind* consists of the piccolo, flute, oboe, clarinet (in C, B flat, A, E flat, A and the bass-clarinet), bassoon and contra-bassoon, basset horn and the English horn. The *Brass-wind:* The horn (natural and keyed) or French horn, trumpet (natural and keyed), trombone (valve and slide), bass-tuba and the ophicleide. *Percussion instruments:* kettle-drums (also termed tympani), military drum (also termed side and snare-drum) and the long or bass-drum; glockenspiel, bells, gong (or tam-tam), cymbals and triangle. A *transposing instrument* is one which sounds higher or lower than the key of the music which it is playing, thus: the C clarinet, oboe, flute, bassoon, C-alto horn, C-trumpet, the natural trombone, bass-tuba and ophicleide are *non*-transposing and sound the notes as written. On the other hand, transposing instruments read in one key and, according to their pitch, play in another, thus: the B flat clarinet while reading a piece in the key of C, transposes it a whole tone lower into the key of B flat. The chief transposing instruments are: piccolo (an octave higher), contra-bass (an octave lower), English horn, basset-horn, contra-bassoon (an octave lower), the clarinets in B flat, A, A flat, E flat, and the bass-clarinets in C (an octave lower) and in B flat (a ninth lower), all the French horns (commonly termed "horns") except the one in C-alto (note that the C-horn transposes an octave lower), all the trumpets except the one in C, all the trombones except the slide-trombone when used without the slide. The trombones are usually treated as non-transposing.



In only a few weeks you can TEACH *the saxophone*

You will be astonished at the ease and rapidity with which you master this remarkable instrument. It is by long odds the easiest of all wind instruments to learn to play. In a few weeks - or, at most, a month or two - you will be able to teach others and add considerably to your income. It is really your opportunity. Thousands of young people are purchasing this most popular instrument. Many of them are teaching themselves because there are few teachers, but they would learn much more rapidly with intelligent supervision. Why not equip yourself at once to satisfy this need and profit by it? We shall gladly refer students to you.

The Most Popular of All Modern Instruction Works for the Piano

"Beginner's Book" is a veritable "first reader" for the piano. Thousands of teachers enthusiastically state that it is the best of elementary instruction books for young students. "Student's Book" and "Player's Book" are also very popular because of their value as educational works covering the stages following the "Beginner's Book." Throughout this school the material is attractive and pleasing and the teacher is enabled to achieye speedy results in a thorough manner.

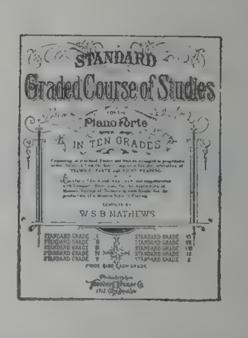
STANDARD GRADED COURSE *of* STUDIES

FOR THE PIANOFORTE
In Ten Grades—Ten Volumes

By W. S. B. Mathews Price, $1.00

An Unequaled Educational Work for Piano

This is a complete, progressive series of the indispensable studies for the piano from the very beginning to the highest grade. It is a convenience to teachers and a great advantage to pupils. Except for young pupils, study can be started with the first book. Where the pupil is young, however, it is well to lead up to this course with the "Beginner's Book."



SUCCESSFUL TEACHING WORKS FOR VARIOUS GRADES of INSTRUCTION

TOUCH AND TECHNIC—By Dr. Wm. Mason—In Four Parts - $1.00 ea.

One of the most remarkable works in the entire range of piano pedagogy. A school for artistic piano playing highly endorsed by Paderewski, Joseffy, Grabrillowitsch, Liszt and others.

MASTERING THE SCALES AND ARPEGGIOS—By J. F. Cooke - Pr., $1.00

Scale study from the beginning to the highest degree of proficiency.

SELECTED CZERNY STUDIES—By Emil Liebling—In Three Volumes - $1.00 ea.

Extensively used because these volumes give the best of Czerny's wonderfully helpful studies arranged in progressive order. The editing, fingering and annotating are masterly.

COMPLETE SCHOOL OF TECHNIC—By I. Philipp - - Pr., $2.00

A compendium of modern technic. Excellent daily practice material.

NOTE SPELLING BOOK—By Adele Sutor - - - Pr., 50c

An unusually successful work. The young student is instructed in notation in an entertaining manner.

FIRST GRADE STUDIES—By L. A. Bugbee - - - Pr., $1.00

Exceptionally attractive material for use after the first few rudimentary lessons.

ADULT BEGINNER'S BOOK—By C. I. Norcross - - Pr., $1.75

These are "suggestive studies for music lovers." An excellent manual for the intellectually matured piano student.

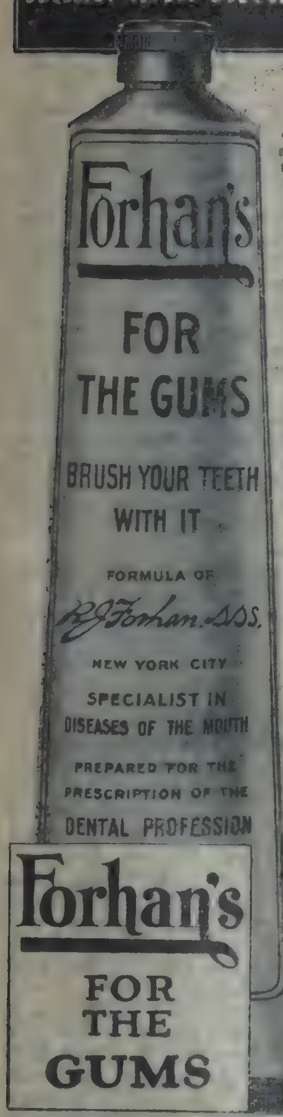
A signal of trouble—tender and bleeding gums



Forhan's
FOR THE GUMS
BRUSH YOUR TEETH WITH IT
FORMULA OF
R.J.Forhan, D.D.S.
NEW YORK CITY
SPECIALIST IN DISEASES OF THE MOUTH
PREPARED FOR THE PRESCRIPTION OF THE DENTAL PROFESSION
Forhan's
FOR THE GUMS

AS the soil nourishes the tree-roots the gums nourish the teeth. And as the tree decays if you bare the tree-roots, so do the teeth decay if the gums shrink down from the tooth-base.

This condition is common. It is known as Pyorrhea. *Four out of five* people who are over forty suffer from it. Ordinary tooth-pastes will not prevent it.

Forhan's Preparation *does* prevent it if used in time and used consistently. So Forhan's protects the tooth at the tooth-base which is unprotected by enamel.

On top of this Forhan's preserves gums in their pink normal vital condition. Use it daily and their firmed tissue-structure will vigorously support the teeth. They will not loosen. Neither will the mouth prematurely flatten through receding gums. Further, your gums will neither tender nor bleed.

Gums and teeth alike will be sounder, and your teeth will be scientifically polished, too.

If gum-shrinkage has already set in, start using Forhan's and consult a dentist immediately for special treatment.

In 35c and 60c tubes at all druggists in the United States.

Learning to Play Softly

By Harold Mynning

MANY piano students seem to strive day by day in every way to play louder and louder. Alas, it is quite easy to play loud. But very few amateurs can play the soft notes correctly. It requires much greater skill to play softly than loud.

For example, play this chord, D, F-sharp, A and D, loudly. No doubt every note will ring out sonorous and true. Now play this same chord very softly. Probably one note of the chord will not be heard at all, while some of the other notes will be louder than others. In other words, the chord will not sound clear and even as it did when you played it louder. Why is this? Simply that it takes much more control to play very softly than it does to play loud. True, some poor pianists never play anything but soft; but it is a weak, flabby softness, not the controlled pianissimo that denotes strength.

But as control is the key of the situation, it is of course the thing the pupil should above all strive for. This is simply intelligently building up one's technic. And, it might be added, it is not half so important how you hold your hand as how you use your ears. Let the ear be your infallible guide. If you strive earnestly to play soft notes artistically and listen intently you will learn how to play them. And this brings us to the importance of playing soft as a means of training the ear. When we played constantly "forte" the acute sense of hearing is more or less dulled.

I would not leave the impression that it is not important to play loud at times; but, after all, this is something that can be learned without much trouble.

Helps for the Growth of the Rural Teacher

By W. L. Clark

1. TAKE a good musical magazine. None needs its helpfulness more than the rural teacher.

2. Study some musical history. This gives a good background for work.

3. Stress accuracy in your teaching. Some pupil may yet attain to great heights in the musical world.

4. Set aside practice periods for yourself, to be devoted to the best music. Every teacher needs definite practice, even though pupils are not advanced and teaching materials are simple.

5. Go to a city occasionally to attend a concert. It will keep you alert to the greatness of the musical profession.

6. Have a musical library of your own, to which you add some good books relating to music every year.

7. If practicable, organize an orchestra in the community where you teach. Practice in orchestra work aids your pupils in obtaining correct time and interpretation, and increases the interest of others in your work.

8. Keep a good musical dictionary at hand. It will assist you in getting acquainted with unusual musical terms.

9. Organize a musical club of all your pupils. Have them to meet once or twice a month to render a musical program. This will accustom them to playing in the presence of others.

10. Keep a definite plan of the work you believe each of your pupils can accomplish in a definite length of time.

The prime factors in a successful singer are natural gift of voice, intelligence, interpretative power, personality and perseverence.

Piano Facts

BACH was one of the first to advocate playing the keyboard with the fingers curved. Prior to his time most of the keyboard instruments were played with straight fingers.

The first real clavier sonatas were those of Kuknau, published in 1695.

Mozart's advice upon the chief essentials of good technic are, "Above all things a player should possess a quiet, steady hand, the natural lightness, smoothness and gliding rapidity of which is so developed that the passages flow like *oil*."

John Field's greatest claim for immortality does not consist so much in the fact that he is said to have created the *Nocturne*, but rather that he was the first to break away from the conventionalized form of compositions such as *Sonatas* and *Rondos*.

Bridging the Treble and the Bass Clefs

By Mrs. N. D. Wells

PUPILS must have a support for any given form of instruction upon any basic principle. So many are puzzled and left hanging up in midair concerning many points regarding the different clefs, for instance.

We teach them that the C which is nearest the middle of the keyboard divides the right hand or Treble part from the left hand or Bass. Things move smoothly along until the pupil is first confronted with the ledger lines piecing on the Treble staff at the bottom and the Bass staff at the top.

This writing is not concerned with ledger lines either above the Treble or below the Bass; for usually these do not puzzle pupils to any extent. It is in the middle of the keyboard where the young student or even the adult beginner is most benuddled in trying to understand how the upper staff can suffer a tunnel made by the Bass staff, or how—which seems even more difficult of comprehension, that the Bass staff can be imposed upon by having a basement dug out for support of the Treble staff.

An *imaginary* stairway, leading up above the Bass staff, and another stair leading down below the Treble staff have helped me in giving the pupil definite ideas of how "these things can be;" or, in other words, what to some minds seems impossible is, by the above method, made quite clear.

Weber's Little Joke

IN a certain city in Germany once the officials conceived the brilliant idea of honoring the town watchmen with a great feast. He wanted this to be an important occasion and decided to have a Roast Ox. To add to the ceremony he engaged a local singing society to take part. Not satisfied with this he composed the words for the chorus which he wanted sung, which ran:

"When everything is safe and sound,
And all the watchmen are around [illegible]
Then eat we Oxen."

Weber, then a youth, saw the humor of setting such a ludicrous text and made the most of it. When it came to the end of the "cantata," he wrote a chorus to which the sole words were "We Oxen," repeated over and over again.

TEN MOTHER GOOSE NURSERY RHYMES

TAKES OFF 41 LBS. In Exactly 7 Weeks!

The lady in the picture is close to an ideal weight. Yet two months ago she was far too stout—was heavier by more than forty pounds! Mrs. Ella Carpenter, New Orleans, explains how she reduced with such success:

I had long wished for some means of reducing my 170 lbs. Being a business woman I had no time nor money to waste on fads, but two months ago I decided to try a method that somehow seemed sensible. The trial didn't cost anything, it required only a week so I gave Wallace reducing records a chance and here is what happened.

'Easiest Thing I Ever Did'

"Fifteen minutes each evening I took the reducing movements—to music! It was uncommonly interesting; I felt better from the start. But I watched my weight, and that is what thrilled me. *I lost 6½ lbs. that first week.* Naturally, I went on with it. The second week I lost 8 lbs. more.

"I didn't do a thing to supplement my course with Wallace—no Turkish baths—no starving, no patent foods or drugs—I just got up to music as the offer said I would. It was deliciously easy. Today, my bathroom scale [illegible] [illegible] for my 5 ft. 5 inches!"

Reduce without punishment; with it any "reduced look!" Proof that you can costs nothing. The trial is *really* free. Coupon brings the full first lesson—record and all—with payment now or on delivery.

Thirty-Sixth Annual Holiday Offer

[illegible] price reductions are made on [illegible] number of publications that [illegible] gift purposes. Among [illegible] future works will be found [illegible] very acceptable gifts to almost any music lover. Among the collection of music will be found desirable gifts for pianists, singers, violinists [illegible]ists. Then there are a number [illegible] priced collections for [illegible] students. Those desiring to add to their own musical library will find it to advantage to make selections from the Holiday Offer and place orders while the low prices are in effect. The Mail Order Service of the Theo. Presser Co. is so well established among music buyers throughout the country that little need be said to assure those who order in good time that delivery will be made promptly. Several advertising pages have been utilized in this issue by the Theo. Presser Co. presenting the opportunities of the Holiday Offer.

Monthly New Music on Sale

This year's demand for the Monthly New Music packages has exceeded our expectations; the October and November installments have been sent out and, from all reports, have given entire satisfaction to those fortunate enough to receive them. There will not be any regular packages sent out during the month of December. Experience has shown that very little teaching music is used or desired around the holiday season. However, if any of our patrons wish a special selection of new issues during this month, a postal card request is all that will be necessary. Do not forget to mention style, grades and number of pupils for whom the music is desired and your order will receive our careful and prompt attention. The next regular installment of "New Music" packages will be forwarded in January, 1925.

Talking Machines and Records, and Radio By Mail

Let this be your Talking Machine Store. Philadelphia is [illegible] the greatest Talking Machine [illegible] of the entire world. It is the [illegible] new ideas, new creations, [illegible]. We have found that this business can be very successfully transacted by mail. It is of especial service to [illegible] away from a real center where the [illegible] stock can be obtained. The g[illegible] works are only a comparatively [illegible] distance from our Chestnut Street e[illegible]ment and we are in constant touch [illegible] the latest thought in the talking m[illegible] world. The combination of the [illegible]ng Machine with Radio is a new [illegible] feature in which thousands [illegible]d. Both of [illegible] ions in one cabinet [illegible]tly. Each has its great purpose [illegible] permanent records are like a wonde[illegible] library; they are like precious books [illegible] can be taken out and read over and [illegible] again. The radio is like a lecture and concert course in your own home. Bot[illegible] an important place and no modern [illegible] complete without them. We can [illegible] you with Brunswick and Victo[illegible] and records. The nature of the [illegible] is such, however, that we cannot [illegible] in this announcement. Just w[illegible] little letter of inquiry and we [illegible] glad to send you information, c[illegible] etc., telling you how we may serve [illegible]. For some time we have been sel[illegible] phonographs by mail-order, with [illegible] success and we have many custom[illegible] distances who buy their records through the Theo. Presser Co.

Calendars For 1925

For a number of years we have been furnishing the music profession with Art Calendars of merit. The large sale these calendars have enjoyed has stimulated us to produce for the coming year, a Calendar [illegible] fine reproduction in color [illegible] musician will occupy the [illegible] cut-out [illegible] of duo tint and directly [illegible] will be printed a short, concise biog[illegible]. There will be sixteen different su[illegible]s, offering a varied selection from [illegible] to choose, particularly for music teachers whose custom it is to present these calendars to pupils as Christmas remembrances. The following music masters will be represented in the series: Bach, Beethoven, Brahms, Chopin, Gounod, Handel, Haydn, Liszt, Mendelssohn, Mozart, Schubert, Schumann, Tschaikowsky, Verdi, Wagner and Weber. These calendars [illegible] effective and inexpensive gifts and [illegible] appeal to all lovers of music. P[illegible] each, 10 cents, or by the dozen, $1.[illegible]

How to Succeed in Singing By Signor A. Buzzi-Peccia

There are many ways to succeed in singing and many ways to fail. A great deal depends upon the individual, but we have never seen any book on the subject which gives so many suggestions of a very practical character as this book by Signor A. Buzzi-Peccia. This celebrated *Maestro di Canto*, famous in Italy and America, friend of Verdi, Puccini, Mascagni, teacher of Alma Gluck, Sophie Braslau, and many noted singers, ought to know how to "Succeed," if anyone does. The money spent upon this book will prove a good investment to any singer. Just now you can have a copy reserved for you at the special advance of publication price of 60 cents, postpaid.

New and Inspiring Christmas Solos

The beautiful effect of the Christmas church services, the singing of traditional carols and inspiring anthems frequently may be enhanced by the introduction of an appropriate solo number. The foremost church soloists exercise great care in their selection of the annual Christmas solo and as publishers we always try to have some new attractive material from which they may choose. This year we have a new song, "The New Born King," by Paul Ambrose, composer of many well-known sacred solos. It is published in two keys; High Voice; range, D to G, and Low Voice; range, B to E. Price, 60 cents. The "Angels' Song," for soprano or tenor, price 60 cents, is another splendid song by this same composer. Other favorite Christmas solos are:

Immanuel ....*Bochau*, 60 cents
There Were Shepherds, High Voice (Violin ad lib.) *Stoughton*, 75 cents
Undimmed Star of Bethlehem, High Voice ....*Neidlinger*, 60 cents
Sing, O Sing, Medium Voice *Risher*, 50 cents
In Old Judea, High and Low Voice (Violin ad lib.) *Geibel*, 60 cents
Nations, Adore, High, Medium or Low Voice ....*Shelley*, 50 cents

These songs and any others in our catalog may be had for examination. Be sure to specify key and range when ordering.

Etude Cover Design Contest

Our contest for a cover design closes December 1st. No designs will be entered after that date. In the designs presented, there is a wide range of subject and skill shown by the artists. Some are obviously the work of beginners who have had no experience or training, whatever, in artistic work. Other drawings show skill, ideas and proficiency. It is literally as impossible for a person who is not gifted to win a prize in competition with an experienced artist as it would be for a student in the first grade to draw a Carnegie Hall audience in competition with Paderewski. We can see that it will be a difficult matter for the judges to make decisions. This will also take time and we ask those who have submitted drawings to be patient until they hear from us.

Peer Gynt Suite, No. 1, For Piano—Four Hands By E. Grieg

The incidental music by Grieg, written for Ibsen's play, *Peer Gynt*, and later arranged by the composer in the form of a Suite, has proven immensely popular. It is already in the *Presser Collection* in piano solo form and we have now in press the arrangement for Four Hands. This latter arrangement is very effective, as it is possible in duet form to give the true orchestral values and some of the tone color. The numbers comprising this suite are: *Morning Mood*, *Anitra's Dance*, *Ase's Death*, and *In the Hall of the Mountain King*. These numbers are not difficult to play, being classed in the upper-intermediate grade.

The special introductory price in advance of publication is 30 cents per copy, postpaid.

Album of Song Transcriptions and Variations for the Pianoforte

We beg to announce for the first time a new volume which should have been undertaken ere this; a collection of popular melodies, arranged within the reach of the average pianist. These popular melodies are always welcome. There are a number of such volumes in existence, but we expect to make one that will be far superior to any yet published because we have a very large collection to draw from, and this is particularly in our line. Some of the pieces will contain transcriptions and some will contain variations, but the line between the two is very thin. Our patrons may look forward to a collection of the very best and most popular arrangements of standard melodies of the day. We will aim, also, to have them arranged in uniform difficulty. The special advance of publication price for this volume is 40 cents, postpaid.

New Orchestra Book

We have in preparation a new orchestra collection suitable for school and college orchestras and for general amateur use. This collection will be made up of standard numbers in part (all in new arrangements) and some new and particularly attractive numbers written and arranged especially for this work. Among the standard numbers will be such pieces as: *Poet and Peasant* and *William Tell Overtures* (in shortened form), *Aïda* and *Tannhauser Marches* (transposed to the most favorable keys). The original numbers will include selections from our catalog of pieces for which there has been a demand in orchestral form. These will comprise marches, concert pieces, slow movements, etc. The instrumentation will be similar to that employed in our *Popular Orchestra Book* and our *Crown Orchestra Book*, *i. e.*, the usual combination of orchestral instruments, together with parts for E flat and B flat saxophones, solo violin and two obbligato violins. The arrangements will be full and rich, but at the same time well within the range of the average student on any of the instruments employed.

The special introductory price in advance of publication is 15 cents for each instrumental part, 30 cents for the piano part, postpaid.

Capriccio Brillante For the Pianoforte By F. Mendelssohn

The piano music of Mendelssohn is more than holding its own, as a matter of fact, much of it is growing in popularity due to a revulsion from the efforts of some of the ultra modern writers. Works of Mendelssohn are to-day appearing upon the programs of many great artists. Some time ago we added to the *Presser Collection*, the "Concerto in G Minor," by Mendelssohn, which is one of the most popular with students. About equally popular is the *Capriccio Brillante in B Minor, Opus, 22.* This number will also be added to the *Presser Collection*. It is shorter than the Concerto and somewhat less difficult, but it is brilliant throughout and extremely tuneful. The *March* from the *Capriccio*, is often played as a separate number. The *Capriccio* as a whole, may be played with the accompaniment of a second piano or with orchestra, but the accompaniment is so light that the entire number may be played as a piano solo, if desired.

The special introductory price in advance of publication is 30 cents per copy, postpaid.

Ruth, Sacred Cantata For Women's Voices By Paul Bliss

In this attractive cantata the Biblical story of "Ruth" is told in short recitations, two solos, and number of choruses, which may be sung as three-part by omitting the second alto. The usefulness of a work of this sort is apparent. It is appropriate at any time; it requires about a half hour in rendition which makes it suitable for a vesper service. The subject treated renders it of use to any body of singers. Women's colleges and schools, as well as choirs where men's voices are absent, or not dependable, will welcome the work. The constant requests for works of this sort leads us to believe that this original writing will take its place in all better class choir and chorus libraries. In advance of publication this cantata may be had for 25 cents, postpaid. One copy only to each subscriber.

Jolly Jingles For Little Fingers By Helen L. Cramm

The new work, *Jolly Jingles for Little Fingers*, is in its author's best style. One cannot have too many publications of this nature, so many are needed in the early grades. Miss Cramm has always something good to say. In addition to their attractive qualities for young folks, good teaching material is to be found in every one of her pieces. This new book cannot fail to please.

The special introductory price in advance of publication is 30 cents per copy, postpaid.

Day Before Yesterday
Operetta for Children
By Cynthia Dodge

Tinkling tunes and charmingly catchy ones come from Cynthia Dodge. She has chosen History for her musical illumination in this work and she actually opens the pages of the past and out step queer, quaint characters who tell us how absurd we are. For forty minutes we follow the finger of Time, and always with smiles, because it is a very clever and pretty story. The contrasts are strong and accentuate the situations so the audience is held interested throughout. Sketches in costume of all characters are included in the score together with directions for staging, which are very easily managed. The music is for the voices in unison and very easily memorized. Our advance of publication price for one copy only, is 40 cents, postpaid.

Dawn of Spring
Cantata for Two Part Chorus of Treble Voices
By Richard Kountz

If you have heard Mr. Kountz' very popular song, "Sleepy Hollow Tun[illegible]," you know his gift of melody, and in th[illegible] short cantata, which requires twenty-fi[illegible] minutes for rendition, we assure you [illegible]at you will find melody and then more melody, and that easy flow of the voice par[illegible] which attracts singers and hearers alike. This work is finely adapted for use in women's club programs and it is easy enough to be given by pupils of the upper grades in schools. T[illegible]ory in the tex[illegible] is about what happe[illegible] Nature during a whole day in the s[illegible]ng from daylight through the following [illegible]ht until the ri[illegible]g of the sun. The char[illegible] of the work is irresistible and, while educational it is mo[illegible] attractive. The examination of a copy will hold your attention. The advance of publication price [illegible] one copy on[illegible] is 30 cents, postpaid.

Vision of Deborah
Sacred Cantata for Mixed Voices
By Richard K[illegible]eserling

This is a Sacred Cantata that may be given at any time of the year. It is big enough to inter[illegible] the best choruses and while it requires many rehearsal[illegible] it is worthy study and we recommend it to the attention of all choir-masters of serious intent. The solos are most grateful to the singers, and the choruses, with Oriental flavor in the musical treatment, maintain an atmosphere which compels attention to the end. The dramatic story is taken from the Old Testament and follows the Biblical text faithfully. There are very few such works in existence—not too long, full of contrasts, and alive with melody. An examination of this work will prove most interesting and we suggest to choir-masters and choral directors, that they obtain a copy while it may be had at the special advance of publication price, 30 cents, postpaid, for one copy only.

Rhythms For Young People
By Blanche Fox Steenman

This book is now on the press and this may be the last month of the special introductory offer. The book is intended primarily as a work on musical appreciation for public school students; to interest them first of all through their rhythmic perceptions and thus to introduce them to the works of the best composers. This volume contains nearly seventy separate numbers selected from the works of various writers from Bach right up to the present. Some of the pieces are in their original forms, others are arranged or transcribed, so as to make them more playable for the average performer. Some of the pieces are intended to be played to the students and commented upon, others are to be acted out rhythmically at the discretion of the teacher. In the Alphabetical Index the record numbers for the various talking machine disks are given in the case of many of the better known pieces. In the Table of Contents interpretative hints are [illegible] for each pie[illegible] in order to give [illegible]

Cleopatra—[illegible]era Burlesque of College L[illegible]—Book and Music
By John W[illegible] B[illegible]gham

This is one [illegible] best productions for college or high school under-graduates that we have seen. It is a musical farce to be done en[illegible] by men and the whole work is full of [illegible] natured fun-making. The lines are [illegible] clever throughout and the music is br[illegible] and sparkling. Some of it is original and portions are adaptation. Much of the fun is of the knock-about character, just the sort of thing in which the scholastic athlete delights to engage. The work is easily staged and costumed.

The special introductory price in advance of publication is 40 cents per copy, postpaid.

Barbarossa of Barbary
A Musical Comedy in Two Acts
Music By David Britton

An Original Musical Play, for young people, having exceptionally attractive material for an entire evening's entertainment. The music is catchy and sounds big, although it is not difficult to memorize nor to render. Miss Frances Bennett, who wrote the book, has produced a charming, witty story with lots of funny situations, all of which can be easily handled by amateurs and the tunefulness of Mr. Britton's music will appeal to both audience and performers. The stage business is fully described in the stage-manager's guide, which also contains cuts of the characters in costume. The advance of publication price for one copy only is 40 cents, postpaid.

Eleven Indian Love Songs
For Three-Part Chorus of Women's Voices
By Thurlow Lieurance

Mr. Lieurance tells us that this work is primarily intended for high school choruses. It will prove equally acceptable to musical clubs in general, however. There [illegible]ways room on a program for one or more good Indian numbers and these particular arrangements are made from [illegible] Mr. Lieurance's most successful songs. They are all taken from genuine Indian sources. These arrangements [illegible]all effective and none are difficult [illegible] execution.

The special introductory price in advance [illegible] publication is 30 cents per copy, postpaid.

Reverie Album
For the Piano

We have two very successful publications in our catalog, entitled respectively, *Tranquil Hours* and *Sunday Piano Music*. Our new *Reverie Album* will be somewhat similar in character to both of the above mentioned. It will contain pieces of the quieter and more contemplative type, suitable for home playing and for use also at devotional meetings in places where the piano may be used. Some of the pieces are rather ornate in character and in spite of the title of the selection, there is much variety in the book. Modern composers are represented chiefly, but there are also some selections from classic and standard writers. The pieces are of intermediate difficulty.

The special introductory price in advance of publication is 35 cents per copy, pos[illegible]

New Anthem Book

This [illegible] be one of the series of popular anthem books containing seventy-[illegible] pages of anthems of a popular order, something similar to one of our series entitled "Vo[illegible] Choir." The success of this series has been marvelous, not only on account of its reasonable price, but on account of [illegible] usefulness of the material, and we [illegible]pose to make this new anthem book [illegible] valuable than any previous one, as we have a large collection from which [illegible]elect. There is absolutely no risk to [illegible] by ch[illegible] leaders, or anyone else inte[illegible] in church music, [illegible] ne [illegible]book. They [illegible]

Little Folks' Music Story Book
By James Francis Cooke

There is a great fascination about music history even for little children. This new work is designed as a music history far easier and far simpler than any previous book on the subject and is intended for very little children indeed. The play principle is introduced since the pictures themselves are not printed in the book, but on separate sheets ready to be cut out by the child and pasted in the book. The work is sure to have a very large sale judging from the number of teachers who have ordered copies in advance and thus availed themselves of the special pre-publication price of 50 cents, postpaid.

What to Play—
What to Teach
By Harriette Brower

Miss Brower's book has reached the "page proof" stage. That means that it is upon the threshold of publication. It does not take long to print and bind a book when it gets that far. We are rushing it ahead with all proper speed. The [illegible] of this book is to give the student and the teacher a wide range of pieces employed upon the programs of the best artists and in the leading conservatories. These lists of pieces are arranged in [illegible] form so that the readers may learn how program makers arrange compositions in the proper order, that the effect upon the listener may be more impressive. The advance of publication price of this [illegible] and helpful work is [illegible]5 cents, postpaid.

The Music Scrap Book
By N. Louise Wright

S[illegible]y young pupils are presenting themselves for instruction these days [illegible] in many cases, it is necessary to have something still more elementary than even the usual instruction book. [illegible] that one must have some[illegible] kindergarten book. It is such a need as this that Miss N. Louise Wright's *Music Scrap Book*, is designed to fill. It may be described as a series of musical object lessons in notation, in keyboard knowledge and in fingering. Note values are taught without the necessity of a knowledge of fractions and the names of the keys are taught in connection with the names on the staff. The material is all attractive.

The special introductory price in advance of publication is 30 cents per copy, postpaid.

Six Study Pieces in Thirds
For the Piano
By Carl Moter

This is an excellent contribution to the literature of the double-note technic. Scales in double thirds are always good to practice, but this is not sufficient: they must be given practical application in either pieces or studies. Carl Moter's *Six Study Pieces* serve to exemplify very pleasingly and in various contrasted styles, the use of thirds in the intermediate stages. There are too few study books of this character.

The special introductory price in advance of publication is 25 cents per copy, postpaid.

Little Suite for Two Violins in the First Position
By Arthur Hartman, Op. [illegible]

This Little Suite for Two Violins in the First Position is a most interesting and ingenious work for the young violin student. The composer is one of the foremost American concert violinists of the present day, and with his experience in composing, editing and transcribing other important publications for the Theo. Presser Co., it is not surprising that he should write such a useful and comprehensive work in such a simple way. For although this Suite is all in first position, and not difficult by any means, it takes the pupil through varied finger and bow exercises. It will prove very interesting to the pupil who likes to have his teacher "play along with him." The special introductory price in advance of publica[illegible]

An Important
New Work

THEORY
AND
COMPOSITION
OF
MUSIC

By PRESTON WARE OREM

The Logical Sequel to
His Immensely Successful
"Harmony Book for Beginners"

Thousands of teachers and self-help students who have used "Orem's Harmony" requested a book with which they could continue in this pleasant and profitable method. The result of their demands is this excellent work. The student is led immediately into creative work, making practical application of all knowledge [illegible] learning everything [illegible] ordinary course in harmony [illegible], including modulation and a good working knowledge of musical form.

PRICE, $1.25

BASIC PRINCIPLES
IN PIANOFORTE PLAYING

By Josef Lhévinne PRICE, 60 CENTS

Josef Lhévinne, one of the greatest authorities of the present day [illegible] pianoforte technic and interpretation, presents in this volume some vital principles that should be studied by every teacher and student. The whole subject is presented in a clear, simple manner and a careful following of the advice given should bring beauty and charm to one's playing.

ALBUM OF SCALES
Study Pieces for Special Purposes
Vol. 2

PRICE, 75 CENTS

This is the second volume published in the new series Study Pieces for Special Purposes. The first volume, *Album of Trills*, was an immediate success and has been adopted by many teachers who recognize the superior value of interesting study pieces over dry, technical exercises. The pieces in this album are all calculated to give the student plenty of scale work, at the same time furnishing through their musical qualities an incentive for the student to practice.

THEO. PRESSER CO., Phila., Pa.

[illegible]STNUT STREET

[illegible]ieces for the Development [illegible] Technic

[illegible]y N. Louise Wright

This work, by Miss Wright, an experienced teacher, is a condensed book of technic, always very useful to have with certain pupils. Every teacher has occasion at times to use a short review with a pupil, and this little work will come in good play with that class of pupils who need just a short boost to bring them back to where they were.

It deals with various forms of technic: scales, arpeggios, etc., and all of the pieces are of medium difficulty.

As the work has been in the hands of the engravers for some time, it will not be long before it is on the market. The special advance of publication price of this useful book is 25 cents, postpaid.

Ten Busy Fingers

By Mabel Madison Watson

Miss Mabel Madison Watson is a successful teacher and writer who specializes in strictly modern methods. Her books have proven very popular. In *Ten Busy* [illegible] acquainted with rhythms, with finger efficiency, independence of hands and keyboard geography. Various more or less familiar verses are used in order to give character to the pieces and to bring out the rhythms. This book may be used to the best advantage in early second grade work.

The special introductory price in advance of publication is 25 cents per copy, postpaid.

Schubert Album For the Pianoforte

Our new Schubert Album will contain some of the finest gems from the works of this most prolific and melodious writer. It will not be restricted merely to his piano pieces, but in addition to some of the best known piano solos and excerpts from others, it will also contain transcriptions of some of his favorite songs and arrangements from some of his orchestral works. In point of difficulty it will be an intermediate grade album. This will be different from any other Schubert compilation.

The special introductory price in advance of publication is 35 cents per copy, postpaid.

The Cat Concert

By Russell Snively Gilbert

This will be the final month of the special offer on this entertaining little book of teaching pieces. Recreation pieces of easy grade having the picturesque quality are always attractive to young students. Since the pieces are well constructed they will be found to have many good teaching points. In addition, each little piece has an illustration at the head in black and white, thus adding further to its attractiveness.

The special introductory price in advance of publication is 35 cents per copy, postpaid.

Reflections for Music Students

By Sidney Silber

This book of pithy paragraphs upon practical pianoforte playing and upon music study written by a Chicago teacher-pianist with a very large class is now being printed. It is only a little time before the copies will be in the hands of those who have had the foresight to grasp the opportunity to obtain them at the special advance of publication price. Send us 50 cents to-day and be among the first to get a copy when it is printed.

Album of Arpeggios for the Pianoforte

This volume is well along toward completion, but we are continuing the special advance offer during the present month.

This is the third book in the series, "Study Pieces for Special Purposes," and the two volumes which we have already issued have met with great favor among our patrons. The one for arpeggios will be along similar lines, and we might say in this connection, th[illegible] is yo[illegible] [illegible] the most im[illegible] [illegible]nyone will take [illegible] a miscellaneous lot of music, he will find that there are more arpeggios than any other department of technic. There is scarcely a piece that does not have arpeggios in some form. This comes about especially, because it is the basis of harmony. So you will find that this volume of arpeggios will be the most important of the entire series.

Our special price on this book will be 30 cents, postpaid.

Musical Moments For the Pianoforte

By Mrs. H. B. Hudson

This is a volume of recreation pieces, both original and selected, arranged in an easy playable manner for first grade pupils. Most of the pieces are in solo form but a few are for four-hands. These pieces are in the regular musical notation, not in the A-B-C style as are so many of Mrs. Hudson's books. This work will supplement very satisfactorily any instruction book or elementary course.

The special introductory price in advance of publication is 35 cents per copy, postpaid.

Advance of Publication Offers Withdrawn

The November issue of THE ETUDE carried under the Publisher's Notes for the last time the special advance of publication offers on "The Cross-Patch Fairies," a Christmas operetta by Norwood Dale and "Notturno," a musical romance by Carl Schmidt. "The Cross-Patch Fairies" is a Christmas play with music for little folks. The music is tuneful and sprightly and safely within the range of children's voices. The story will be found interesting and those who desire a Christmas operetta for this year should secure a copy. Those having already selected an operetta for this year should keep this in mind for next year. The price is 60 cents a copy. "Notturno" is a very interesting story from a purely fiction standpoint, but it will appeal specially to the music lover since it treats with the developments of a woman's musical nature through the influence of a musical composition. The new Theo. Presser Co. edition of "Notturno" is priced at $1.50 per copy.

"Etude" Binders Preserve Copies

You paid $2.00 for the ETUDE during the year. Are your copies so arranged that you can place your hand on any one that you may wish? Thousands have told us that the ETUDE is worth many times the subscription price of $2.00. Here's your opportunity to keep the entire 12 issues in a fine buckram binder, stamped in gold on back and sides, "THE ETUDE." It opens flat, and you will be surprised at the convenience, to say nothing of preserving copies fresh and neat for all time. The retail price is $2.25, and a mighty big bargain at that.

If you will send us your renewal for the coming year, and a personal check or money order for $3.25, we will take pleasure in mailing the binder to you. This is the best way to start a permanent musical library of which you will be very proud in the future.

Remember, $2.00 covers your renewal, plus $1.25, the manufacturing cost of the binder, $3.25 in all, and you will have made a mighty good investment.

Warning

We cannot be responsible where dishonest canvassers claiming to represent us take subscriptions for ETUDE MUSIC MAGAZINE. Pay no money to anyone not personally known to you, no matter how plausible the story. Ninety-nine times out of one hundred, the poor boy working his way through college, or the ex-service man trying to make a living are fakes pure and simple. If the story appears to be honest, tell the canvasser to let you sign the order, but return it direct to us with the money. If the canvasser is responsible, he will have no objection to your doing this because he knows he will get his commission.

World of Music

(Continued from page 865)

"Nerone," which was given so successfully towards the close of the last season of the La Scala of Milan is to be the attraction at the opening night, November 25th, of that theater, which is so rich in its musical traditions.

The Society for the Publication of American Music, one of the main purposes of which is to foster the production of those higher forms of composition for which the market is so limited as to make them unattractive ventures for the general publisher, has brought out two notable works in the form of a *Suite Antique for Two Violins and Piano*, by Albert Stoessel, and a *Sonata for Violin and Piano*, by David Stanley Smith.

The American Violin Makers held their first convention in New York on October 18th. On the 19th they held a violin contest recital at Aeolian Hall, with an American Violin pitted against a Stradivarius. The aim of the society is to create the highest possible grade of American violins.

Leonora Cortez, the young Philadelphia pianist, made her Berlin début early in October, with encouraging success. The *Vossische Zeitung* says, "She is one of the most genuine piano talents we have experienced in a long time."

Frank van der Stucken, first conductor of the Cincinnati Symphony Orchestra, and successor of Theodore Thomas as conductor of the May Festival, recently celebrated his sixty-fifth birthday in Cincinnati.

Mascagni's Spectacular Revival of "Aida" in Berlin, which engaged one thousand participants, had to be discontinued after a few performances, for lack of patronage. A similar attempt in Vienna, earlier in the season, ended disastrously, partly because of unfavorable weather.

The New York Police Department Band, conducted by Patrolman Paul Hanneberg, has won the first prize in a band contest at the State Fair held at Syracuse.

The Boston Symphony Orchestra will this year give its fortieth season of concerts in New York City.

A $100,000 Stadium for Atlanta for the production of open-air opera is to be ready for use for the next summer season.

Jenny Lind is to have a statue to her memory, in Battery Park, New York, erected by the Jenny Lind Association. It will be in the historic costume of her period. Aside from busts in the Hall of Fame, she is to be the only woman so honored in that city except Joan of Arc. She will also be the sixth musician; Beethoven, Mozart, Weber, Grieg and Verdi being the others. The statue will be dedicated October 6th, 1925, her one-hundred-and-fifth birthday, and less than a month after the seventy-fifth anniversary of her New York début on September 11th, 1850.

Puccini has asked Gigli to create the leading tenor rôle of his latest opera, "Turandot," at the La Scala of Milan next spring.

Dr. J. Fred Wolle, founder and director of the Bethlehem Bach Choir and Festival, and one of the leading Bach interpreters of the world, we are glad to report is steadily regaining his health. Preparations are now under way for resuming rehearsals so as to have the usual Bach Festival in 1925, the 1924 performances having been prevented by the sudden affliction of Dr. Wolle.

Carl Busch has been honored with a second recognition of his accomplishments in the world of music, by receiving the decoration of the Royal Norwegian Order of St. Olaf, from King Haakon VII of Norway. Some years ago he was knighted by the ruler of Denmark, his native country.

Home for Retired Music Teachers

Social activities at the Presser Home for Retired Music Teachers in Germantown were resumed in October. Mrs. M. K. S. Smith, Secretary of the Presser Home Social Club, reports:

The opening meeting, October 23d, proved to be one of pronounced interest. Following a short musical program by home talent the subject of "Great Truths by Great Men," opened by a member of the Club, was ably discussed by Mr. Phillips, Mr. Colby, and other guests of Germantown.

This departure from the usual entertainment was most acceptable and held close attention throughout.

The capacity of the House will be greatly enlarged on completion of alterations now in process, in a building on the premises, for the help employed.

On Hallowe'en a sociable and entertainment was given in the Home in which many of the residents took active part—several in fancy dress costumes.

In addition to the radio receiving set, in operation, the Home has acquired a fine Victrola. There is as yet a small library of records. It has occurred to us that readers of THE ETUDE have records of good musical compositions that they might want to dispose of for some reason. The Home will welcome gifts of records for its library. This will bring cheer and happiness to many. Never [illegible] away. Any local phonog[illegible]
